Robert Steele: My Student Earns Top National Prize in India for Institutionalising Open Source Intelligence (OSINT) in India: An Analysis Plus Link to 44 Answers on OSINT for India	182

Preface

In November of 2020 I received a polite professional email from a law student in India. I found his questions to be intelligent, and his integrity in coming to me for answers – in sharp contrast to those who vary between stealing my work without attribution, or ignoring my decades of pioneering because it is more profitable for them to lie, cheat, steal, and not deliver holistic analytics with true cost economics and Open Source Everything Engineering (OSEE) opportunity costs and benefits embedded.

Dedication

I dedicate this publication, which was requested by this individual as a momento and in support of his winning thesis, to

AMIY KRISHNA

Answers on OSINT for India 1

China has been mining Open Source Info of its major adversaries, namely, the US, India and the Europe. The latest Zhenhua leaks confirm this. Very little information is available over the methodology it adopts. Please guide on how China does it?

China, like Japan, is good at collection and very poor at processing and sense-making. They are also making the same mistake the Americans continue to make, and not fully exploiting all humans in all languages and walks of life. Below is a core graphic: OSINT is HUMINT not TECHINT, anyone that does not get that is stupid or corrupt or both.

They do not have a strategic analytic model for holistic (all threats, all policies, all challengers) and true cost economics or they would be doing many things differently. Here is my model focused on addressing all preconditions of revolution to achieve peace and prosperity for all.

	Political- Legal	Socio- Economic	Ideo- Cultural	Techno- Demographic	Natural- Geographic

Complexity	History of India India India	History of India India India	History of India India India	History of India India India	History of India India India

If India adopts my vision it will give India a strategic advantage in relation to China, Russia, Pakistan, Iran, and the regions where India wishes to work. I would add that no matter how good India might get at

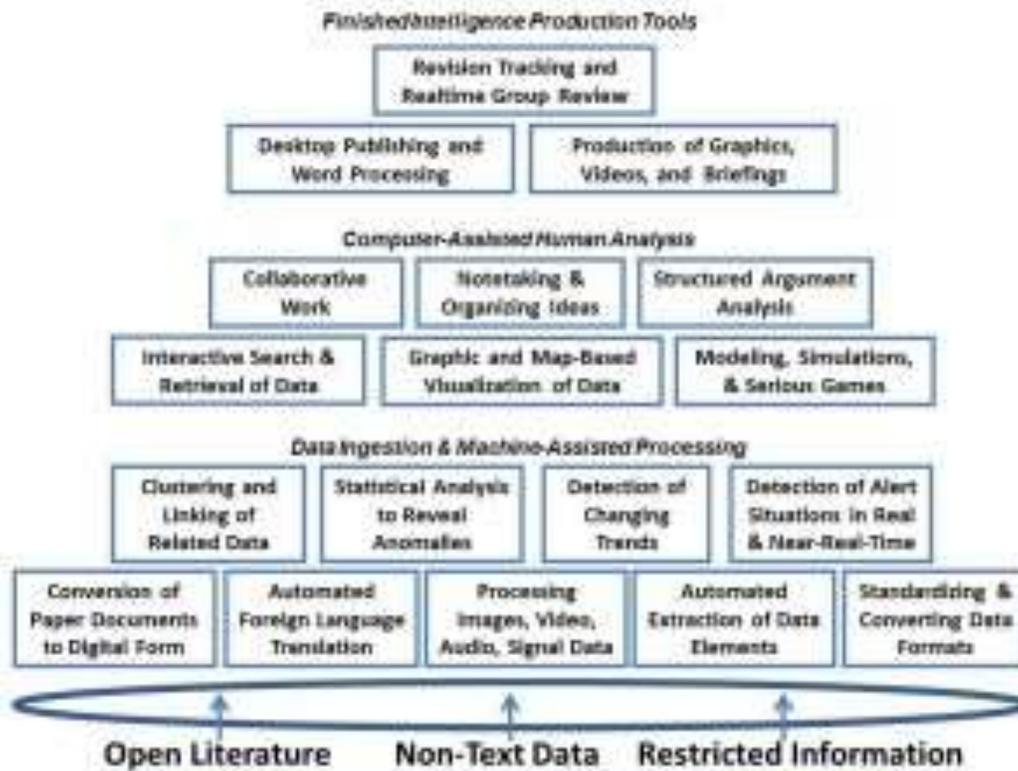

OSINT, if they do not flush the Zionist parasites out of Modi's office and do constant deep counterintelligence against foreign countries including UK (captured by Israel) and Israel in all its forms including the Red Mafiya Russian-Israeli-US criminal network, then India will never be in the top tier for intelligence. Good secret intelligence demands OSINT on one side and ruthless A level counterintelligence on the other that includes a complete cleansing of the Prime Minister's office as well as Parliament at both the national and the provincial levels.

Sir, the baseball match depiction of how OSINT is connected to to other methods of intelligence collection is good but an average Indian user may not connect to it prima facie as the game is not played in India. Can I suitably modify it and show the relation by replacing baseball with cricket?

Yes, naturally, I would be glad to see and post this when you have it.

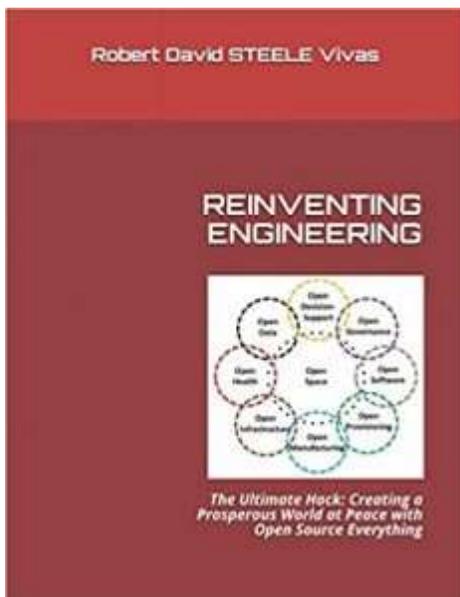

Which software do you use to make the diagrams and graphs? I use LibreOffice and Inkscape (both are open source) but their UI is confusing. I would be thankful for your kind help.

I use Microsoft Powerpoint for now but am planning to abandon Microsoft as they have been captured by the Zionists and now have "hate speech" prohibitions in their terms of reference, which is code for giving the ADL penetration of Microsoft the right to terminate my use of Microsoft over my truthful commentaries on Zionists (never to be confused with Jews). I may be about to start the Web 3.0 project, creating a proper and full extension of Libre Office to handle all eighteen of the needed integrated desktop capabilities pictured in the attachment and the below link, is part of our early development. It would be interesting if India were to agree to host and fund and provide personnel for creating Web 3.0, the only thing is that we envision a project that slams the door on NSA and MI-6 and the Mossad, shuts out all Zionist coders, provides full documentation for every line of code along with a Computation-Algorithm Quality Assurance Centre, and includes data at rest encryption.

As previously stated, India is welcome to translate my three most recent books at no cost:

As a side note I emphasize the centrality of the military to create global information operations that emphasize both open and secret sharing and multinational sense-making. Each country has eight information tribes. If I were to create a US Open Source Agency, the below would be immediately implemented at Fort McNair with nodes at key foreign locations (India would be at the top of my list along with Ecuador and Singapore) and within the USA at Dam Neck for NATO/ATC/2nd Fleet and in Tampa for SOCOM/CINCs.

Answers on OSINT for India 2 – OSINT & Technical vs. OSINT & Analytical

Sir,

I have noticed one particular characteristic of OSINT which is that any OSINT process involves two actions, namely, intelligence collection and then intelligence analysis. I have observed that OSINT collection process is technical and requires thorough understanding of different technologies, softwares and methodologies while intelligence analysis depends more upon the analyst's judgment.

This brings us to breaking OSINT into two components- the technical one that relates with collection of OSINT and the non-technical one relating to analysis. Can this be depicted with the help of the following diagram?

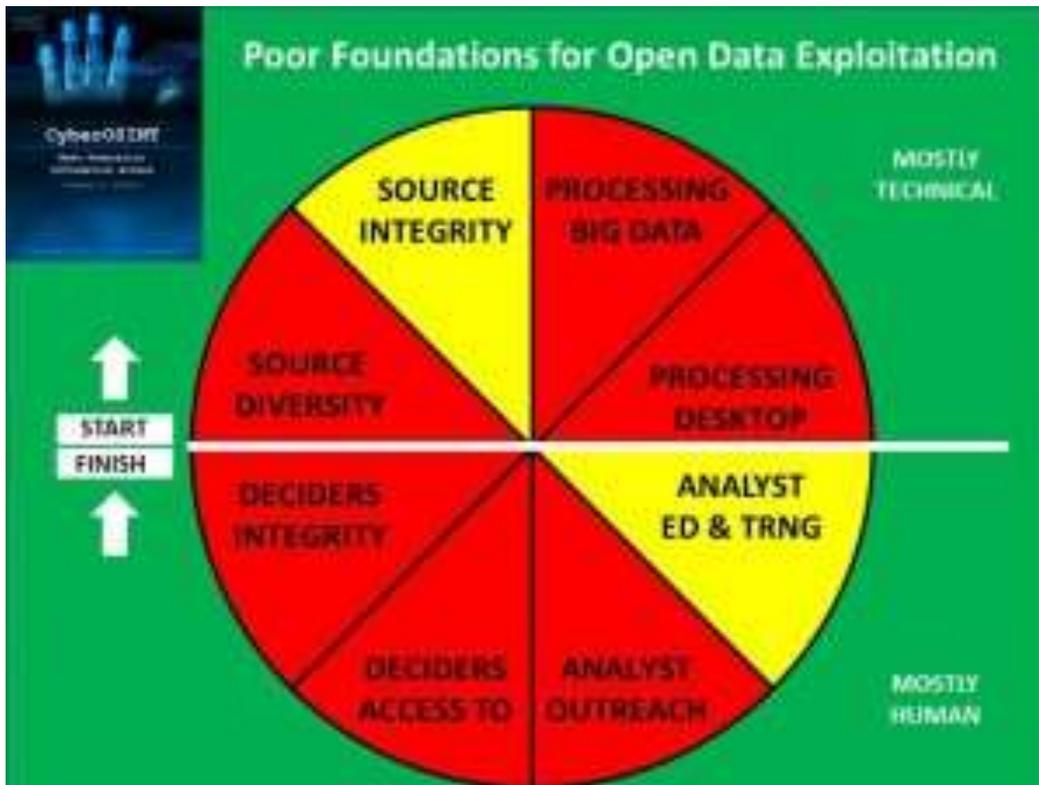

Dear Colleague,

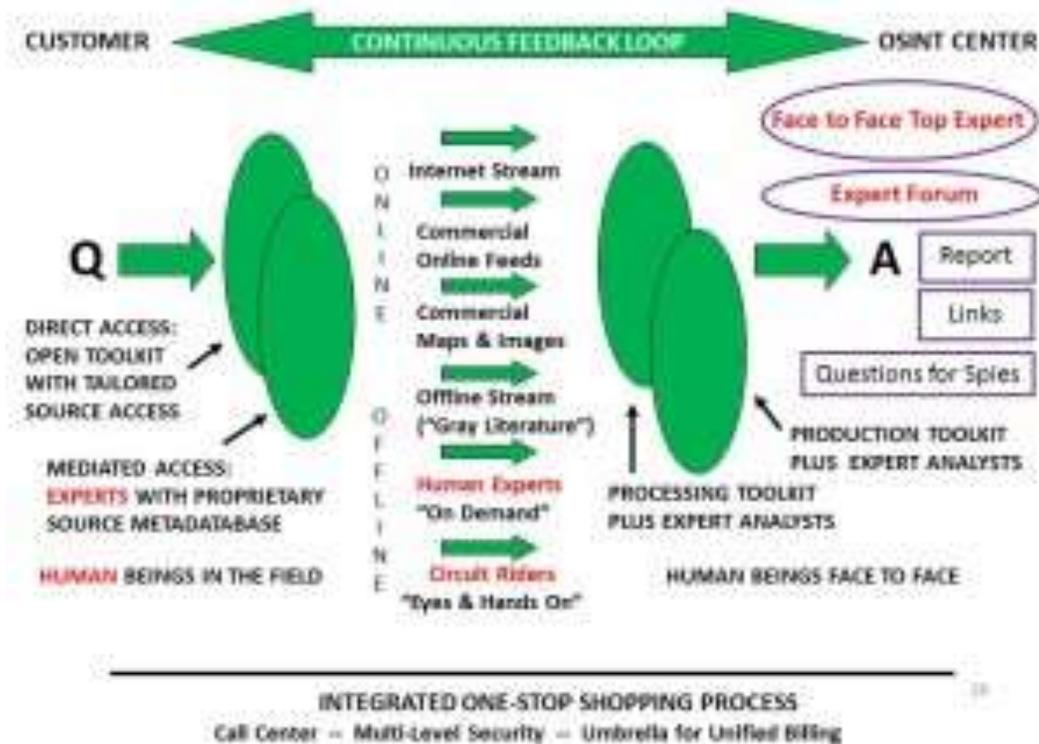

OSINT is HUMINT. The Americans pursuing OSINT via social media are both stupid and corrupt — like the drunk looking for the car keys under the street light because that is where the light is. The Americans are also lazy and lack deep cultural knowledge in part because they default to US citizens with clearances. For example, there are roughly 1,400 top notch Muslim professors in the USA, the last time I looked CIA was taking to 14 of them and none outside the USA. They are not willing to engage with hundreds of thousands of human sources and are making a complete mess of all fifteen slices of HUMINT/OSINT as depicted below:

OSINT is not technical. It is human. On the right side of your graphic, I like much of what you have here. At root we have eight deficiencies that apply to technical collection and human collection, processing, and analysis.

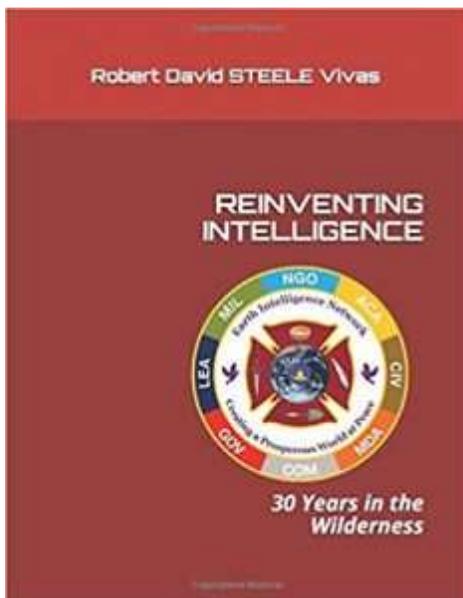

This is the end to end process for dealing with OSINT:

Please note that the process starts with a QUESTION. The US secret intelligence community is shit in part because they don't do requirements definition with clients who need to make a decision. They are still trapped in the *collect what you can collect*, never mind whether it could be collected more inexpensively with OSINT or whether we already have it — FIND if you already have it; GET from someone you know; BUY from commercial providers; STEAL only if you must.

You really should buy and read the below, I don't have time to repeat 30 years thinking just to bring you along.

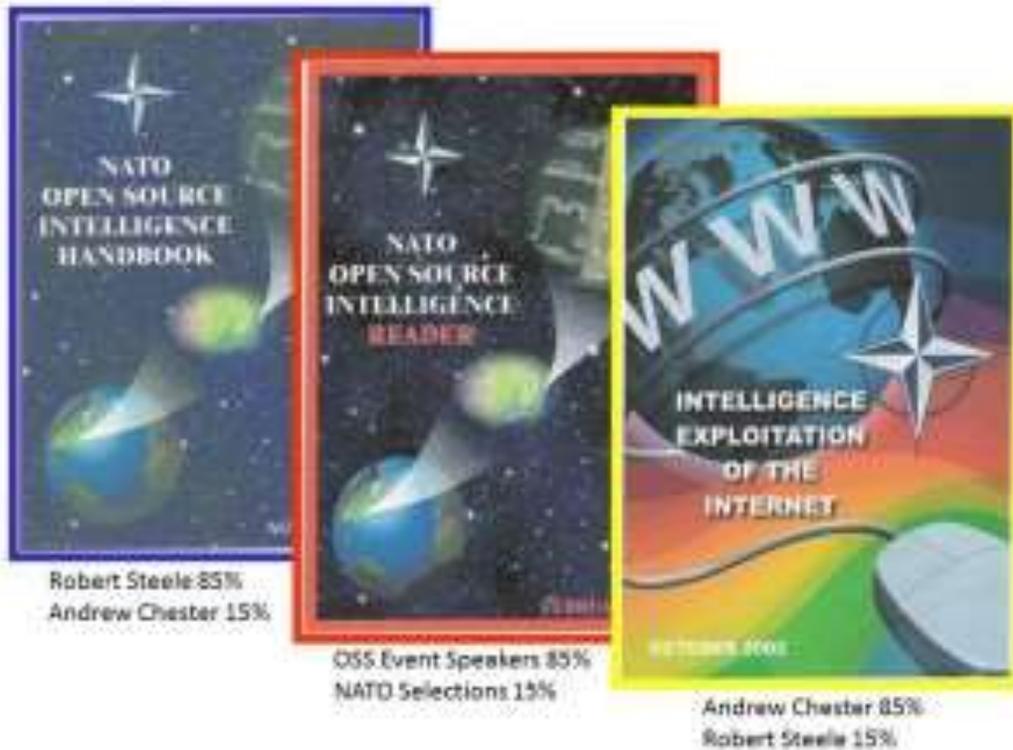

PRINT: Steele, Robert, [REINVENTING INTELLIGENCE: 30 Years in the Wilderness \(Trump Revolution 46\)](#) (Amazon CreateSpace, Earth Intelligence Network, 2019).

KINDLE: Steele, Robert, [REINVENTING INTELLIGENCE: 30 Years in the Wilderness \(Trump Revolution Book 46\)](#) (Amazon Kindle, Earth Intelligence Network, December 2019).

FREE ONLINE: None; individual items online.

You should also download and read the NATO OSINT series, although seriously outdated the Handbook is still the best around for strategic orientation.

Answers on OSINT for India 3 – OSINT & Denied Areas

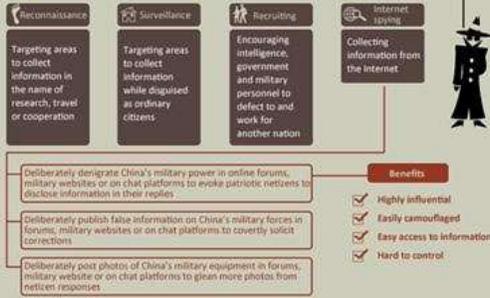

Sir, kindly guide on –

- 1- How can OSINT ops be successively conducted on closed information states like China or North Korea? (Attaching a file I had downloaded)
- 2- Is the information that China generally makes public through its state-run agencies reliable and sufficient?
- 3- Is there any research paper or unclassified information over the organisations collecting OSINT for China?
- 4- Please suggest sources on the Military Uses of OSINT.

Questions repeated & answered after graphic.

Peeking in China: Spying targets and tactics

Regular missions

Targeted information

Disguises

	Diplomatic personnel Wang Qingjian, a Senior Colonel of the PLA General Political Department who worked in Chinese Embassy in Japan, was prosecuted in 2006 for helping Japan monitor ambassadors and military officers.
	Government staff Cai Xiaohong, a British spy, lurked in Hong Kong for more than 10 years as secretary general of the Liaison Office of the Central People's Government in Hong Kong before being sentenced to prison in 2003.
	Scientific researchers Rue Feng, a Chinese-American scientist, was sentenced to eight years imprisonment for selling oil industry data to the US in 2007.
	Scholars Lu Binshu, an academician of the Chinese Academy of Social Sciences who worked for intelligence department of the US, Russia, Japan, South Korea and China's Taiwan, was sentenced to 20 years imprisonment in 2006.
	Ordinary citizens A couple from Canada, who ran Peter's Coffee House in Dandong, north China's Liaoning Province, was suspected of collecting and stealing information related to Chinese "military and national defense research" in August, 2014.

Arrests

	Exemption Diplomatic personnel is often asked to leave the country		Judgment Intentionally or negligently divulges State secrets Up to 7 years imprisonment Stealing, purchasing or illegally obtaining military secrets 5 - 10 years imprisonment 10 or more under extreme circumstances Stealing, spying or purchasing military secrets for agencies, organizations or individuals outside China 10 or more years imprisonment/life imprisonment/death
	Exchange Two countries may exchange seized spies in a third country		

Anti-espionage

- Legislation**
China considered renaming its National Security Law as the Counter-Espionage Law in August, 2014.
- Report**
China's National Administration for the Protection of State Secrets posted an announcement on its official website in April encouraging citizens to report incidents of internet spying to the government.
- Citizen vigilance**
A self-published handbook that teaches counter-espionage tactics to Chinese citizens has become popular on the Internet.

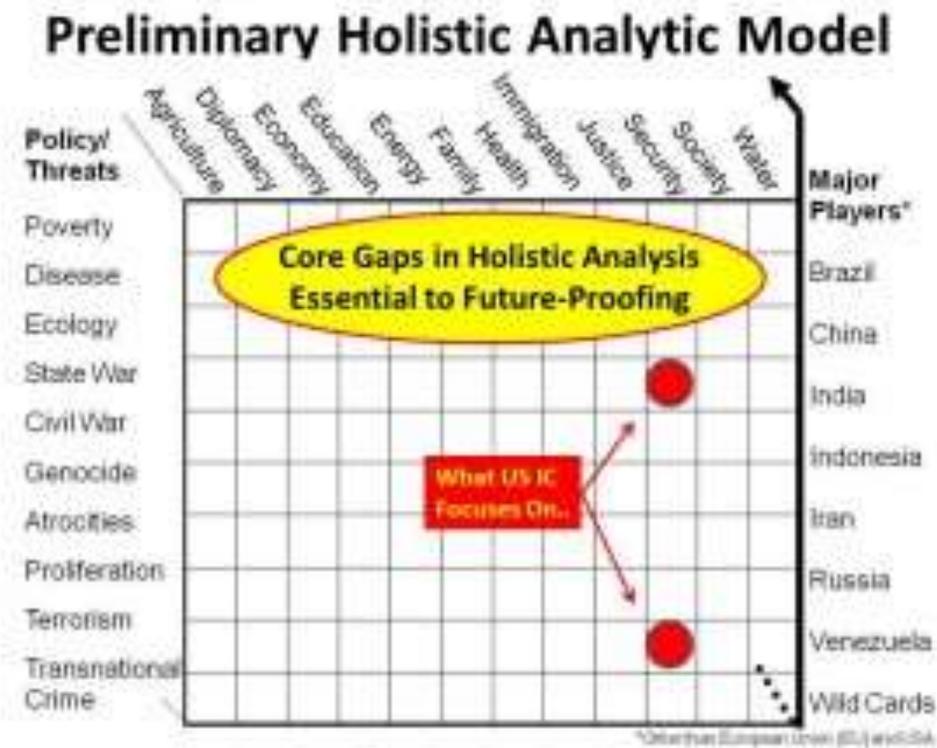

Source: Beijing Youth Daily, Xinhua, qq.com, huanqiu.com, sina.com
Graphics: Yang Ruoyu/Globaltimes.cn

1- How can OSINT ops be successively conducted on closed information states like China or North Korea? (Graphic provided)

There is no such thing as a closed state. Information does not recognize national boundaries. The problem is that secret intelligence agencies are lazy and unwilling to do the hard work of foreign language OSINT. Some of CIA's greatest successes within the Office of Scientific & Weapons Research (OSWR) under Dr. Gordon Oehler came from reading the open Soviet technical literature and carefully mapping relationships among authors. If you combine OSINT with mathematics, I believe you can get to no less than 80% of what you need, and more often than not, 90-95%.

Part of the problem is the tendency to avoid holistic analytics and true cost economics. Below is a table of the top ten threats to humanity and the top twelve policies (and related budgets) that we should be studying for all countries.

Any intelligence community that is not willing to focus on decision support (in the USA we focus on really stupid shit like regime change, drone assassinations, and rendition & torture) spanning all threats, all policies, all challenges, will inevitably not be worth what we pay for it. Consider this:

USA \$75B/Year = 4% "At Best"

80% of what I needed to know as CINCENT I got from open sources rather than classified reporting. And within the remaining 20%, if I knew what to look for, I found another 16%. At the end of it all, classified intelligence provided me, at best, with 4% of my command knowledge.

Now compare General Zinni's finding with the valuation for OSINT that I provided you in Answers on OSINT for Official in India 2 and consider also the fifteen slices of HUMINT-OSINT, among whom the most important are subject matter experts including legal travelers. Now look at the eight tribes of information that no country properly exploits:

In my experience each country is exploiting less than 5% of what it already knows through these eight tribes of its own, and virtually nothing from the same tribes in all other countries, friendly, neutral, and hostile. Now look at the Multinational Decision Support Centre (MDSC) graphic in Answers for Official in India 2. Given the right combination of collaborative countries, there is nothing about Pakistan (or India) that I cannot get to — or China or Iran or Russia. Our greatest challenge is not other states, our greatest challenge is the criminal enterprises known as the City of London and Wall Street, and the secret societies that integrate white and black collar criminals and are all too often tightly integrated with the secret intelligence communities in each country.

I am quite sure that the US intelligence community is not taking advantage of citation analytics in English, and much less so citation analytics in Chinese, Farsi, Korean, or Russian. I am equally certain that our overseas intelligence operations are not taking advantage of commercially available indigenous capabilities including free lance journalists, academics, private investigators, and commercial business development sources because our default — this was my second graduate thesis consists of Embassies in which the diplomats have no money to spend and are outnumbered by personnel from other agencies that have learned not to trust the Department the State; and the only people with money, generally working from official installations under official cover, are the spies, who are both obvious and insist on dealing only with traitors taking money. Add to this the fact that we do not provide daily tactical signals intelligence support for overseas clandestine operations, and you have a clown show.

2- Is the information that China generally makes public through its state-run agencies reliable and sufficient?

The short answer is no but the long answer is that all information including deliberately manipulated information has value, especially when compared with other sources. Here in the USA it is now legal for

the Department of Justice to lie to the courts and for the Department of Defense to lie to Congress, never mind that we are also propagandizing our own public with lies. Janes Information Group does a phenomenal job of reporting on the actual military budgets of every country, and there are a multitude of commercial sources covering all aspects of nominally secret research, development, and acquisition — in the US our problem is that OSINT is not seen for what it should be, the foundation for everything else AND no one is held accountable for being stupid — the Cabinet does not know how to do the process of intelligence (decision-support) and decisions are made on the basis of bribes and blackmail, not facts or needs.

The Chinese are paying more attention to my work than the Americans. This makes me very sad.

[China Moves to the Front in OSINT Targeting](#)

3- Is there any research paper or unclassified information over the organisations collecting OSINT for China?

Just search for OSINT China and you will get to the pretenders. Realistically to do China properly we need ten thousand subject matter experts from across 100 collaborating countries. Absent an Open Source Agency and a leader of that agency who understands that OSINT is HUMINT and cannot be done without multinational multilingual depth, the USA will continue to fail and I don't anticipate India will do much better.

One thing we learned in supporting Scotland Yard's innovative OSINT endeavor is that spys don't do real estate and that analog records of who owns what are quite valuable. HUMANS are needed to access in-country analog sources and those HUMANS need to be fluent in Chinese and totally blended.

As long as people continue to conflate OSINT with social media and passive information sources, we will continue to be stupid and ineffective.

4- Please suggest sources on the Military Uses of OSINT.

You really need to do your homework inside of my lifetime of work. Start with my collection below. While you wait for the book to arrive, study the [articles](#), [chapters](#), and [monographs](#) that are free online, including:

Steele, Robert. "[Open Source Intelligence: What Is It? Why Is It Important to the Military?](#)," in Loch K. Johnson and James J. Wirtz (eds.), *Strategic Intelligence: Windows into a Secret World*, NC: Roxbury, 2004, pp. 112-119.

Answers on OSINT for India 4 – OSINT & Military

Sir, This link

(http://www.oss.net/dynamaster/file_archive/040320/fb893cded51d5ff6145f06c39a3d5094/OSS1997-02-33.pdf) is not working. [Steele, Robert. "[Open Source Intelligence: What Is It? Why Is It Important to the Military?](#)," in Loch K. Johnson and James J. Wirtz (eds.), *Strategic Intelligence: Windows into a Secret World*, NC: Roxbury, 2004, pp. 112-119.]

Dear Colleague,

OSS.net is a dead website at this time, we scrapped it and transferred the contents — over 8,000 pages from over 800 contributors — to

<https://phibetaiota.net>

and my own work to

[Home](#)

The particular item you seek is easily found by searching either website for the article title:

At Phi Beta Iota:

[1997 Open Source Intelligence: What Is It? Why Is It Important to the Military?](#)

At Robert David Steele under Publications, Books & Derivatives, Chapters:

Steele, Robert. "[Open Source Intelligence: What Is It? Why Is It Important to the Military?](#)," in Loch K. Johnson and James J. Wirtz (eds.), *Strategic Intelligence: Windows into a Secret World*, NC: Roxbury, 2004, pp. 112-119.

I must emphasize that the starting point for “meta” understanding is here:

[Smart Nation Vision – By Invitation](#)

The core reference, in Kindle and in Print, that consolidates the best of my writings over 30 years, is here:

PRINT: Steele, Robert, [REINVENTING INTELLIGENCE: 30 Years in the Wilderness \(Trump Revolution 46\)](#) (Amazon CreateSpace, Earth Intelligence Network, 2019).

KINDLE: Steele, Robert, [REINVENTING INTELLIGENCE: 30 Years in the Wilderness \(Trump Revolution Book 46\)](#) (Amazon Kindle, Earth Intelligence Network, December 2019).

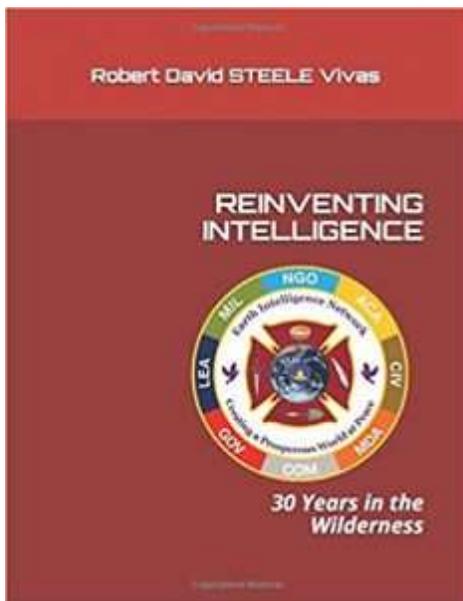

FREE ONLINE: None; individual items online.

The core handbook and most of the military-oriented material are at these links:

- [NATO OSINT Handbooks UPDATE 3](#)
- [NATO OSINT to OSE/M4IS2 Round-Up 2.0](#)
- [Reference: M4IS2 OSINT UN NATO Site and Book Lists](#)
- [Reference: M4IS2 OSINT UN NATO Search List Alpha](#)

If you want to walk for 30 years in my shoes start at the bottom of each of the below groupings of my work:

- [Articles](#)

- [Books](#)
- [Chapters](#)
- [Lectures](#)
- [Monographs](#)
- [Official Studies](#)
- [Testimony](#)

To understand the history of opposition and the valuable work of others:

- [Category: History of Opposition](#)
- [OSINT Historic Contributions Directory \(List\)](#)
- [Category: Historic Contributions](#)

You should also consider browsing with searches at Phi Beta Iota, for example:

- [military osint](#)
- [nato osint](#)

- [cia osint](#)
- [failure osint](#)
- [M4IS2](#)

I just checked and all my full text online at Phi Beta Iota is readable in Google Hindi and Google Punjabi — not the best, but enough for those who have not mastered English to form some ideas of their own.

With best wishes always,

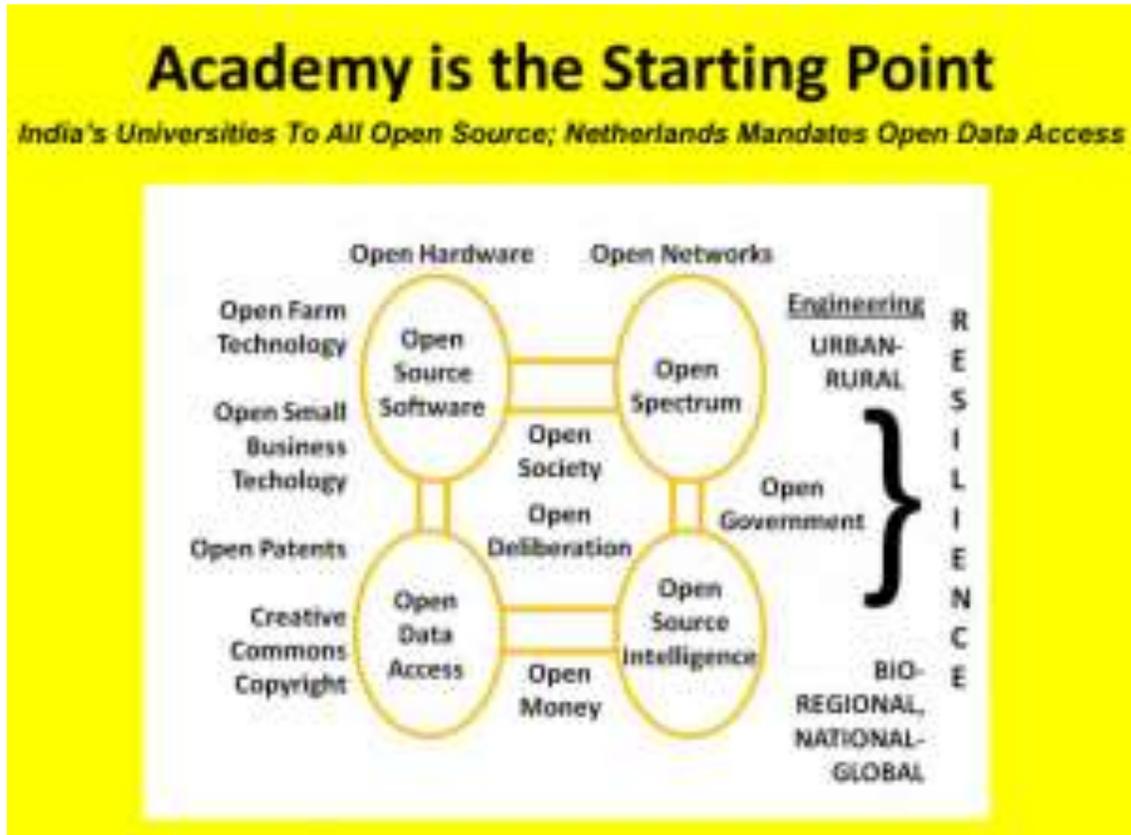

Robert

Answers on OSINT for India 5 – OSINT & OSEE

Sir please explain the picture.

Dear Colleague,

The core point of this graphic, which is out of date, the new graphics are below, is that OSINT — like Open Source Software and Open Source Hardware (limited in most people's understanding to computing and communications) — is ROOT for Open Source Everything Engineering (OSEE).

My book below has all the details on this considerable expansion of my original vision — India MOD should of course be reading this at the same time that they are reading [Reinventing Intelligence](#) and [Reinventing National Security](#).

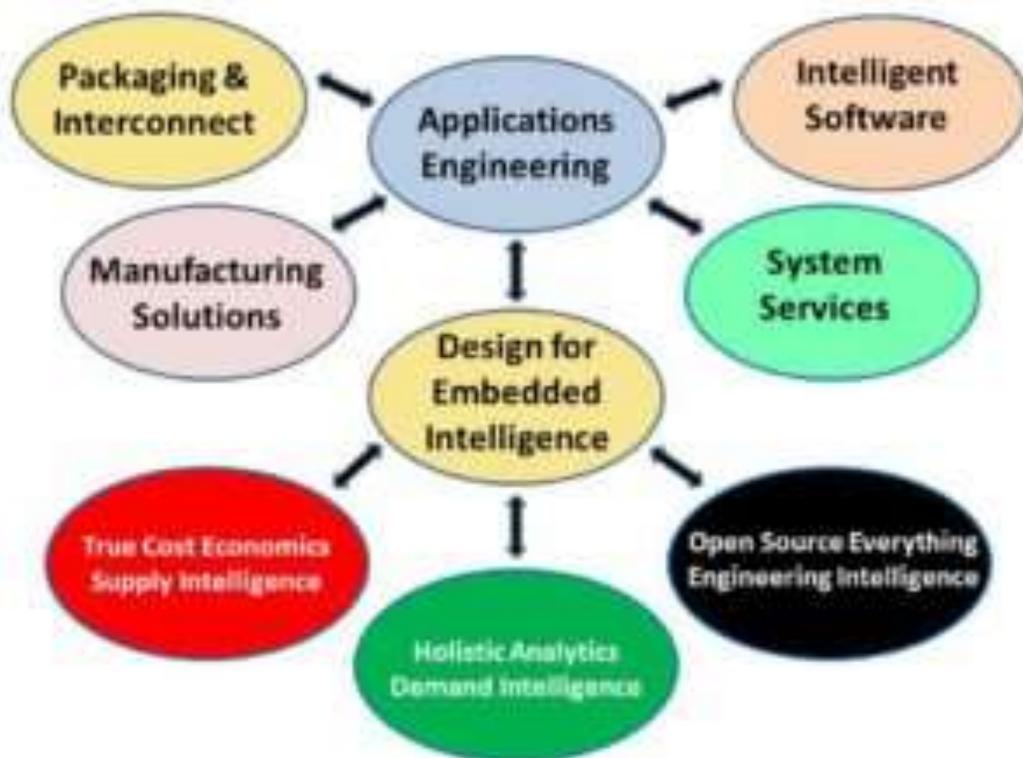

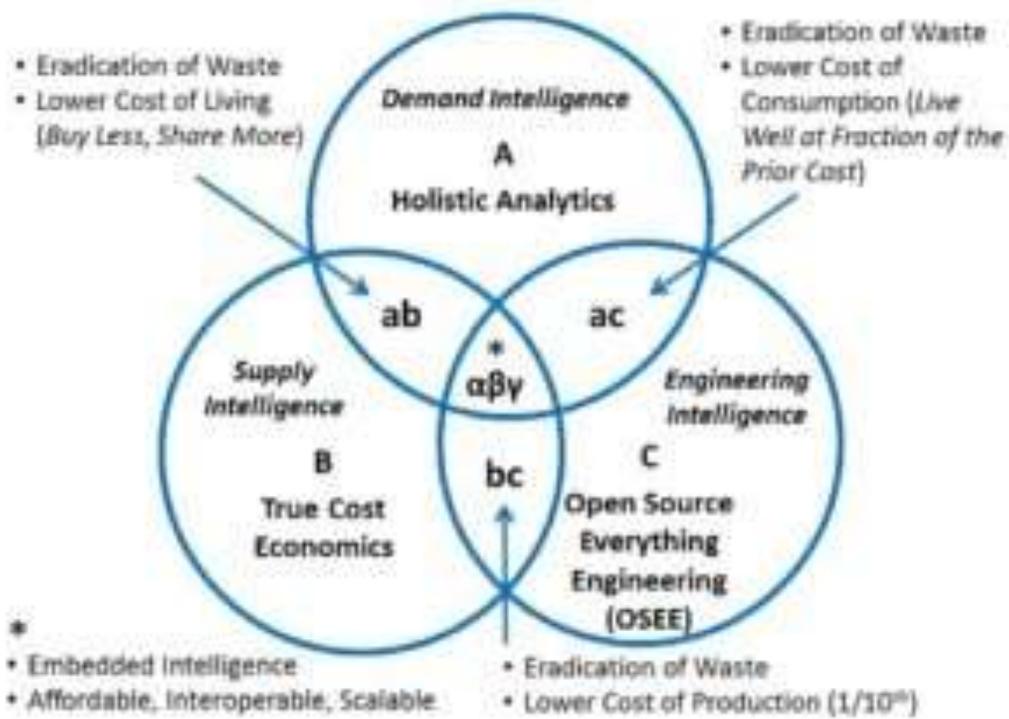

PRINT: Steele, Robert, [REINVENTING ENGINEERING: The Ultimate Hack — Creating a Prosperous World at Peace with Open Source Everything](#) (Amazon CreateSpace, Earth Intelligence Network, 2020).

KINDLE: Steele, Robert, [REINVENTING ENGINEERING: The Ultimate Hack — Creating A Prosperous World at Peace with Open Source Everything Engineering \(Trump Revolution Book 47\)](#) (Amazon Kindle, Earth Intelligence Network, December 2019)

FREE ONLINE: None, individual items online.

CORE OSEE GRAPHICS:

DESIGN	CONSTRUCTION	MAINTENANCE	RECYCLING	COST
FTM - Dedicated parts, typically expensive, relying on a distributed supply chain. Parts can't be manufactured independently because there are no blueprints to build them.	FTM - Non-modular, hidden, hard to reach parts, bolts and washers. Interchangeable parts exist only at part level, not within key-like modules.	FTM - requires lots of repair shops because of difficulty of the job. In some cases, it is illegal to work on your machine - such as replacing the computer with an analog work on anything with the warranty.	FTM - After its lifetime, tractor goes to a local junkyard and is shipped to China for recycling into scrap metal. At this point the FTM is sent to the junkyard. It is more expensive to do repairs than to buy a new tractor.	20% - In many industries, whenever the market will bear, a 20% or more of full cost. No social or ecological cost calculation.
OSE - modular, commonly sourced parts. Do not rely on particular suppliers as parts are available or easy to manufacture because they are open source.	OSE - transparent, no hidden, modular interchangeable parts up to entire engine units.	OSE - self maintenance is always possible. Option to go to service stations is there, but can't even avoid maintenance manually.	OSE - Open source version is modular and allows quick replacement of parts. Therefore a given machine never needs to go to the junkyard, as replacing parts always makes economic sense.	40% - 20% of industrial and cost of true costs calculated and costs avoided, no taxes, 15-20% more 0%.

Direct experience with 48 machines in the Global Village Construction Set (GVCS) has provided a spreadsheet of competitive prices for GVCS/OSE costs in comparison to industry standard retail costs. Generally speaking our costs are 50% to 20% of the market offering. Actual experienced and comparative costs are in a spreadsheet at <http://open-source-technology.org/gvcs/>.

My entire value proposition from 1988 onwards has been that OSINT is the foundation for creating a Smart Nation, a World Brain, and peace and prosperity for all. It is not possible to be a safe nation if you are a stupid nation. The USA today is very very stupid and very very corrupt. That is what President Donald Trump is addressing.

I will also emphasize that we still need secret intelligence, but as I said in the early 1990's, we should not be sending spies where schoolboys can go. The entire US secret intelligence community is inside out and upside down. We also do not do counter-intelligence. Nothing obtained via secret intelligence can be trusted to be true if you do not have the best counter-intelligence in the world.

Answers on OSINT for India 6 – OSINT & HUMINT

Sir,

1- OSINT definitely relates to HUMINT to the extent that it involves an analyst's presence of mind. Primary data on OSINT (govt docs) are old and hardly any attention has been paid to cybersecurity, safer communications. Also, Open Source Info has increased tremendously over the years calling ICT engineers to research and produce more upon technology that helps in faster collection, analysis and dissemination. We fail to realise that an area specialist or language expert may not the grab the nitty-gritty science ICT fast. In this regard please tell whether the collection and analysis of OSINT needs to be done by different experts or by the same analyst.

First, you are completely missing the fact that OSINT is HUMINT not because of the analyst but because 90% or more of the open sources are not online, not in English, and not accessible to standard collectors including diplomats and spies, under their present construct.

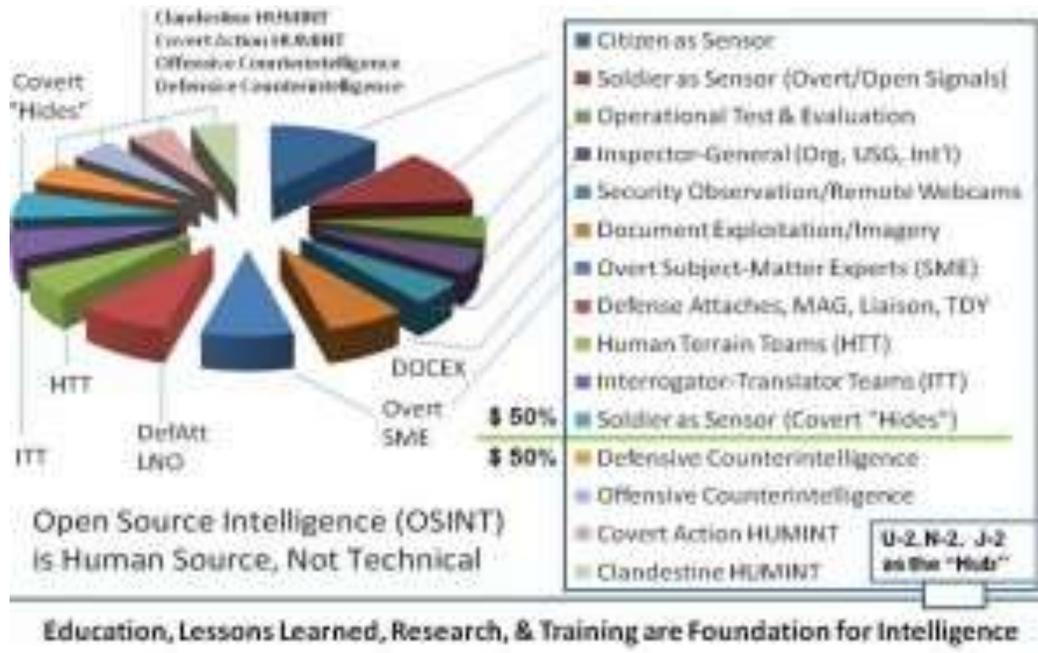

- X - 1% of WRITTEN Scientific Papers are PUBLISHED
- X - Perhaps 1% of PUBLISHED Papers are ACCESSED generally only in host language
- X - Perhaps 1% of 1% of non-English language unpublished papers are accessed
- X - Perhaps 1% of 1% of gray literature (off-line) knowledge in English is accessed
- X - No global index of subject matter experts on all topics in all languages at all levels
- X - No means of networking all local residents as part of a national "brain" across all topics

My second graduate thesis examined three Embassies I was very familiar with and determined that we collect at best 20% of what is relevant and available, and spill 80% of that in how we return it to our

home country — hence we are operating with at best 2% of the relevant available analog information — compound that with our processing no more than 1% of what we have in digital form and you can see how very shallow and irresponsible our approach to global information have been, is now, and will for the foreseeable future absent an Open Source Agency and a complete redirection of the existing secret world that is 70% waste and produces no more than 4% of what the President needs (and nothing for everyone else).

It is important to distinguish between OSINT and OSIF. Almost everything is open source data or open source information (for example, anything that is of generic interest is OSIF, not OSINT). OSINT answers a specific question from a specific commander or customer. No one in the USA does OSINT per se, they just process OSIF and vomit it into the system.

You do focus on one very important point: the collection and analysis of OSINT in any given domains needs to be done by Subject Matters Experts (SMS) and you will see that in the below diagram, they are an important slice. OSIF can be collected by every type of human, and the distinctions among the previously illustrated fifteen slices of HUMINT and the eight tribes of OSIF are important.

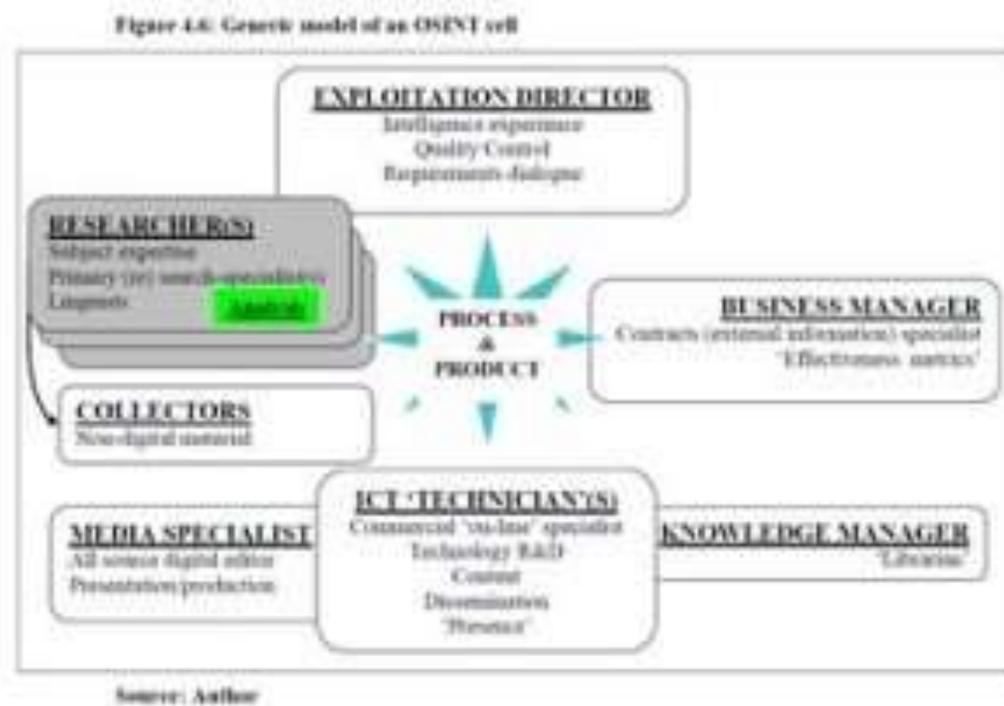

If I were in charge of the all-source intelligence endeavor, the analysts would be mature officers hired only after having proven themselves as published, cited, and deeply immersed in their respective OSIF arenas — today we rely on children spoon fed secrets, deprived of OSIF, who go through the motions. Nobody is holding the secret world accountable for being stupid & wrong.

I cannot stress enough that any OSINT endeavor that limits itself to what is available online is corrupt as well as largely useless.

2- Throw some light on the role of think tanks in OSINT? Think tanks have been missing from the Information Commons.

Think tanks have not been missing from the information commons, they are included in the eight tribes, generally as part of academia but they can also be found within government, commerce, and non-governmental. As a general rule think tanks are largely worthless because they have a fixed stable of experts educated, generally badly, decades before, and they do not have access to multilingual human sources and data sources — they tend to work in their primary language and they tend to be advocacy oriented rather than discovery and decision-support oriented.

3. Please comment of the aptness of the following model from the perspective of any intelligence agency.

Source: [Gibson-PhD-Thesis-on-OSINT 2007](#)

Mr. Gibson mis-appropriated my work and also failed to attribute the entirety of his PhD to my work — many of his sources appear to be from among those that I organized in my international OSINT conference from 1992 until 2006 when the conference was stolen from me by Eliot Jardines, a former Army sergeant and because he was not me and harmless, the short-lived Associated Deputy Director of National Intelligence for OSINT, with the explicit approval of James Clapper, then the DNI. Gibson also appears to have drawn on books I reviewed, here are 300 I summarized for my followers:

[Worth a Look: Book Reviews on Intelligence \(Most\)](#)

Below is the original OSINT cell model that inspired Mr. Gibson, who appears to have sought to obscure his uncredited appropriation with minor modifications:

* Specializes in methods for finding and interviewing exactly the right individuals.

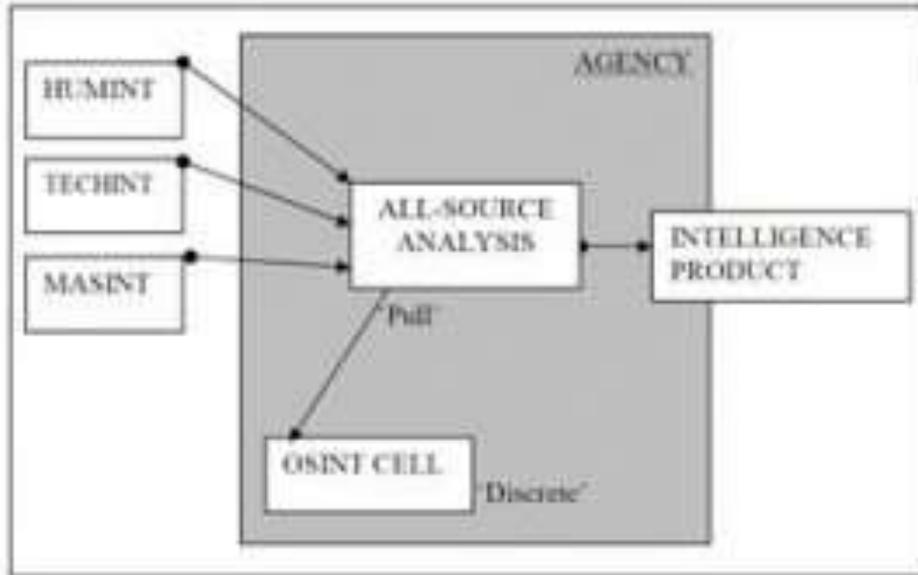

The first published appearance of the above is at slide 56 in my 1998 presentation in Australia, available to you at the below link in downloadable form.

Steele, Robert. "[Open Source Intelligence: Executive Overview](#)," Perth, AU: Conference on Open Source Intelligence, Keynote Presentation, October 16, 1998.

I recall Mr. Gibson's dissertation with scorn. Apart from his leveraging my lifetime of work without credit he actively insulted me in his PhD thesis and never had the integrity to consult me directly. I do not consider his thesis to be PhD-quality work nor do I consider him to be original in any sense of the word.

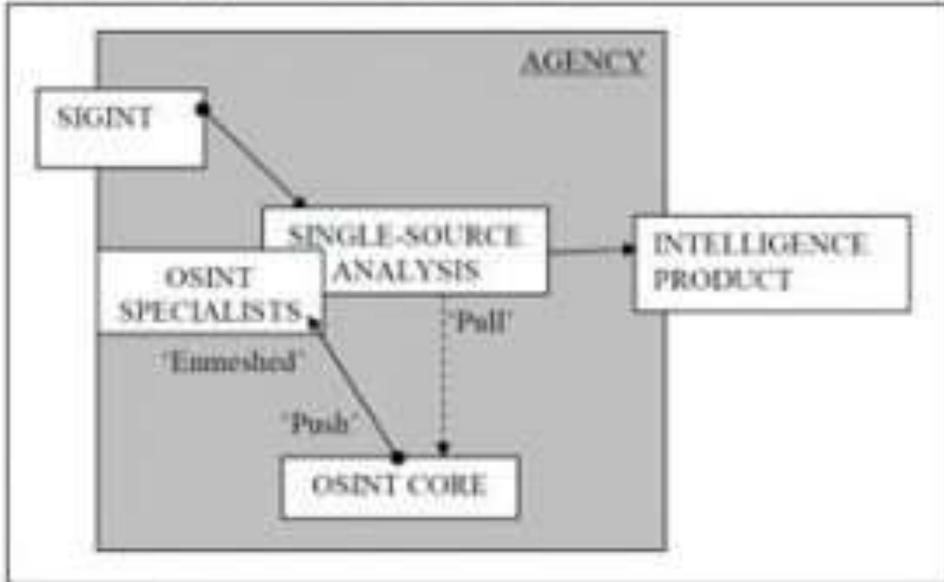

In the below two graphics, he gets it wrong both times.

Figure 4.4: All-source OSINT treatment model

Source: Author

Figure 4.5: Single-source OSINT treatment model

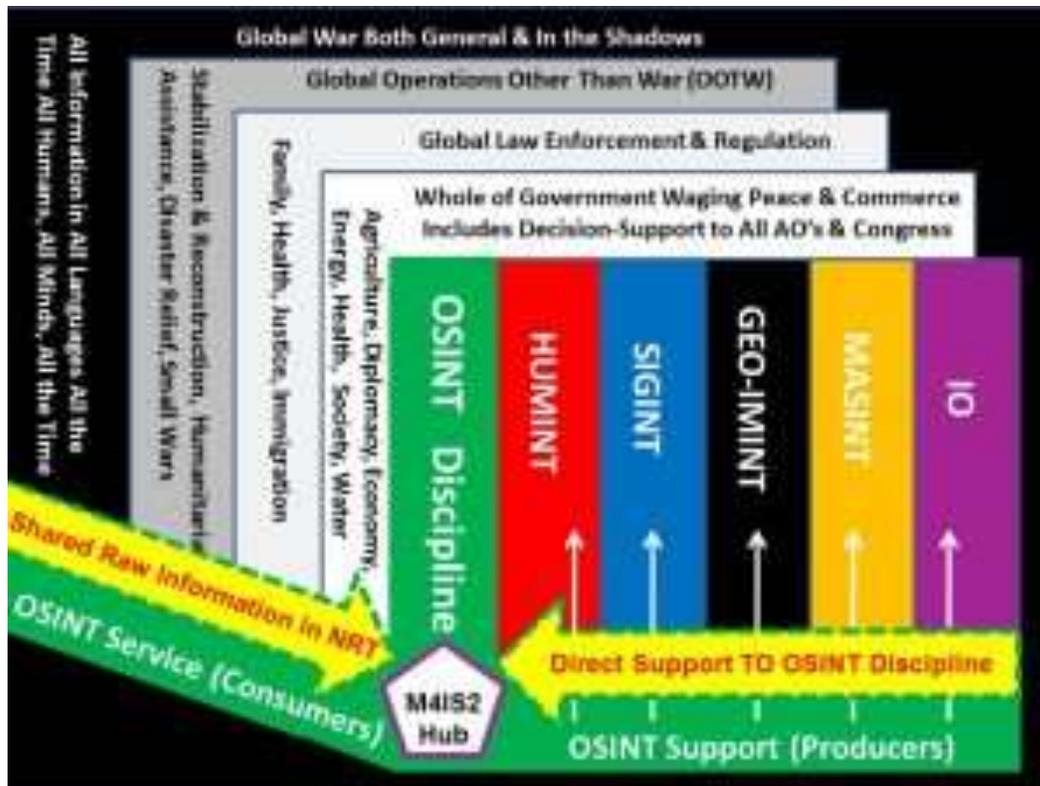

Source: Author

Below are four graphics in existence when Gibson did his thesis. The first is from Jan Herring, I created the second and fourth, Joe Markowitz created the third. Gibson's thesis is noteworthy for being lazy and lacking in breadth of authentic sources — he appears to have deliberately obscured and neglected my work knowing full well everything was available free online at the time, while badly harvesting from the

800 experts who spoke at my 20+ international conferences and whose work was easily available to Gibson free online at OSS.net at the time (today at <https://phibetaota.net>). .

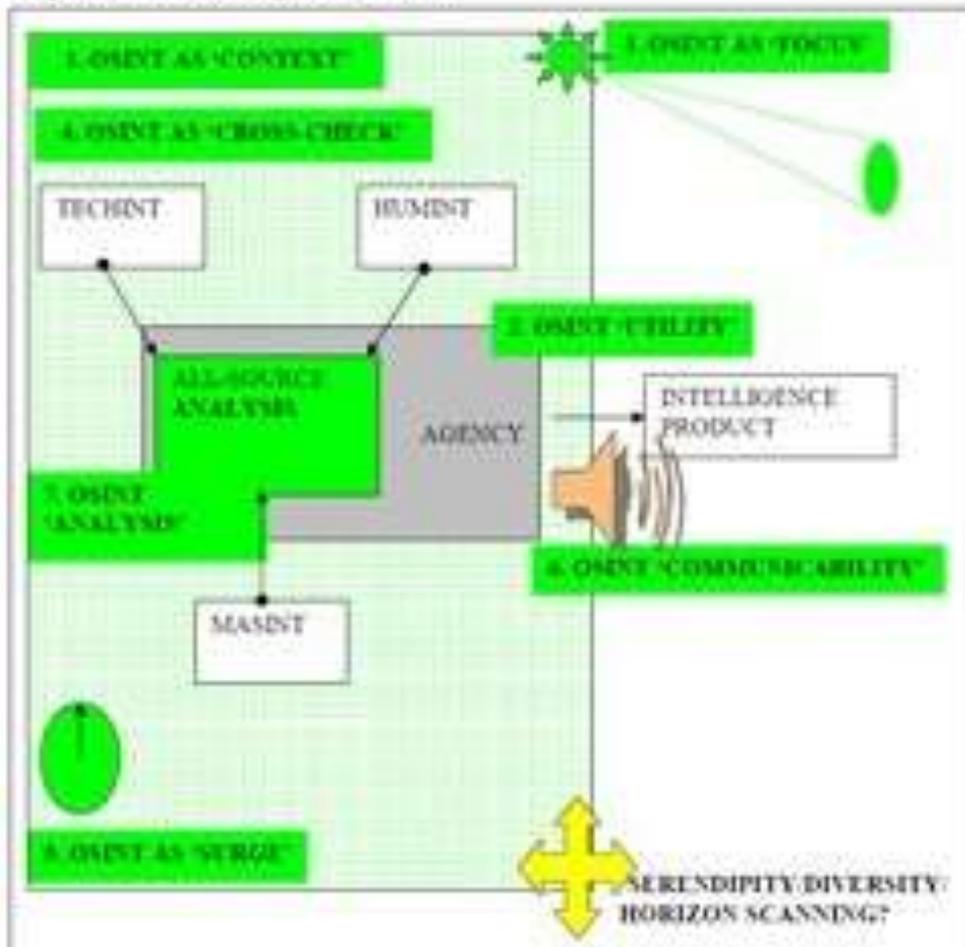

I struggled to find something of material value in Gibson's thesis, which I consider a very shallow endeavor lacking in a deep understanding of the threats, policies, demographics, and true costs against which OSINT is priceless to the commander and civilian customer.

Here is the one graphic in Gibson's work that I consider a moderately original contribution:

Figure 4.7 The seven High Order Factors

Source: Author

I do a better job in the below work circulated in draft in the US and UK in 2006, but let's give Gibson a tiny bit of credit.

Steele, Robert. "[Open Source Intelligence \(Strategic\)](#)," in Loch Johnson (ed.), *Strategic Intelligence: The Intelligence Cycle*, Westport, CT: Praeger, 2007, Chapter 6, pp. 96-122.

You might also have a look at this overview and my original work on the value of OSINT overall as circulated in draft in the US and UK in 2006.

Steele, Robert. "[The Evolving Craft of Intelligence](#)," in Robert Dover, Michael Goodman, and Claudia Hillebrand (eds.), *Routledge Companion to Intelligence Studies*, Oxford, UK: Routledge, July 31, 2013.

Steele, Robert. "[Open Source Intelligence \(Strategic\)](#)," in Loch Johnson (ed.), *Strategic Intelligence: The Intelligence Cycle*, Westport, CT: Praeger, 2007, Chapter 6, pp. 96-122.

Two more useful contextual works by others are here:

[Review: No More Secrets – Open Source Information and the Reshaping of U.S. Intelligence](#)

[Review: Open Source Intelligence in a Networked World](#)

And of course you should attend to the USDI material at the top of the below link, that includes the 2007 DoD briefings that General Michael Flynn has had in hand since 2014.

[Smart Nation Vision – By Invitation](#)

While now dated below is a partial sampling of the “pool” from which Mr. Gibson appears to have drawn the bulk of his “original” research — and of course he ignored everything that was not convenient to his shallow approach to a topic of vital national importance.

[Search: bibliography for osint \(new master list of archive link tables and directory entry points\)](#)

Below is my own curated list of particularly important contributions:

[OSINT Historic Contributions Directory \(List\)](#)

And here is a 2013 OSINT Literature Review of possible use to you.

[OSINT Literature Review, Name Association, Lessons Learned](#)

The briefing for Australia was one of my most comprehensive in the early days. My briefing for the Ministry of Defence in Denmark below in 2016 is my most recent overview. No country — particularly the UK and the US — are doing OSINT with intelligence or integrity.

Steele, Robert, “[Royal Danish Defence College: Lecture by Robert Steele on Open Source Intelligence Done Right](#),” Copenhagen, Denmark: Royal Danish Defence College, April 18, 2016. OFFICIAL VIDEO 59 Minutes.

Steele, Robert. “[Robert Steele on OSINT – Why and How](#),” Copenhagen, Denmark: Government of Denmark, April 18-20, 2016, as commissioned and presented to military, police, and national services. BRIEFING

The below three briefings are also useful for India:

Steele, Robert. “[The Ultimate Hack – Resilient Villages, Smart Cities, Prosperous Nations at Peace — and Unlimited Clean Water](#),” Potomac, Maryland: Reserved, March 6, 2016, as discussed for transmission to the Government of India and others.

Steele, Robert. “[Reflexivity as Integrity: Toward Earth/Life 4.0](#),” Washington, DC: Washington Academy of Sciences, March 31, 2012.

Steele, Robert. “[The Ultimate Hack: Re-Inventing Intelligence to Re-Engineer Earth](#),” Odense, DK, October 27-28 2009. Simplified version; see March version for the longer engineering version.

Answers on OSINT for India 7 – Source Concepts

Slr,

1-Is there any comprehensive OSINT report publicly available which may help to know what the sources are?

2- How can OSINT help in generating high-grade intelligence?

1-Is there any comprehensive OSINT report publicly available which may help to know what the sources are?

The short answer is no. You should avoid like the plague the “industry” reports that purport to identify high-value OSINT enterprises. The truth-teller is that any report that includes Palantir as a high-value offering is absolute crap. All existing OSINT providers are time and materials shops that are lazy and unprofessional. They don’t do foreign languages, they generally have to conform to client requirements in relation to clearances or citizenship, and they simply do not know what they do not know.

In 1997 via InfoSphere, one of the best of the actual analog-foreign language capable firms, we did something CIA could not do — we identified and evaluated 364 terrorist, insurgent, and opposition websites in 29 languages. Today we do 33 languages and 12 dialects of Arabic. There is no one in Washington DC that can do that — they don’t know how to go about it.

There are three levels of source access:

01 Know who knows locally — this includes Gray Literature — openly available but little known, locally manufactured. I also coined the term Black OSINT — OSINT so precious that if the enemy knew you were deriving value the source would be closed down.

02 Citation analytics in all languages. The Information Science Institute (ISI) was instrumental in my beating the crap out of CIA for the Burundi Exercise before the Aspin-Brown Commission. They can identify the top published and cited experts in the English language on anything. You can then go to the experts and their leading graduate students and be ahead of the publication curve. There are similar offerings in Chinese and Russian. For other countries you survey the Chairmen of the relevant departments at the top universities. India, for example, should have an OSINT Council in which a top academic is assigned to stay current with the top people — both published and cited in the media and identified by word of mouth — for each of the threats, each of the policies, each of the challengers — a National OSINT Council.

03 The Web including the Deep or Dark Web is such shit I would limit attention there to cyber and counterintelligence, and make that a SIGINT function. The old women at CIA responsible for OSINT

cannot do cyber, and what we have that is called cyber now in the USA cannot do intelligence or counterintelligence. NSA is processing less than 1% of what it has, and does not do SIGINT support to clandestine operations overseas or counterintelligence operations at home. There is an opportunity for creating a hybrid cyber unit that does both OSINT and SIGINT counterintelligence inclusive of the near-real-time identification of traitors, elite pedophiles, and white collar criminals, as well as all Mossad and MI-5 and MI-6 and CIA and FBI people across the country doing bribery and blackmail. We've never been serious about assuring data integrity in cyber or about using cyber/SIGINT for counterintelligence and white collar crime.

[1994 Sounding the Alarm on Cyber-Security](#)

At the end of the day OSINT comes down to knowing who knows, and OSINT is HUMINT. Anyone who does not "get" that is an obstacle to progress.

1992 The OSS, Intelligence, Secrecy, and Open Sources

"Know who knows."

Stovan Dedijer

Stovan Dedijer (DIP) is the father of business intelligence defined as decision support, not merely internal data mining as the term is used today. Born in Croatia, he drove General Westmoreland in WWII, became a Swedish citizen and professor at Lund University, and returned to Croatia to die.

When Admiral Stoeneman over-ruled CIA in 1992 ("we'll come if the conference is SECRET U.S. Citizens Only") we did not advertise the event and expected 150 people. 675 or so showed up, including a 15-person delegation from Sweden led by Stovan Dedijer.

Answers on OSINT for India 8 – Data, Information, Intelligence

Sir, I have made the following diagram. Please comment. This is a draft and not a final pic, as will be the case with most of what I have been sending and will send in the future. I am also attaching the link for a CIA OSC Okhinawa report that I had found online. Kindly comment on it. Is it OSIF or is it a true OSINT report.?

This is an excellent diagram and I see you are drawing on my earlier distinctions in which Dr. Joseph Markowitz added OSINT-V or validated OSINT. Our definition of Validated OSINT is that it is either confirmed or — just as valuable — not contradicted — by classified sources available to the responsible subject matter analyst expert.

Definitions

 OSD - Open Source Data

 OSIF - Open Source Information

 OSINT - Open Source Intelligence

 V-OSINT Validated Open Source Intelligence

I like your innovation in putting Black OSINT at the top but it is important to understand that Black OSINT refers to openly available information (generally Gray Literature and more often than not analog in-country rather than online) that is so revealing that it SHOULD be classified. A simple example now known is online translation — I have been astonished by the number of classified and corporate confidential and scientific & technical insights that have been available in the cloud because those using translation software have not realized that everything they have been translating has not only been collected by NSA but is also available via other paths into the cloud.

It is in my view important to always show OSINT in relation to the other secret disciplines. While OSINT can answer at least 80% if not more of the intelligence (decision-support) requirements of most customers including defense customers, in the past ten years I have become much more respectful of both counter-intelligence, and of the ability of clandestine and signals intelligence particularly to provide vital counter-intelligence — for example, proof of treason, elite pedophilia, and white collar crime in agriculture, commerce, defense, diplomacy, education, transportation, and more.

Here are two graphics I came across while looking for the above graphic.

RANDOM above refers, for example, to a flag officer talking to a taxi driver and concluding that his intelligence people are full of shit because the taxi driver makes more sense. More often than not this will be a correct conclusion. A MAJOR pathology within the secret intelligence world is that they live in a bubble and are not held accountable for being stupid or unprofessional. As one of my book sub-titles suggests, we need to access all minds in all languages all the time. These people are not even close — they are at 1% processed of 1% collected of 1% available, at best. And if you add to that 1% disseminated of the 1% processed, it is even more ugly.

Below is worth noting because the Open Source Marketplace is about much more than sources directly — you have tools and intermediaries.

Open Source Marketplace

SOURCES

Current Awareness
(e.g. Individual URLs)

Current Contents
(e.g. ISI CC Online)

Directories of Experts
(e.g. Gale Research, FLZTCF)

Conference Proceedings
(e.g. British Library, CIBT)

Commercial Online Sources
(e.g. ISI, DIALOG, SW, GREET)

Risk Assessment Reports
(e.g. Forensic, Political Risk)

Maps & Charts
(e.g. EarthView Publications)

Commercial Imagery
(e.g. APOC, Panoram, Submarine)

SOFTWARE

Internet Tools
(e.g. NetDial, Copernicus)

Data Entry Tools
(e.g. Wids, IBM, SPA)

Data Retrieval Tools
(e.g. RetrievalPlus, Colspan)

Automated Abstracting
(e.g. NetDial, DR-1000)

Automated Translation
(e.g. SYSTRAN, SRA NTIS-99)

Data Mining & Visualization
(e.g. ISI, NRAMS, World Genomes)

Desktop Publishing & Communications Tools

Electronic Security Tools
(e.g. ISI, POP, IBM Cryptolines)

SERVICES

Online Search & Retrieval
(e.g. MERAC, Euralit Enterprises)

Media Monitoring
(e.g. FBI via RTSL, BBC)

Document Retrieval
(e.g. ISI Carfax Document)

Human Abstracting
(e.g. MBIS Members)

Telephone Surveys
(e.g. Risk Tools Associates)

Private Investigations
(e.g. Cognis, Philanthro, Parvus)

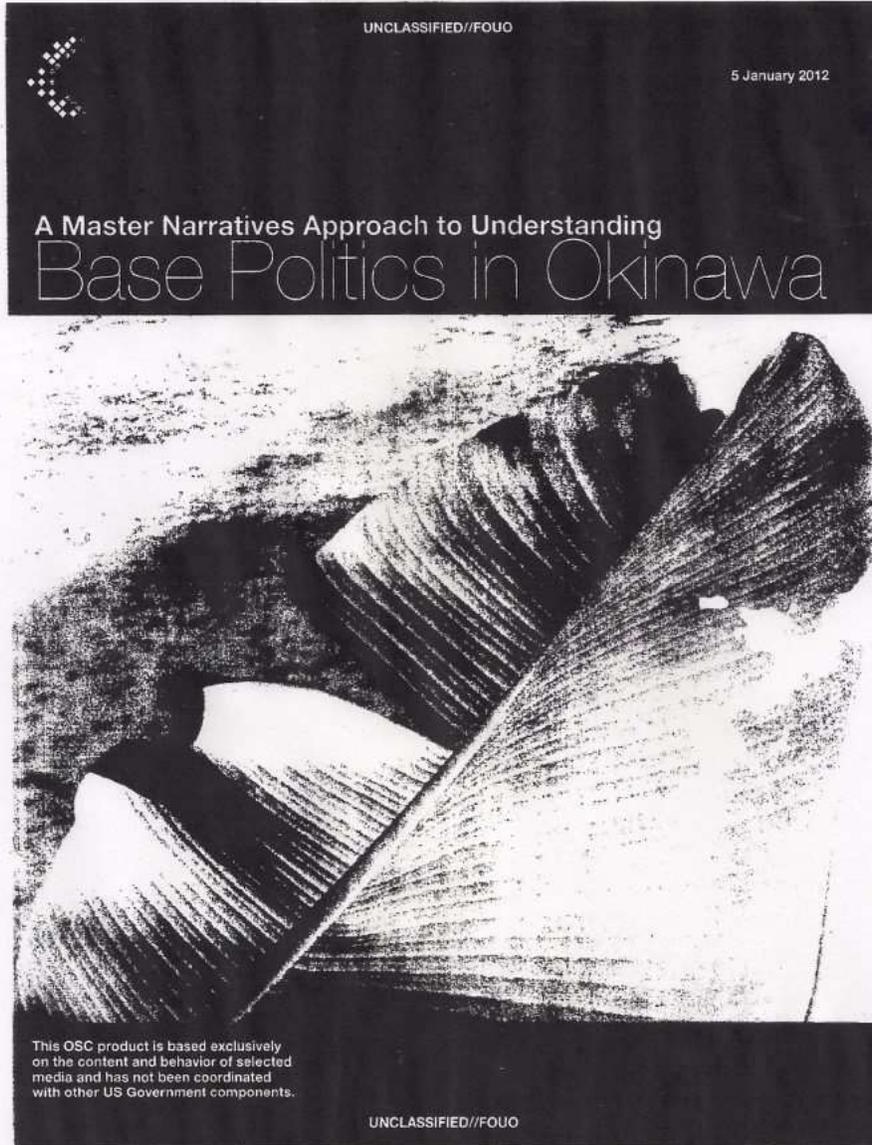

Market Research
(e.g. ISI, FUL, EW Tools)

Strategic Forecasting
(e.g. Oxford Analytica)

One of the reasons the OSINT Cell that I designed is so important is because it provides for both a primary research specialist (outreach to human subject matter experts) and an online research specialist — not only does online cover special librarian databases such as DIALOG and LEXIS-NEXIS but it also knows the difference between the shit web, the cool web, and the dark web.

As best I can tell the US secret intelligence community and its contractors — for example, BAE which just got \$400M from the US Army's National Ground Intelligence Center (NGIC) are totally out of touch with intermediaries, and particularly intermediaries based on foreign countries who will never qualify for clearances and often hate Americans. Properly done OSINT should be both a multinational endeavor and one that can be done through cut-outs. Some of our best OSINT in the 1990's not only used graduate students skilled in 29 languages CIA does not speak, but we turned classified intelligence requirements into "graduate thesis requirements."

Now, you ask about the following document:

<http://app.okinawatimes.co.jp/documents/cia20180528.pdf>

This is OSIF not OSINT. It is a generic product. I actually like it very much. While it lacks true cost economics and also lacks all the other countries that play in relation to Okinawa (including particularly China, the Philippines, and Viet-Nam, on balance this is a very find OSIF contribution.

A true OSINT report would answer specific questions from the commander such as:

What is the true cost of maintaining our bases on Okinawa rather than basing ourselves within the USA and demanding that the US Air Force be able to deliver a division in one week using a mix of military and

conscripted aircraft combined with an acquisition program that ensures that all elements of our Marine Corps force are not only air transportable, but can roll off with all fuel, water, ammunition and crew and be instantly combat capable.

When I look at India and Pakistan and Bangladesh I see the mistakes that Gandhi made, the errors that the Hindus have made, and the loss of what could have been an Indian empire equal to China. Even today India has more Muslims than any other country in the world except Indonesia — and it is the only country in the world where more than one million people speak each of 22 languages.

From where I sit OSINT and an OSA for India — are exactly what India needs right now to think about all ten threats all twelve core policies, and all challengers; and to conceive of a strategy that eliminates the Zionist parasite, makes peace with Pakistan and Bangladesh as well as China over the Kashmir watershed, and creates a massive new federation that is rooted in Open Source Everything Engineering (OSEE) such that the people at the bottom of the pyramid, as C. K. Prahalad wrote, become the focus on the Government of India — Hans Morgenthau wrote to the people being the foundation for national power. India is coming to the end of an era where British backing and Sandhurst trained officers could keep the rabble down. It's time to separate from the Commonwealth and focus on India becoming a global power that is rooted in OSEE capable of creating a prosperous India at peace, an India where 2,000 farmers a year are not committing suicide, where Open Source tractors replace children and beats of burden in plowing, and so on.

This may not have been your intent, but in reflecting on your question I am seeing an opportunity to reflect on my own evolution from being the founder of the OSINT discipline to being the founder of OSEE — all the OSINT in the world will not help if the leadership refuses to consider OSEE as a solution for the greater good of all India.

I would be delighted if as part of your project you were to update the [NATO OSINT Handbook](#) such that it becomes an official teaching document and point of reference for the military in India as well as Rest of Government.

I would also be delighted if MoD India cared to host two conferences:

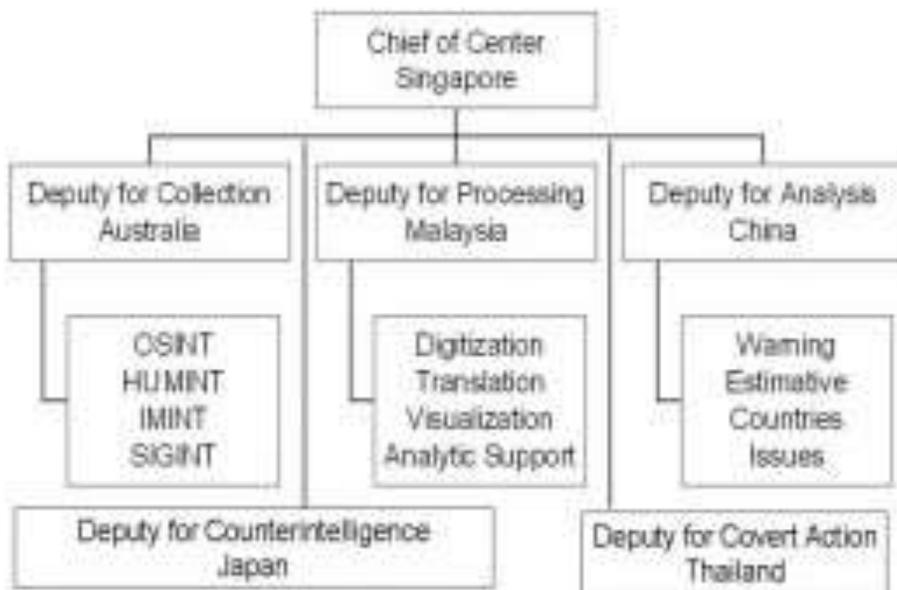

a) a national conference with representatives from the “eight tribes” depicted below, to discuss how to create a Smart Nation.

b) a military to military conference including Pakistan and Bangladesh and China and Viet-Nam and the Philippines and others, to discuss the creation of a multinational decision-support centre such as I have long envisioned and illustrate below.

Multinational - Operational

You are on a very important journey. Start thinking now about a briefing worthy of the Minister of Defence. If I were to get an Open Source Agency mandate in the USA, I would certainly be creating an MDSC co-located with NATO ATC in Norfolk, but I would also want to subsidize several MDSC, for example in India, Turkey, Brunei, and Ecuador.

Posted on [2020/11/27](#)

Answers on OSINT for India 9 – Value & Utility

Sir,

You have published your appraisal of the percentage value and utility of OSINT for each of the ten high-level threats to humanity. Can you post the graphic and make additional comments on the relative value of OSINT for each of the twelve core national policies that you identified several years ago?

Our government professionals are as skeptical — not afraid of OSINT, just skeptical — about the relative merits of OSINT in relation to secret sources and methods. Is there a method that you or others have used to document the actual performance value of OSINT in relation to secret sources and methods for any given command or customer or topic?

I am delighted you were able to look over my most important reference on OSINT:

Steele, Robert. “[Open Source Intelligence \(Strategic\)](#),” in Loch Johnson (ed.), [Strategic Intelligence: The Intelligence Cycle](#), Westport, CT: Praeger, 2007, Chapter 6, pp. 96-122.

Here is the graphic as it appeared in the book:

OPEN SOURCE INTELLIGENCE		101
Economic and social threats, including		95%
• poverty		99%
• infectious disease		95%
• environmental degradation		90%
Interstate conflict		75%
Internal conflict, including		90%
• civil war		80%
• genocide		95%
• other large-scale atrocities		95%
Nuclear, radiological, chemical, and biological we		75%
Terrorism		80%
Transnational organized crime		80%

Figure 6-3. OSINT Relevance to Global Security Threats

and here is a later variation that I prefer to use now.

Utility of Open Sources

Economic and social threats, including	95%
• Poverty	99%
• Infectious Disease	95%
• Environmental Degradation	90%
Interstate conflict	75%
Internal conflict, including	90%
• Civil War	85%
• Genocide	95%
• Other Large-Scale Atrocities	95%
Nuclear, radiological, chemical, and biological WMD	75%
Terrorism	80%
Transnational organized crime	80%

[2008 Open Source Intelligence](#) [in Loch Johnson (ed) Strategic Intelligence Vol 2, Chapter 6]

The source for the ten high-level threats to humanity is below along with my summary review and a link to the Amazon page, and it is important to note that LtGen Dr. Brent Scowcroft, USAF (Ret) was the US member of the panel that identified these threats in PRIORITY ORDER.

[Review: A More Secure World—Our Shared Responsibility—Report of the Secretary-General’s High-level Panel on Threats, Challenges and Change](#)

It was this listing that inspired me to review transition books from past US presidential elections to see what policy domains might be identified that were vital for sustained intelligence (decision-support). You can see the policy domains along the horizontal axis, from Agriculture to Water.

Preliminary Holistic Analytic Model

The relative value of OSINT for each of the twelve core policies is at least 90%. We do not “do” secret intelligence and counterintelligence against our own population across these twelve policies — for example, the FBI ignores British and Zionist agents who are committing treason against the USA, and ignores elite pedophiles (while also collaborating with the Mossad and CIA and MI-5 and MI-6 in trafficking in children and doing DOMESTIC pedophilia entrapment and blackmail operations), and also ignores billion and trillion dollar white collar crime. There is a HUGE role to be played by NSA against corruption and treason across all twelve policies. At the same time, there are some extraordinary things that OSINT can do. My colleague Dr. Bert Little, for example, at a cost of \$4M, did data analysis leading to the identification of close to \$80M in crop insurance fraud. We don’t do all we can do with OSINT across these twelve core policy areas (including true cost analytics which we do not do at all on anything) and we are not applying ethical necessary secret sources and methods against the criminals and traitors that are active within the USA and abroad in relation to each of these twelve policy domains.

There are three points I would make here:

01 The Cabinet agencies cannot be relied on for OSINT (unclassified decision-support). Ellen Siedman, then on the National Economic Council in the USA, spoke to my OSINT lunch club and complained that on the one hand the secret intelligence world does not “do” comparative trade analysis (US versus others) and on the other hand the Cabinet agencies do not know how to “do” the proven process of intelligence (requirements definition, collection management, processing, analysis, communication of findings in a form digestible by a busy decision-maker).

02 The secret world obsesses on the two red dots above and ignores everything else at a time when the twelve policies and three threats are the heart of creating a prosperous world at peace. This needs to change.

03 Both the secret intelligence world and the Cabinet are incapable of doing true cost economics inclusive of future and opportunity costs and they do not have a holistic analytic model — a major reason for KEEPING a central intelligence agency, after purging it of idiots and traitors, is to ACHIEVE the holistic analytics and true cost economics synthesis required to support Grand Strategy, inter-agency acquisition, and multinational as well as Whole of Government operations.

Your second question is EXTREMELY IMPORTANT. The answer comes from the wisdom of Ben Harrison, the founder and leader of the US Special Operations Command (SOCOM) J-26, a man who in my view has not received the accolades he should have.

Ben's brilliance was in recognizing that he should not answer any OSINT question or Essential Element of Information (EEI) unless it was first submitted, as are all EEI for classified collection, into [COLISEUM](#), or the Community On-Line Intelligence System for End-Users and Managers, a Defense Intelligence Agency (DIA) automated production/requirements management system.

Within one year Ben and SOCOM J-26 had documented that for \$5M with 22 people they answered 40% — FORTY PERCENT — of all SOF EEI world-wide.

As General Tony Zinni has documented, the secret world provides “at best” 4% of what a major commander needs to which I would add “and nothing for everyone else.”

USA \$75B/Year = 4% “At Best”

80% of what I needed to know as CINCENT I got from open sources rather than classified reporting. And within the remaining 20%, if I knew what to look for, I found another 16%. At the end of it all, classified intelligence provided me, at best, with 4% of my command knowledge.

Sadly, CIA was able to lie to subsequent commanders of SOCOM after General Peter Schoomaker, and the J-26 was virtually abolished, today it consists of five people going through the motions with no money to spend.

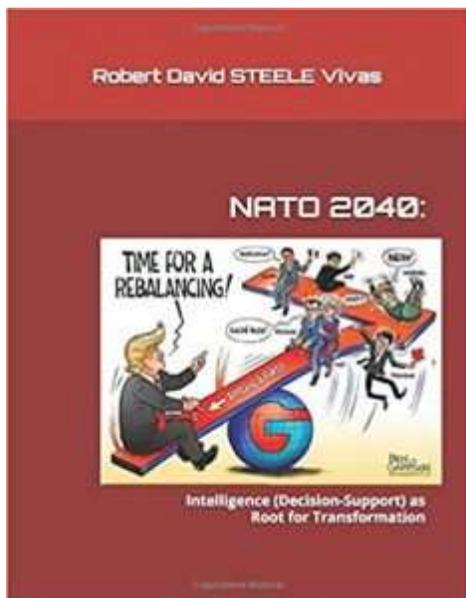

What this means is that an Open Source Agency (OSA) could not only rapidly get back to answering 40% of all requirements from ALL Cabinet agencies across ALL threat and policy domains, but 56% of the EEI that have NOT been satisfied are up for resolution by a combination of an OSA doing 80% of them and the secret world, refocused on the fundamentals, doing the other 20%.

It is VITAL that OSINT be part of the all-source intelligence community from requirements to processing to analysis to dissemination, but it is also vital that OSINT have its own agency protected from sabotage by the likes of CIA or whatever the equivalent in India is. This is the conclusion of BGen James Cox, CA, the NATO Deputy J-2 that sponsored my pioneering work for NATO from 2000-2004:

If I was king of the world, I would build an OSINT organization to rival existing national SIGINT organizations (CSEC in Canada, NSA in US) and HUMINT organizations (CSIS in Canada, CIA in US). This OSINT organization would be in a number of big buildings around the country, tapped into all the sources you have long written about (media, experts, academia ... all tribes) AND they would produce magnificent 'single source' OSINT products that could be added to SIGINT, HUMINT, IMINT etc. products at the national level.

[2013 BGen James Cox, CA \(Ret\) On the Record on Open Source Information versus Open Source Intelligence versus Secret Intelligence](#)

The below, also available as a Kindle and Print product at Amazon, is worthy of circulating among Ministry of Defence officials in India and everywhere else.

Answers on OSINT for India 10 – Disinformation & Information Pathologies

Sir,

Sometimes I feel as if information is being released to the public in very clever ways, and other times I feel as if information is being manipulated or hidden in ways I may not be able to detect. Do you have any thoughts on disinformation and how to deal with disinformation?

This is an extremely important question and perhaps the heart of the matter for intelligence (decision-support) whether secret or open. Discernment. Data integrity, source validation, accuracy and veracity. I am thrilled to have you ask this question because in my experience this is the Achilles heel of most OSINT endeavors where idiots take social media at face value and ignore everything else.

The below graphic captures my early thoughts on this topic.

INFORMATION PATHOLOGIES

- Forbidden Knowledge
- Lost History
- Manufacturing Consent
- Missing Information
- Fog Facts
- Propaganda
- Rule by Secrecy
- Weapons of Mass Deception
- Weapons of Mass Instruction

THE CURE

Integrity

My summary review for each of the above books can be read below.

[Review: Forbidden Knowledge–From Prometheus to Pornography](#)

[Review: Lost History—Contras, Cocaine, the Press & ‘Project Truth’](#)

[Review: Manufacturing Consent—The Political Economy of the Mass Media](#)

[Review: The Age of Missing Information](#)

[Review: Fog Facts –Searching for Truth in the Land of Spin \(Nation Books\) \(Hardcover\)](#)

[Review \(Guest\): Propaganda—The Formation of Men’s Attitudes](#)

[Review: Rule by Secrecy—The Hidden History That Connects the Trilateral Commission, the Freemasons, and the Great Pyramids](#)

[Review: Weapons of Mass Deception—The Uses of Propaganda in Bush’s War on Iraq](#)

[Review: Weapons of Mass Instruction](#)

I also particularly recommend the book below by John Lewis Gaddis — history is a “denied area” because everyone lies. The USA did not win the War of Independence nor did we win WWII.

[Review: The Landscape of History—How Historians Map the Past \(Paperback\)](#)

More recently Matt Taibbi has offered this book that I have reviewed:

[Review: Hate Inc. Why Today’s Media Makes Us Despise One Another by Matt Taibbi](#)

And this book surprised me but I find it absolutely credible. The British (in the USA, represented by the Pilgrim Society as well as MI-5 and MI-6) and the Zionists are the main enemy, not the Chinese, Iranians, or Russians.

[Review: TAVISTOCK INSTITUTE – Social Engineering the Masses by Daniel Estulin — Deep State Playbook](#)

In this context I want to mention false flag events and mind-control. A major failing of US law enforcement, apart from being completely corrupt at the top (90% good people trapped in bad systems but we have too many FBI, state attorneys, judges, and prosecutors who are being bribed or blackmailed) is that in a false flag event people might actually die, but without great discernment — and with a complicit treasonous media — it is too easy to embrace a totally false conclusion — witness 9/11 and Sandy Hook among others.

Learn more at <https://tinyurl.com/Steele-False-Flags>

On mind control it is very clear that CIA, NASA, and the Nazis, along with MI-5, MI-6, the Mossad and others including Chinese and Russian intelligence, are far advanced in creating zombies that will do whatever is desired and have no memory of it (although some start to remember if allowed to live past middle-age, one reason so many mind-controlled zombies are assassinated on site or shortly after they do what they were mind-controlled into doing. Here are a couple of links.

[Robert Steele: Itemization of Information Pathologies](#)

[Reflections on Information Pathologies & Organizational Intelligence — Why Predictive Analytics on Industrial Era Data is Fraud, Waste, & Abuse](#)

[Mike Lofgren: The Sleep of Reason Breeds Monsters – the Failure of American Public Institutions Enabled by the Collapse of American Public Intelligence](#)

Here in the USA it is now legal for the Executive — particularly the Department of Defense — to lie to Congress about how it is spending money. The Department of Justice is on record as saying it has the right to lie to the Courts whenever it wishes in relation to “national security.” And Barack Obama modified the Smith-Mundt Act to make it legal for the US Government to lie to the public inclusive of false flag events such as the Federal Emergency Management Office (FEMA) and the Mossad and CIA/FBI were conspiring to do under Dr. James Fetzer and I created enough of a backlash including documents to the White House, Congressional Committees, and the Attorney General, that put them on notice of liability in the future.

<https://tinyurl.com/911-POTUS>

<https://tinyurl.com/SH-POTUS>

Social media, created by, funded by, and manipulated by the Department of Defense and the CIA, among others inclusive especially of the Mossad and its unregistered treasonous agent the Anti-Defamation League (ADL), is now being exposed — as is the Mainstream Media — as a house of cards — they lie about everything.

In my view the challenges boil down to four:

- Having a holistic analytic model that integrates true cost economics
- Asking the right question with a reasoned context
- Collecting all or most of the information in all relevant languages and mediums
- Having a process to detect errors, lies, and subtle manipulation

It is much easier to lie and manipulate in the digital domain because it is so easy to create bots and deep fake videos and so on. The analog domain is in the intermediate domain — forgeries, crafted fake narratives, and more.

It is the human domain — “ground truth” — where it is easiest to get at the truth and the nuances of the truth. The problem is that humans are complicated and time consuming and intelligence agencies as well as government agencies are LAZY and generally not subject matter experts and not particularly discerning.

The standard in Washington today is pay to play — the facts don't matter. This makes it much easier for those who could not muster the facts nor defend a narrative to get by within the range from incompetence to treason.

I have been very disappointed by the lack of intelligence and integrity in the US secret intelligence community these past 40 years but I now realize that is by design. They were created to be a servant to the Deep State, not to the public. I credit Admiral Michael S. Rogers, then Director of NSA, with breaking the death and treason spiral of which then CIA Director John Brennan was the top representative in service to then President Barack Obama who will never achieve the heights of treason that characterize the career of Dick Cheney, but who disgraced the White House and the USA in a manner most foul.

[Review: VICE–Dick Cheney and the Hijacking of the American Presidency](#)

Admiral Rogers — and General Flynn — should receive the Medal of Freedom. The Great Awakening would not have been possible without both of them.

My answer does not do your question justice, but it is a start. If you want a context — a sense of what is possible to grasp if you cast a wide enough net and have an open mind, watch the 90 minute movie below, also available at this link as graphics with planned remarks:

<https://tinyurl.com/Steele-Top-Books>

A US Open Source Agency based at Fort McNair with nodes at McDill AFB and Dam Neck (SEALS, 2nd Fleet, NATO ACT) and military to military nodes in Copenhagen (Arctic focus), Ecuador, India, and Turkey, among other locations, is the essential next step.

<https://tinyurl.com/PBI-Invite>

Answers on OSINT for India 11 – Sample Open Source

Sir,

I came across this by chance.

[Using Open Source Intelligence \(OSINT\) to show how IAF's Abhinandan shot down a Pakistani F-16](#)

My own view is as follows:

Negative:

1. Too many adverbs and adjectives. It should always be in nouns and verbs. This degrades the veracity of the report.
2. No need to mention unnecessary details like the Geneva Convention.
3. Asif Gafoor's Twitter Handle has been long known to disseminate mis-information, thus unreliable source.
4. Graphics would have handled the report in a better manner. It would have helped to arrange the incidents chronologically, for example twitter posts. The existing graphics are good for background but too complicated for an end-user seeking rapid understanding.
5. No analog and print sources used.
6. Israeli pilot. Shows the presence of misinformation.

Positive:

1. Corroborated by SIGINT.
2. Large number of input videos.
3. Great details about weapon systems.
4. The researcher is an aviation expert. (Former IAF Pilot) thus increasing credibility.

From my point of observation there seems to be a blur between OSIF and OSINT that demands clarification. Also, most of the reports publicly available look as if Open Source has been used to 'Reverse Engineer' what is already been known through closed sources. A comparative analysis is missing.

Colleague,

Your commentary is superb.

I have four reactions:

01 This is an excellent piece of OSIF, not OSINT, ably mapped and illustrated but mindful of your very thoughtful critical comments above.

02 It is largely worthless for its intended purpose, most people won't get past the first paragraph. This would have been best as a one pager with two graphics (one map, one image) followed by a supplemental exposition.

03 Deep fake video and imagery is too easy to make these days so the sophisticated examiner will be cautious

04 Without talking to the humans actually involved in the event this is passive OSIF not active OSIF. short videos from actual ground observers or surviving pilots would have

On your concluding observation I would say two things:

First, I reiterate, it is not OSINT unless it is answering a specific question from a specific HUMINT decision-maker. Anything that does not do that is OSIF.

Second, I completely agree that OSINT produced by government elements or the contractors working for the government (as well as academics working for the Deep State as well as the government) should be suspect. Any OSIF or OSINT product that does not include both human sources and foreign language perspectives is in my view suspect. I would also add that secret collection platforms are too easily fooled (e.g. SIGINT by Israeli "talking rocks" and HUMINT as well as IMINT by outright fabrication). OSINT that purports to convey secret insights is in my view a bastardization of the discipline and fraught with danger.

[2020/11/28](#)

Answers on OSINT for India 12 – RAND on Passive Online

Sir,

I find this document useful to furthering our discussion.

[RAND: Defining Second Generation Open Source Intelligence \(OSINT\) for the Defense Enterprise](#)

Colleague,

The document is beneath contempt. It is an unprofessional attempt to play to the wrongful definition of OSINT as passive online monitoring.

How RAND can produce a document on OSINT without citing me or any of the 800 experts (e.g Arno Reuser, Mats Bjore, Ben Harrison) is proof positive that my vision and deep knowledge has been and continues to be deliberately blocked by people who in the future should be themselves blocked for treason against the Republic. In the information era, lies of both commission and omission are treasonous at worst, tortious interference with good governance at best. The deliberate lack of intellectual integrity by these people is harmful to the public interest and to our President.

See Instead:

[Smart Nation Vision – By Invitation](#)

Answers on OSINT for India 13 – The Burundi Exercise

Sir,

Please give something comprehensive about your Burundi experience.

Dear Colleague,

My report on this is here:

[Reference: Open Source Burundi Exercise](#)

However, there are a couple of graphics additional that I offer below

Steele, Robert. "[Open Source Intelligence: Executive Overview](#)," Perth, AU: Conference on Open Source Intelligence, Keynote Presentation, October 16, 1998 Graphic 23:

THE BURUNDI EXERCISE

- COMMISSION ON INTELLIGENCE (USA)
- ONE MAN, ONE ROLODEX, ONE DAY
 - Flag/CEO POL-MIL Briefs (Oxford Analytica)
 - Journalists on the Ground (LEXIS-NEXIS)
 - World-class academics (Inst. Sci. Info.)
 - 1:100,000 combat charts (Soviets via Eastview)
 - *Tribal* OOB and historical summary (Jane's)
 - 1:50,000 combat imagery (SPOT Image)

23

Steele, Robert. "[Open Source Intelligence & Relevant Information: Executive Briefing \(CINC Brief\)](#)," Tampa, FL: US Special Operations Command, Personal for General Peter Schoomaker, Commander-in-Chief, 1997, Graphic 5:

BURUNDI EXERCISE: 6 Phone Calls

- Top Ten Journalists/Top Ten Academics
- Tribal Orders of Battle and AOs
- Pol-Mil Overviews
- Soviet 1:100,000 Combat Charts
- 100% Commercial Imagery <3 Years Old

What is really really important here are two things:

First, that I knew who knew, and CIA did not.

Second, that I had their emails and telephone numbers and was able to mobilize their fullest professional efforts overnight.

OSINT is HUMINT. OSINT is about knowing who knows and being able to create NEW knowledge TAILORED to the question OVERNIGHT.

CIA still does not get that and neither do the military intelligence nodes.

In passing here are four core lectures for the Italian military, which honored me by translating my first book into Italian with a Foreword by a past president of Italy.

Steele, Robert. "[Analysis: All-Source Analysis, Making Magic](#)," Rome, IT: Military Intelligence Academy, March 2004.

Steele, Robert. "[Collection: Know Who Knows](#)," Rome, IT: Military Intelligence Academy, March 2004.

Steele, Robert. "[Processing: Make the Most of What You Know](#)," Rome, IT: Military Intelligence Academy, March 2004.

Answers on OSINT for India 14 – OSINT & Other Disciplines

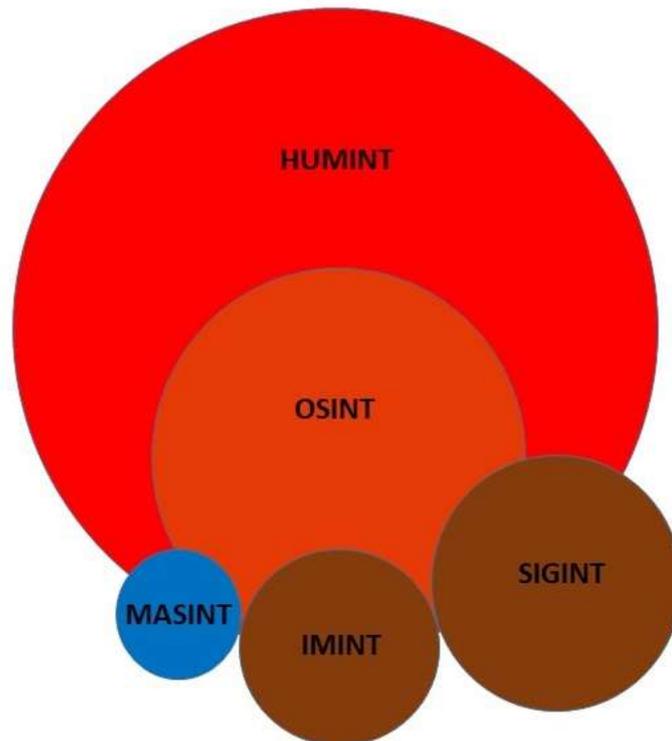

Sir,

A possible illustration seeking to relate OSINT to HUMINT particularly and other disciplines as well. Edit if needed please.

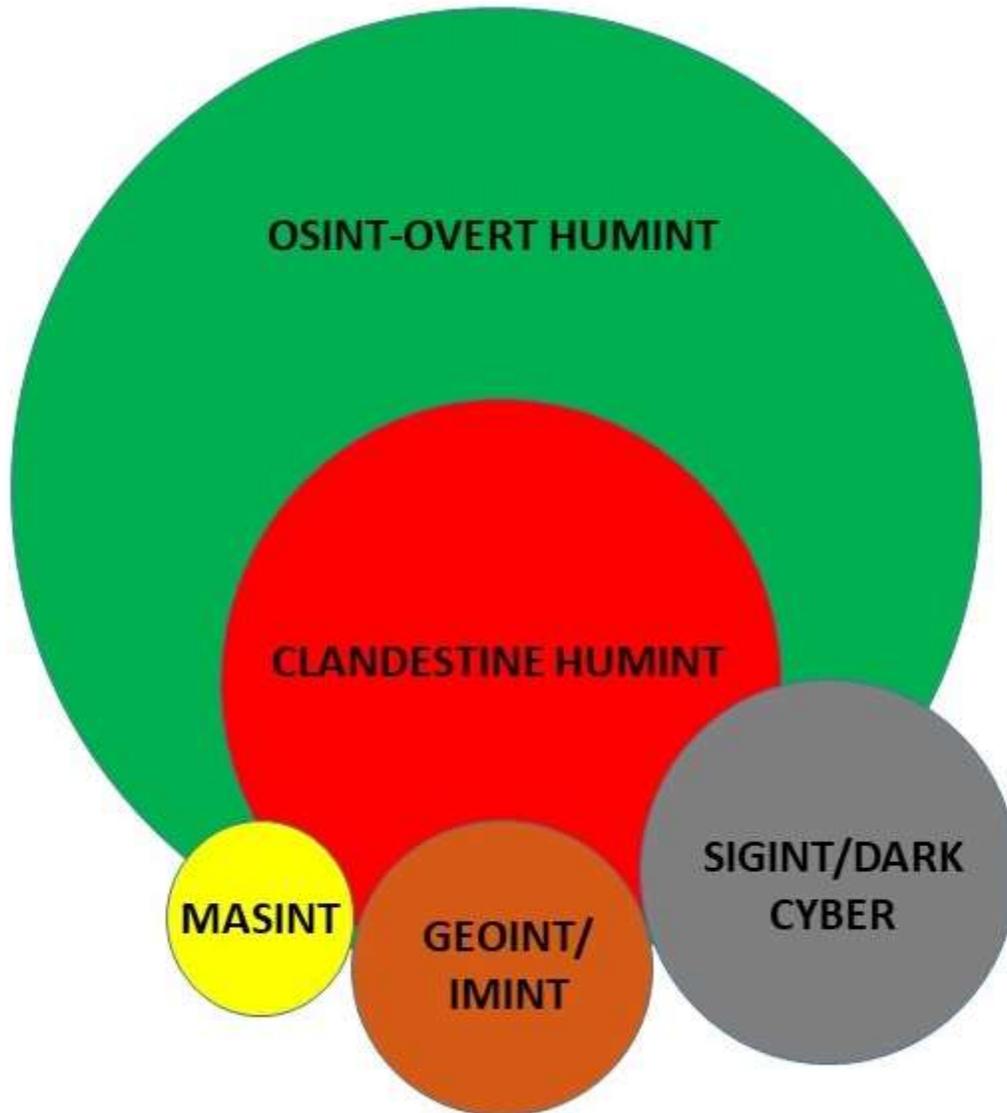

Dear Colleague,

You provided this illustration:

This is an interesting depiction, from the perspective of a professional in India, in part because it reflects the traditional importance of HUMINT over the three technical disciplines (the Americans distinguish between GEOINT and IMINT as time when IMINT is being rapidly degraded by commercial options and GEOINT is not living up to its potential for lack of inter-disciplinary time and space tagging).

Now after your helping me better understand the context in India and the shortfalls of our American system with unlimited funding for unproductive technology,, I recommend you adapt your model to the following:

If you examine the Herring Triangle (Jan Herring was the first modern OSINT pioneer in US secret intelligence world, as the National Intelligence Officer for Science & Technology, or NIO S&T), you will intuit that OSINT — at very low cost — makes the existing clandestine HUMINT capability twice as productive, while narrowly focusing the technical capabilities that should always be in direct support of HUMINT, not running off on their own.

BACKGROUND INFORMATION

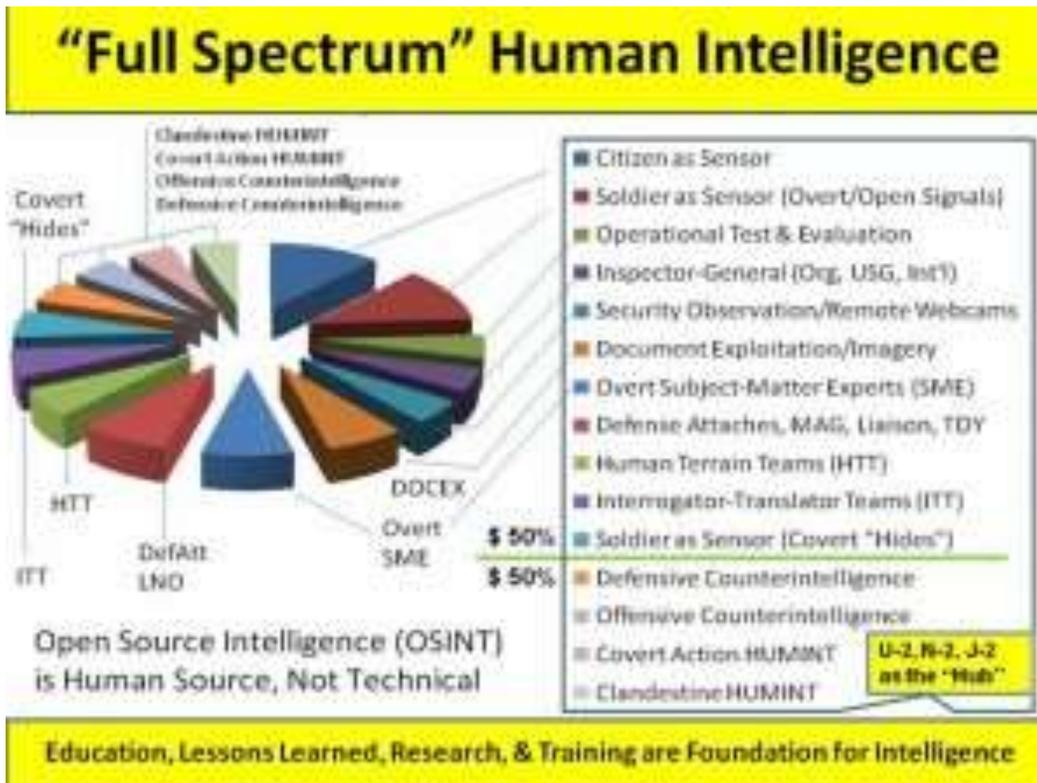

I would be very comfortable with the above depiction as a starting point but I encourage you to consider the below graphics as you contemplate three major questions:

01 Should intelligence be driven by REQUIREMENTS (what do ALL of our customers need to know) or COLLECTION (how can we justify ever increasing budgets by collecting shit we don't process hence that makes no difference)?

02 Should OSINT be what Joe Markowitz and Paul Wallner, in their most memorable contribution to the failed discipline, called "the source of first resort"? This was the conclusion the Dutch came to when Arno Reuser was the OSINT master for the Dutch military, he is still available to help India.

03 Has the time come to end the stove-piping of collection? Do we need to integrate all of the disciplines at the tactical, theater, national AND multi-national levels?

Never forget these two graphics which are very pro-military as a central management construct.

The military is the “natural” network within which to manage global to local intelligence and counterintelligence BUT the military is also a retarded organization in which the higher the rank the more clinically insane as well as oblivious the officer becomes — they confuse authority with integrity.

Consider:

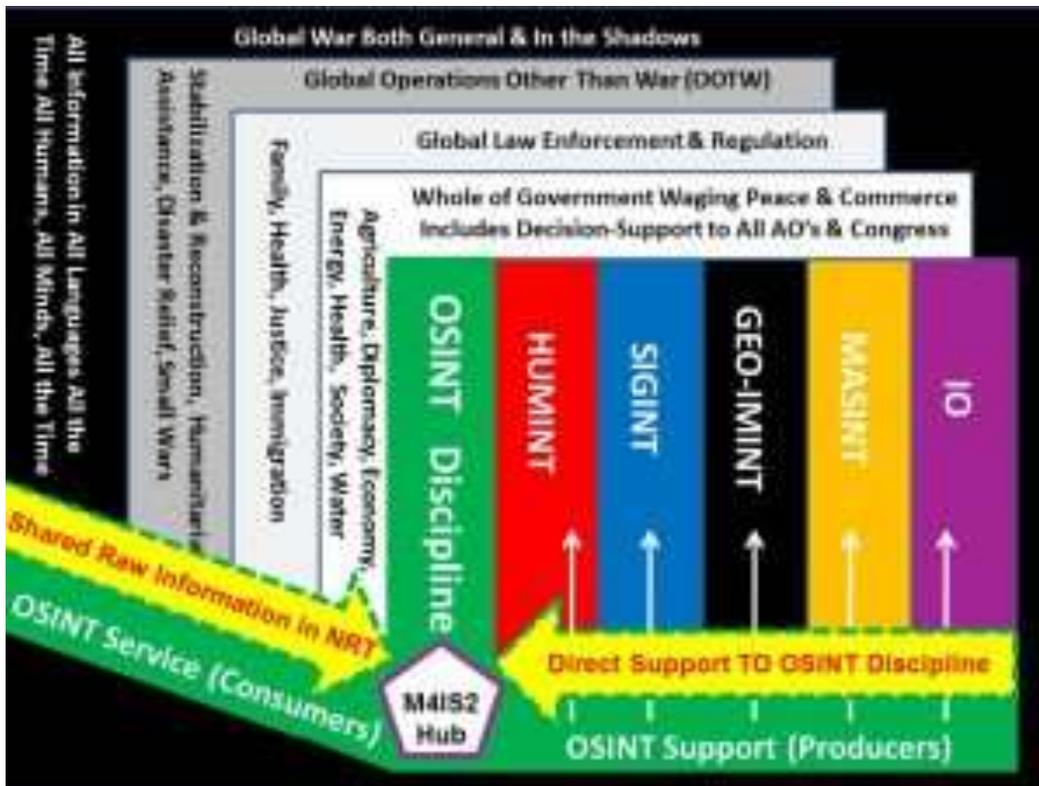

Where Did We Go Wrong? How Do We Leap Ahead NOW?

Levels of Intelligence Investment

I have been pioneering in this area — with a holistic mind-set not to be found within the secret world, the Cabinet, or the White House, since 1988 officially, with holistic model development in my past back

to 1974 (multinational home and host country issues), 1976 (pre-conditions of revolution), and 1987 (strategic mis-management of national security information).

I was very glad to have a tour in the Advanced Program and Evaluations Group in the Collection Requirements and Evaluations Staff (CRES/APEG) at CIA, and very sad when Sandra Cruzman (RIP) said of the below article to Ross Stapleton-Gray, "this confirms Steele's place on the lunatic fringe. She meant well but she did not know what she did not know — typical of secret "bosses."

Steele, Robert. "[E3i: Ethics, Ecology, Evolution, & Intelligence](#)," *Whole Earth Review*, Fall 1992, pp. 74-79.

It is worth noting that I understood all of this in 1988 from a military perspective, and that my boss in CRES/APEG, Boyd Sutton (RIP) ultimately agree with me by 1997. Here are core military oriented references.

[2006 Sutton \(US\) Global Coverage, Looking Backward, Looking Forward](#)

[2000 ONE WORLD, READY OR NOT: From National Capabilities to Global Coverage Through a Virtual Intelligence Community Coordinated by NATO/PfP](#)

[1997 Sutton \(US\) The Challenge of Global Coverage](#)

Steele, Robert. "[Intelligence Support for Expeditionary Planners](#)," *Marine Corps Gazette*, September 1991, pp. 73-79.

Steele, Robert. "[Applying the 'New Paradigm': How to Avoid Strategic Intelligence Failures in the Future](#)," *American Intelligence Journal*, Autumn 1991, pp. 43-46.

Steele, Robert. "[Intelligence in the 1990's: Recasting National Security in a Changing World](#)," *American Intelligence Journal*, Summer/Fall 1990, pp. 29-36.

Gray, AI (Ghost-Written by Robert Steele), "[Global Intelligence Challenges in the 1990's](#)," *American Intelligence Journal*, Winter 1989-1990, pp. 37-41.

The people managing our national intelligence enterprise are corrupt and retarded and they like it that way because they are not held accountable for being virtual traitors, in constant betrayal of the President as well as the public.

Study the New Rules for the New Craft of Intelligence that I refined. They have been ignored since I formulated them in 2002 because no one holds all these entitled assholes accountable for being failures.

Steele, Robert. "[New Rules for the New Craft of Intelligence](#)," in Robert David Steele, [The New Craft of Intelligence: Personal, Public, & Political—Citizen's Action Handbook for Fighting Terrorism, Genocide, Disease, Toxic Bombs, & Corruption](#), Oakton, VA: Open Source Solutions, Inc., 2002, Chapter 15, pp. 147-161.

New Rules for the New Craft of Intelligence

001 Decision-Support is the Raison D'être

002 Value-Added Comes from Analysis, Not Secret Sources

003 Global Coverage Matters More

004 Non-Traditional Threats Are of Paramount Importance
005 Intelligence without Translation is Ignorant
006 Source Balance Matters More
007 "Two Levels Down"
008 Processing Matters More, Becomes Core Competency
009 Cultural Intelligence is Fundamental
010 Geospatial and Time Tagging is Vital
011 Global Open Source Benchmarking
012 Counterintelligence Matters More
013 Cross-Fertilization Matters More
014 Decentralized Intelligence Matters More
015 Collaborative Work and Informal Communications Rise
016 New Value is in Content + Context + Speed
017 Collection Based on Gaps versus Priorities
018 Collection Doctrine Grows in Sophistication
019 Citizen "Intelligence Minutemen" are Vital
020 Production Based on Needs versus Capabilities
021 Strategic Intelligence Matters More
022 Budget Intelligence Is Mandatory
023 Public Intelligence Drives Public Policy
024 Analysts are Managers
025 New Measures of Merit
026 Multi-Lateral Burden-Sharing is Vital

OSINT is HUMINT.

OSINT/HUMINT are the foundation and the core for all-source INTEL.

The technical disciplines should be in SUPPORT of OSINT/HUMINT:

- a. NSA should be providing tactical near real time SIGINT to clandestine operations overseas and counterintelligence operations at home, inclusive of 100% processing on traitors elite pedophiles, and white collar (Wall Street) criminals.
- b) The All-Source Analyst should have an Open Source Agency (OSA) and global network of local to global subject matter experts on call as a starting point for addressing every requirement.
- c) The secret disciplines should not be triggered on any challenge unless
 - c1) The OSA says it is falling short AND
 - c2) The customer certifies that the cost and risk of classified collection is warranted in the absence of an OSINT answer.

I no longer favor cutting the secret world in half. I now favor consolidating everything under a restored DCI, and redirecting one third to Global Coverage or Third World issues including the Arctic; and one third to domestic commercial and trade needs along with RUTHLESS counterintelligence against corrupt state and local officials bribed and blackmailed by the Deep State.

I continue to consider it vital to harness national intelligence toward the strategic goal of creating a Smart Nation. No one in Washington gives a shit about creating a Smart Nation that is prosperous for the 99% and at peace with the rest of the world, with the possible exception of Donald Trump and a few of this trusted people including Mike Flynn.

Just as you are thinking about how OSINT fits with the classified disciplines, you need to be thinking about how the military fits within Whole of Government and how Whole of Government fits within a Smart Nation, a World Brain, and restored localized self-governance for localized prosperity.

Steele, Robert. "[Threats, Strategy, and Force Structure: An Alternative Paradigm for National Security](#)," in Steven Metz (ed.), *Revising the Two MTW Force Shaping Paradigm*, Carlisle, PA: Strategic Studies Institute, U.S. Army War College Press, 2001, Chapter 9, pp. 139-163. Posted on [2020/11/29](#)

Answers on OSINT for India 15 – C4I2STAR, Diamond vs. Linear, M4IS2 vs. Unilateral

Sir,

What is C4I2STAR (and its Permutations and Combinations)>
Will OSINT follow M4I2 model or the old C4 model?

Why does OSINT Intel Cycle differ from the generic intel cycle? (Diamond Model vis-a-vis the Old Model)

Dear Colleague,

C4I2STAR is a sucking chest wound. The Chinese, Iranians, and Russians can neutralize all satellites at any time. We have not planned for this.

C4 generally stands for Command, Control, Communications, and Computes;

I2 generally stands for Intelligence and Inter-Operatbility;

STAR stands for *Surveillance*, Target Acquisition, and *Reconnaissance*.

At this time, absent my being given the Open Source Agency (OSA), there is no future for OSINT or M4IS2 which stands for Multinational, Multiagency, Multidisciplinary, Multidomain Information-Sharing and Sense-Making. I am not agonizing over this, I will focus on Web 3.0, but the President will pay a huge opportunity cost in foregoing an OSA as only I can create, quickly.

Below you will find more detail from 2009.

[Definitions: M4IS2 \(Multinational, Multiagency, Multidisciplinary, Multidomain Information-Sharing & Sense-Making\)](#)

The C4 model is dead. The USA cannot win a war against a peer competitor (China or Russia) or even a top flight asymmetric competitor (Iran). The USA has been gutted from within by the UK and Israel; we have been looted and all of our C4 systems have back doors and massive vulnerabilities at the same time that we lack intelligence and integrity.

[1994 Sounding the Alarm on Cyber-Security](#)

[Berto Jongman: US National Security Achilles Heel – Electromagnetic Spectrum’s Vulnerability to Being Fried](#)

[Chuck Spinney with Pierre Sprey & Winslow T. Wheeler: Bankrupt and Irrelevant – the Presidential Debates and Four Recent Studies on Pentagon Spending](#)

The diamond paradigm is a classic example of perjury from my work. Here is my original depiction of the diamond paradigm at a conference in Canada subsequently included in a special issue of Intelligence and National Intelligence as well as a book. This idea was so well-regarded at the time that it was

selected for inclusion in the conference high points as presented at the end of the conference by a senior government official and discussant.

Steele, Robert. "[Private Enterprise Intelligence – Its Potential Contribution to National Security](#)," *Intelligence and National Security*, 10/4, October 1995, pp. 212-228.

The most obvious reason why I conceptualized my original development of the Diamond Paradigm since stolen from me without attribution is two-fold:

First, because OSINT sources are open, there is no risk to having them speak directly to the customer.

Second, in the modern era of intelligence that I address in the chapter and article below, decision-support must move toward being both near-real time and holistic with integrated true costs economics. The secret world and the Cabinet both fall short.

Lastly, I find that most customers will not do "requirements" that have to be specified and written down but they will have a conversations with a top expert and that conversation will be NUANCED — it will yield new questions and new answers not available in print or online tailored to the need. Such conversations should be organized by the all-source analyst, recorded if possible, and entered into an in-house database of RESTRICTED OSINT.

Steele, Robert. "[The Evolving Craft of Intelligence](#)," in Robert Dover, Michael Goodman, and Claudia Hillebrand (eds.). *Routledge Companion to Intelligence Studies*, Oxford, UK: Routledge, July 31, 2013.

Steele, Robert. "[Healing the Self & Healing the World: The Open Source Way](#)," *Phi Beta Iota Public Intelligence Blog*, 2 September 2017 no longer available where previously published in *Defence and Intelligence Norway*, 13 September 2017.

This is a useful related national-level overview:

Steele, Robert. "[Reinventer Le Renseignement: Vision et Strategie / Reinventing Intelligence: The Vision and the Strategy](#)," *International Defense & Technologies*, December 1995.

All of these people, both within the US secret government world and the contractors and think tanks that feed at public expense on secret dollars, lack intelligence and integrity (I speak of the influencers including RAND, not of the 90% good people trapped in a bad system). They steal from my work with impunity while also refusing to recognize that I have been 30 years ahead of the pack and that implementing my ideas would radically accelerate the reinvention of national security, intelligence, and engineering (national prosperity at a local level).

Posted on [2020/11/30](#)

Answers on OSINT for India 16 – Four Levels (Strategic, Operational, Tactical, Technical) — And Importance of Domestic Domain Intelligence

Sir,

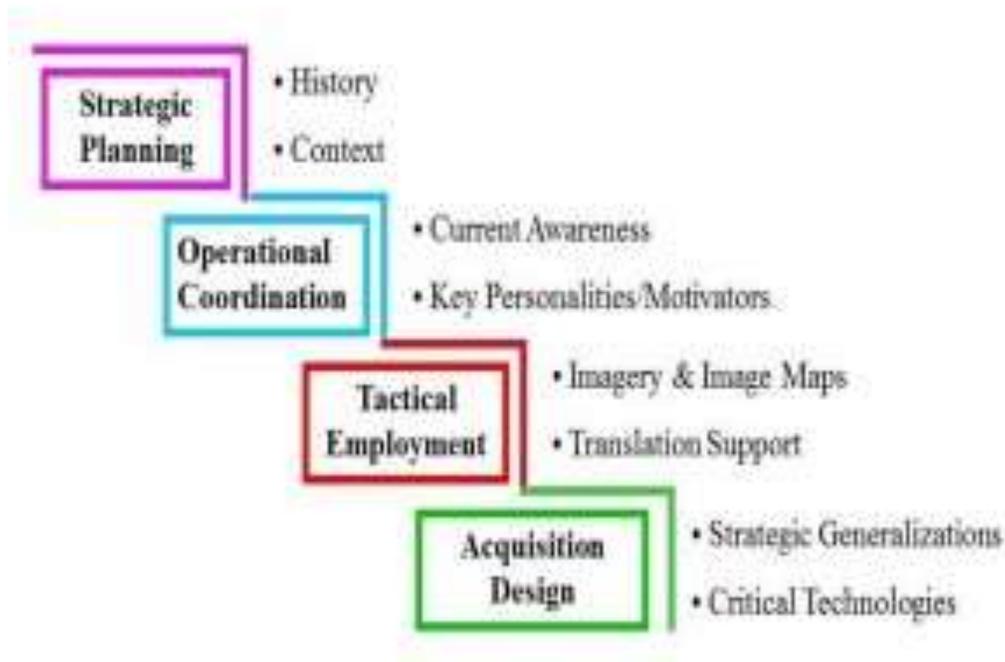

The military thinks in terms of four levels — strategic, technical (acquisition), operational or theater, and tactical. Have you addressed in any detail how OSINT can enhance military decision-making at each of those four levels?

You keep referring to a Smart Nation. In one interview with IEEE you have a very interesting graphic of four levels (tactical, technical, operational, strategic) all combining to create a Smart Nation.

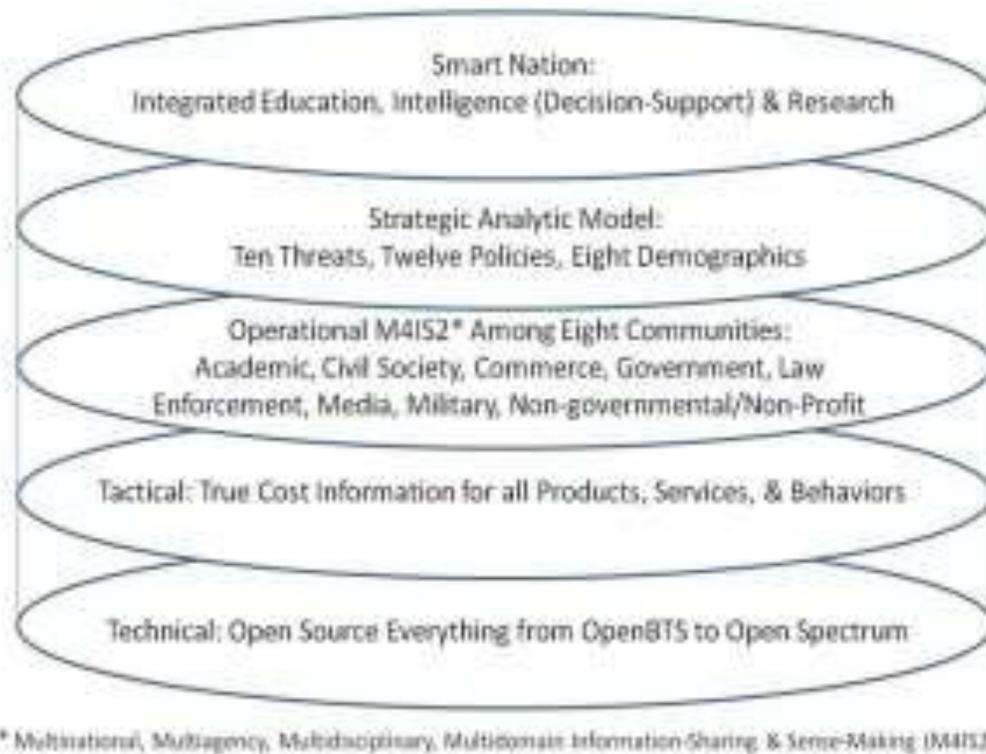

Can you expand on these with particular reference to your concept for the military as the core force for Whole of Government strategy, policy, operations, and acquisition?

Dear Colleague,

You appear to be referring to these two graphics and their source:

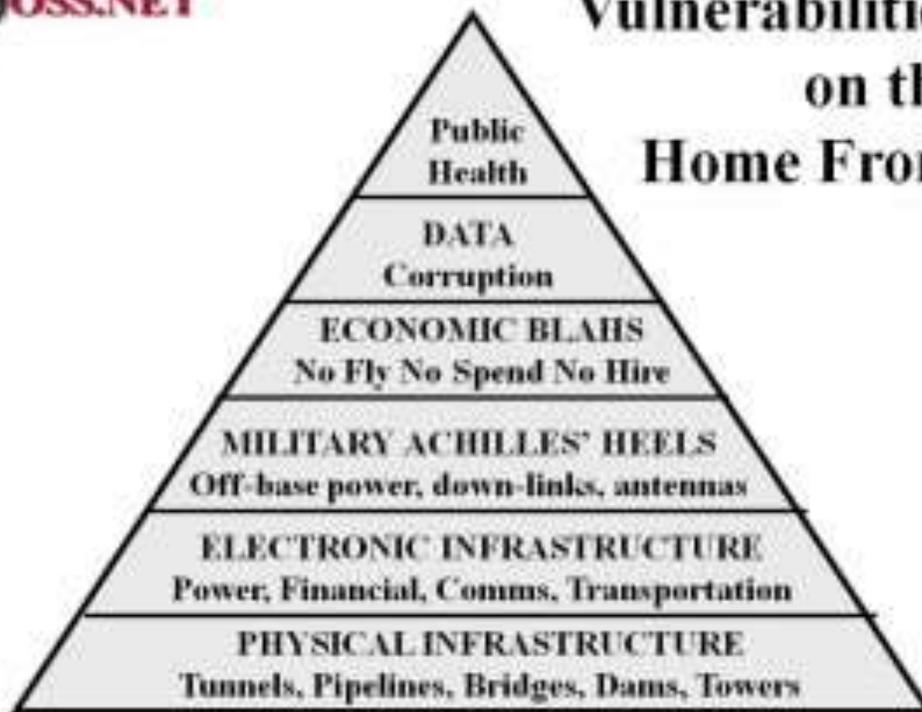

Steele, Robert. "[Open Source Intelligence & Relevant Information: Executive Briefing \(CINC Brief\)](#)," Tampa, FL: US Special Operations Command, Personal for General Peter Schoomaker, Commander-in-Chief, pending confirmation of exact date.

Steele, Robert with Hal Berghel. "[Out of Band: Robert David Steele on OSINT](#)," *IEEE Computer* Vol. 47, No. 7, July 2014, pp. 76-81.

I am going to add two more images.

Vulnerabilities on the Home Front

Steele, Robert (2002). [*The New Craft of Intelligence: Personal, Public, & Political—Citizen's Action Handbook for Fighting Terrorism, Genocide, Disease, Toxic Bombs, & Corruption*](#), Open Source Solutions, Inc., April 8, 2002.

Created at Grey Communications with our intelligence to access intelligence without communication is essential. (see Director's guidelines). We've spent 50 years on the T in IT, now it is time we spend 50 years on the I in IT.

World Brain Pyramid

[Graphic: OSINT Global Pyramid from OSIS-X to Intelink-X](#)

You and I have talked off-line and I understand that you are focused on OSINT in support of national security and that India does not employ “intelligence” for domestic fields such as agriculture, education, etcetera. You are focused on training professionals to do OSINT for national security purposes. To that end I recommend the [NATO OSINT Handbook](#) that I would love to see you update, and the other OSINT Handbooks from various sources that I point to as well as the Historical Contributions from my 800 or so professional OSINT speakers.

- [Handbooks](#) (70)
 - [Analysis](#) (14)
 - [C4/JOE/Software](#) (4)
 - [HUMINT](#) (12)
 - [Law Enforcement](#) (14)
 - [Military](#) (19)
 - [OSINT Generic](#) (19)
 - [Stabilization](#) (22)
 - [Threats/Topical](#) (14)

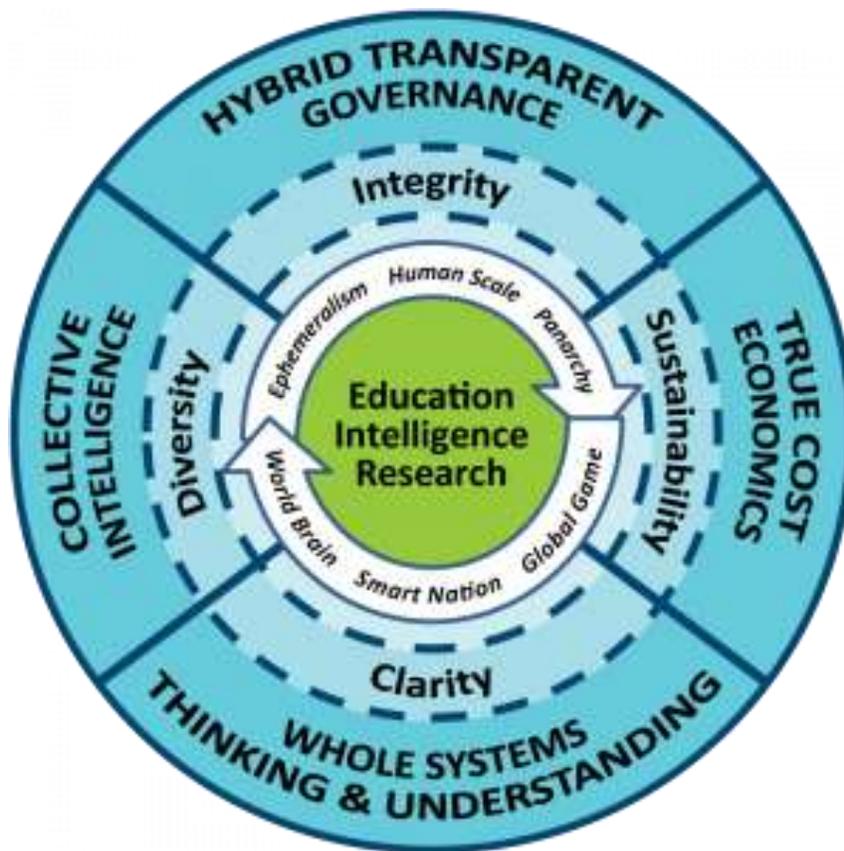

- [UN/NGO](#) (22)
- [Historic Contributions](#) (253)
 - [Directory \(List\)](#) (1)
- [History of Opposition](#) (14)

The core point for me — and I recognize that this does not fit with the totality of your context — is that OSINT is not only vital for the military in relation to each of the four levels — the first graphic is where General Peter Schoomaker, USA, then CINCUSCOP stopped the briefing and told his Deputy “do it — I want an OSINT branch in the J-2 and I want OSINT taught in all SOF schoolhouses” — but that OSINT is the common element for creating a Smart Nation that is both prosperous and at peace.

It does no good at all to have a strong military while the twelve core policies are in disarray and China is eating your lunch while Pakistan and Bangladesh nibble away on the edges.

“A Nation’s best defense is an educated citizenry.” Thomas Jefferson said that. I would add “and prosperous as well as armed.

I won’t belabor the point. Below is the graphic that sums up my life’s work and my vision for an Open Source Agency with an Information Bureau and an Open Source Everything Engineering (OSEE) Bureau that helps Make America Great Again at a fraction of the cost of the failed predatory Western model that is 50% waste and 90% profit for the banks.

The military — and military C4I2STAR morphed toward M4IS2 — should be the beating HEART of the nation and should be the CORE for addressing all threats including threats to agriculture, energy, health, and water; and it should be the CORE for Whole of Government interaction with the rest of the world.

If you look at this graphic below again, it may show the utility of OSINT not only across the four levels, but across all functions — agriculture, for example, can be sabotaged; water can be stolen (as in Kashmir). It is in my view not possible to do “national security” without also doing counterintelligence across all domestic policy domains, and strategic planning across all domestic domains, one reason why I would have the OSA support an Inter-Agency Development Command and a Peace College.

Answers on OSINT for India 17 — Levels of Online Access, 1% of 1% Total Access — With Stephen E. Arnold

Dear Colleague,

Further to your earlier question about the totality of the information ecology and my firm view that most of what is being done online is worthless, here are two graphics, one from my virtual CTO Stephen E. Arnold, and another from myself.

Learn more from Stephen E. Arnold at <http://arnoldit.com/wordpress/>.

Here is my own graphic, developed when I was trying to show a major company how much they were missing.

- X - 1% of WRITTEN Scientific Papers are PUBLISHED
- X - Perhaps 1% of PUBLISHED Papers are ACCESSED generally only in host language
- X - Perhaps 1% of 1% of non-English language unpublished papers are accessed
- X - Perhaps 1% of 1% of gray literature (off-line) knowledge in English is accessed
- X - No global index of subject matter experts on all topics in all languages at all levels
- X - No means of networking all local residents as part of a national "brain" across all topics

1% collected of 1% online of 1% published of 1% known is: .00000001. This is hardly impressive for any intelligence organization, government, or major institution.

The schematic on the right is the "web of knowledge" created by my colleague Richard Klavans who is the most skilled person I know at creating — with his team — maps of knowledge, see for instance:

http://scimaps.org/mapdetail/maps_of_science_fore_50/

How the US Government approaches science & technology is RETARDED, and they are even worse at social science and non-existent in the humanities. We do not do holistic analytics (including cultural and social benefits and costs) and we do not do true cost economics or the opportunity cost of staying with the failed Western economic model that is 50% waste and 90% profit for the banks, instead of the Open Source Everything Engineering (OSEE) model that delivers a prosperous world at peace for 10-20% the cost of the failed model.

Answers on OSINT for India 18 – Why Does Information Exist? The Death of Knowledge? Video with Stephen E. Arnold

Sir,

Why is info available publicly?

Why do people expose their info?

Please send some behavioural analysis.

Hardly does anyone ask these most generic and basic questions

Dear Colleague,

This is what I would call an existential question, and so very interesting to me that I prevailed on my virtual CTO (Chief Technical Officer) to have a conversation about it with me. That video is below.

DOC (10 Pages): [Arnold and Steele on Information Death of](#)

[Knowledge](#)

Learn more from Stephen E. Arnold at <http://arnoldit.com/wordpress>

A transcript will be available tomorrow. Here is a graphic on the eight tribes that have reasons for publishing, mostly lies and half-lies. Knowledge is dead.

Answers on OSINT for India 19 – Academic Take on OSINT — 20% Value 80% Not — and on Value of Sharing Information

Sir,

What is this paper all about?

And in relation to your first answer, isn't this data too critical to be shared with the public?

PDF (25 Pages): [Academic Open Source Educational Resources](#)

Dear Colleague,

20% of this paper is useful. As you yourself pointed out to me, this opened up your mind by directing your thoughts toward reviewing the potential OSINT sources in South Asia and China. While you were also searching for some map which will depict the number of newspapers or journals etc in South Asia and China.

These people have no idea how wrong they are in mis-appropriating the term OSINT for what is a bastardization that combines weak academic practices with shallow online sources.

They are recycling stuff I pioneered and others stole without understanding that their charts are largely worthless by being out of context from the larger body of knowledge most of which is not online and much of which is not published at all — i.e. original HUMINT that must be elicited one mind at a time.

On balance this is another drunk (three drunks) under the streetlamp looking for car keys that are far far away from where they are. They are not using the term OSINT correctly. Any article that does not mention my work or the term "citation analytics" is stupid by definition. These people have good intentions but they are playing in the mud of what is free online and also completely oblivious to the fact that we are losing the equivalent of a Library of Alexandria every day as peer reviewed journals go offline, YouTube wipes out entire bodies of work, etcetera.

I found some of their links interesting but the reality is that only a subject matter expert combined with a trained information broker who is also a subject matter expert combined with a primary researcher who can tap into humans via telephone, email, video conference or in person, can get to the core knowledge.

Everything this paper is talking about is both superficial and suspect.

Below cost me \$30,000. Sadly DIALOG has been pressured to delete the RANK functionality that allowed the top experts to be identified for roughly \$1000 per search (e.g. poverty), I suspect the Institute of Scientific Information (ISI) or Dick Klavens would charge at least \$5000 per topic, not unreasonable for the value provided.

[2007 Earth Intelligence Network — Authors, Books, Centers, Forecasts](#)

2007 is a long way back.

If I had an open source agency with a multinational decision-support centre, these would not just be kept updated at the global level in each of the main languages, but at the national and provincial or state levels.

Also the published experts are a back door to the unpublished experts consisting of graduate students doing new work not published, and field or indigenous experts who are “doing” instead of writing.

You reacted to the above with concern about sharing information.

Alvin Toffler (RIP) was my friend and honored me with a chapter built around me “[The Future of the Spy](#)” in [War and Anti-War](#). In his book [PowerShift](#) he made the point that information is the only “good” that can be shared and still be retained by the original owner or creator.

In about 1994 I was in a Hackers meeting in California with Eric Hughes and John McCarthy (father of AI) among others and we talked about the value of sharing information. Our conclusion was that shared information is a MAGNET.

For every piece of information that I share I get back roughly 100 pieces of unsolicited information I would not otherwise have seen, 10 of which are useful to me.

That is both a 10-1 noise ratio in the return, and 10-1 value ratio in the end.

OSINT acquires value by being shared. The only exception is Black OSINT.

This is why an Open Source Agency must have a Multinational Decision-Support Centre with reachback to all militaries in the world, who in turn organize access to and sharing with their “eight tribes” of information at the national and province or state levels.

Data is not the new gold. Data is shit. DECISION-SUPPORT rooted in holistic analytics and true cost economics, in turn founded upon access to all information in all languages all the time, is the new gold.

Answers on OSINT for India 20 – Five Pillars of Verification

Sir,

Check the five pillars of Verification in the file. I find it quite useful for a paper that introduces OSINT.

PDF (29 Pages): [Verifying Online Information Digital AW](#)

Dear Colleague,

This is good basic stuff adapted from HUMINT standards. It is also largely worthless in that it does not help address the core question, which is knowing who knows and getting them to tell you with great honesty what they know.

Any “OSINT” product that is more than 20% rooted in online sourcing is useless.

Posted on [2020/12/01](#)

Answers on OSINT for India 21 – The Death of OSINT Since 2016?

Sir,

I have noticed that good OSINT literature is hardly available for 2013-2016.

Post 2016, OSINT has been treated as a synonym to internet surfing. Any reasons?

Dear Colleague,

OSINT was murdered in the mid-1990's when Deputy Director of Central Intelligence Bill Studeman and DDCI for Collection Charlie Allen allowed Joan Dempsey, then DDCI for Community Management, to virtually assassinate Dr. Joseph Markowitz (RIP) who had two good ideas: a marketplace for OSINT that all elements of the USG could access; and a Congressional Budget Justification Book (CBB) to illuminate all expenditures on OSINT, which is roughly several billion

dollars in waste today, and producing almost nothing of value.

<https://tinyurl.com/PBI-Invite> includes my two briefings for USDI that Dr. Markowitz helped me with. He and I also prevailed on OMB with the help of Don Gessaman, then ADD/NS, to create Code M320 I think it is, but this code, which is supposed to identify all monies being spent on OSINT, is not being enforced. An audit of just one contract, the National Ground Intelligence Center (NGIC) contract with BAE for \$400M would, I am quite sure, be an accurate measure of the waste and dysfunctionality of current OSINT practices in the USA.

Sadly, Admiral McConnell as DCI had an opportunity to fix OSINT — as did Keith Hall as Director of the NRO when questioned by Boyd Sutton — he provided the number that OMB accepted, \$10M for each of 200 topics not covered properly by secret intelligence — this totals \$2B a year — but McConnell was not willing to do the right thing. Today McConnell, Hall, and Dempsey all work for Booz Allen, which appears to be the Deep State's alternative "Continuity of Government" enterprise and in my view suspect.

The American public has been dumbed down by design since the 1920's when the Deep State took over the public education system to eliminate civics, critical thinking and later art, music, and physical education. In the 1970's academia was gutted with a complete dismissal of all standards such that both tenure track professors and students could earn PhDs and graduate for going through the motions and not actually producing original thinking.

In the 1980's the Zionists took over our communications and computing systems and advanced their hollowing out of our economy and society, see for instance

[Review: Robert Maxwell, Israel's Superspy—The Life and Murder of a Media Mogul](#)

In the 1990's CIA and DARPA created BigTech (FAANGY or #GoogleGestapo) and began the forceful fully funded development of an idiot public. This quote, from a woman I know who was in the room, is instructive:

What if Everything you have been told — is a lie?

["We'll know our disinformation program is complete when everything the American public believes is false."](#) William Casey, CIA Director 1981-1987

"I am the source for this quote, which was indeed said by CIA Director William Casey at an early February 1981 meeting of the newly elected President Reagan with his new cabinet secretaries to report to him on what they had learned about their agencies in the first couple of weeks of the administration. The meeting was in the Roosevelt Room in the West Wing of the White House, not far from the Cabinet Room. I was present at the meeting as assistant to the Chief Domestic Policy Adviser to the President."

Barbara Honegger

I joined CIA to steal the truth for my country. I turned down a job with Covert Action Staff and in retrospect realize I fortuitously turned away from the rabbit hole — CIA has become the core for lying about everything (while also trading in children, bribing and blackmailing US national and state and local officials, doing rendition and torture and drone assassinations with a 98% collateral damage and now known, manipulating US as well as foreign elections with Dominion and related software.

I continue to believe we need the CIA — purged of its criminals and traitors — but we need an Open Source Agency more. Such an agency would create Web 3.0 that cannot be censored, a Presidential truth studio and channel, and it would reinstate integrity with intelligence across all "eight tribes."

I had this nailed in 1988-1994 — the Deep State and its servants understood that everything I was recommending would elevate the 99% and the 1%.

- Steele, Robert. "[Intelligence Support for Expeditionary Planners](#)," *Marine Corps Gazette*, September 1991, pp. 73-79.
- Steele, Robert. "[Applying the 'New Paradigm': How to Avoid Strategic Intelligence Failures in the Future](#)," *American Intelligence Journal*, Autumn 1991, pp. 43-46.
- Steele, Robert. "[Intelligence in the 1990's: Recasting National Security in a Changing World](#)," *American Intelligence Journal*, Summer/Fall 1990, pp. 29-36.
- Gray, Al (Ghost-Written by Robert Steele), "[Global Intelligence Challenges in the 1990's](#)," *American Intelligence Journal*, Winter 1989-1990, pp. 37-41.

It should be a crime punishable by death to lie to the public.

[2020/12/01](#)

Answers on OSINT for India 22 – Offline OSINT

Sir,

There is hardly any guide available on offline OSINT.

Also I have been seeking for some map that can show the distribution of open source info (newspapers, journals etc) in South Asia and China.

Dear Colleague,

Each of the “eight tribes” has its own way of organizing guides or directories to offline information, but realistically, the one best guide is always human.

In the academic arena, depending on the country and the language, you have guides by research librarians, specialist information brokers, citation analytics, lists of new dissertations, and gray literature including market surveys

that are not sold to the public.

Most of what I see today is absolute crap.

Remember that books are generally ten years old (not counting the click bait books that are now rushed to press with self-publishing such as Amazon has made possible; good investigative articles now all too rare are roughly ten months in the planning and execution; and even newspaper articles are ten days old in the planning and execution.

And of course we now know that from Associated Press to Reuters to the New York Times to the major national newspapers around the world, real journalists are a dying breed and we have a mix of automated article production and Deep State servants producing crap for the masses.

Matt Taibbi offers an excellent appraisal of how the media has been destroyed:

[Review: Hate Inc. Why Today’s Media Makes Us Despise One Another by Matt Taibbi](#)

There are directories that are starting points, for example

[NewsBank: Asia’s Newspapers](#)

but please remember that journalists are allowed to publish at best 10% of what they know, and nothing that contradicts the “party line” being dictated by the Deep State or its political servant class.

There is no substitute for an “on the ground” presence and by “on the ground” I mean someone with intelligence and integrity who speaks the local language fluently and is able to move easily in the provinces. This immediately eliminates almost everyone in any given Embassy, whether US or other, and it also eliminates the baby spies now being trained to move around combat zones with idiot bodyguards in large black vehicles.

For any given country and any given topic you should be able to pull together, at a minimum:

- Academic person published in the local language
- Civil Society labor or religious leader in the local area
- Commercial manager with business in the local area
- Government official from the local area
- Law Enforcement official from the local area
- Media journalist responsible for writing about the local area
- Military officer from home country as well as other attaches traveling there
- Non-profit officials who are active in the local area.

Anything that does not rise to this standard is useless.

[2020/12/01](#)

Answers on OSINT for India 23 – OSINT for One or OSINT for All?

Sir,

The national security field as we define it does not include policy intelligence such as you seem to feel is needed for the twelve core policies that you identify — including local law enforcement — that are outside our “lane” called national security.

I cannot change this but wonder if you have a comment.

Dear Colleague,

I am delighted you are willing to ask this question.

I will start with my epiphany (the Republican word for “aha”) experience. Alvin Toffler and I were guests of honor at an informal lunch with military intelligence leaders after we had both spoken at the National Defense University. As we were

driving away Alvin turned to me and said

“They are stuck in their little green box.”

The below graphic instantly formed itself in my mind:

If I have learned anything in the past 30 years it is that you cannot do OSINT in isolation within a stovepipe without getting it wrong.

If I have pioneered anything in the last 30 years it is that OSINT done right demand holistic analytics across ALL threats, ALL policies ALL demographics and ALL languages as well as ALL mediums.

If I have recognized anything new in the past 30 years it is that secret intelligence cannot be relied upon unless it is bracketed by ruthless pervasive counterintelligence on one side and full spectrum OSINT on the other.

For the military to say they will do OSINT only on “their” domain is to commit intellectual suicide and fail before starting. I am well aware of RAWs successes over time, and as a former spy I value what spies can do when properly focused, but the reality is that 80% or more of what the military needs to know is both OSINT and not known to the military — it is known to academics, civil society (labor and religion), commerce, government, media, counterpart militaries, and non-profits.

For the military to say that it will only do national security OSINT is to fail to see that the failure of agriculture policy, or energy policy, or health policy, or immigration policy, or water policy, is a severe handicap for the military going forward in both strategic and financial terms.

Below is a concept from Jan Herring, former National Intelligence Officer for Science & Technology (NIO S&T). Such a capability must be national ALL INDIA in nature to optimal effect.

One of the more interesting books I have read and reviewed is below:

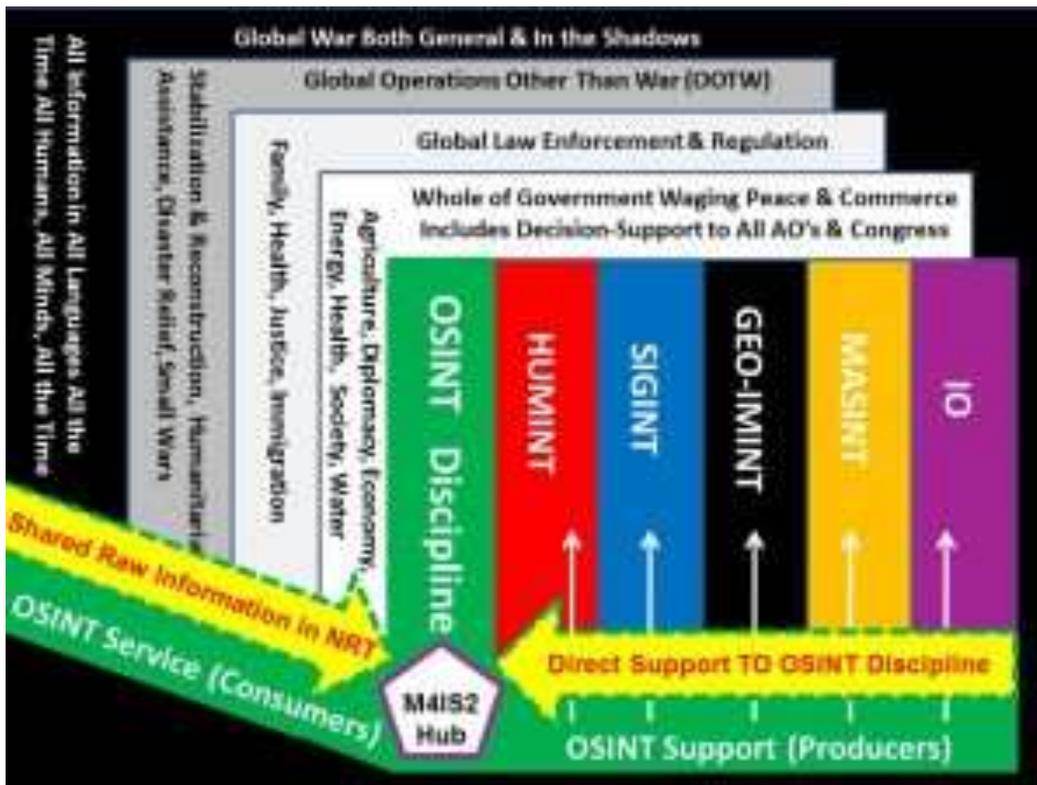

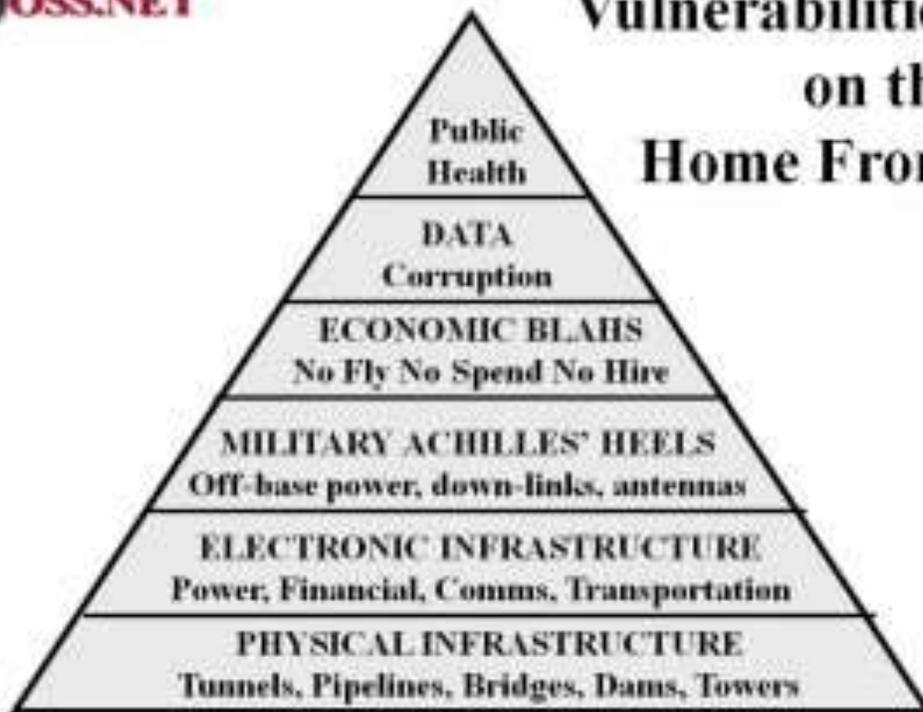

[Review: Consilience—the Unity of Knowledge](#)

This book asks and answers the question: why do the sciences need the humanities.

In the USA the two greatest failures of intelligence have been, on the military side, the failure to do intelligence -based national security strategy, acquisition, operations, and tactics; and on the other, the failure of the secret world to do policy OSINT compounded by the failure of the policy departments to do intelligence (decision-support).

I will repeat three three graphics from before. If the military wants to lead, protect, and assure the prosperity of India going forward, it has no alternative but to embrace my vision.

Vulnerabilities on the Home Front

Posted on [2020/12/06](#)

Answers on OSINT for India 24 – Does Open Source Information Sharing by Secret Agencies Have Security Downsides?

Sir, as we know info sharing is the strategy in OSINT. I observed that info is majorly multi-domain i.e. whatever we collect has security implications in major domains. For example, if a SIGINT operator pounces upon some piece of grey lit that has one portion concerning diplomacy then the same part needs to be conveyed to someone in policy intel.

Can you send some reading, grey lit, newspaper report or anything that might be considered to be close to having intel value and have multi-domain info contained in the piece of info.

Dear Colleague,

You are directly addressing the reason why we need a separate Open Source Agency (OSA) and why we cannot allow the secret intelligence agencies to manage their own

open source information support programs.

CIA has always insisted that the mere fact that they are interested in or collect a specific piece of open source information in any language makes that information immediately classified. It is not just the fact that they are interested (for example, an open source article about Chinese aviation plasma stealth technology) but the actual article is then “classified” in the US intelligence world and not shared with consumers.

When General Al Gray approved the creation of the Marine Corps Intelligence Activity (MCIA) and I was recruited to be the senior civilian responsible for creating it, his priority was intelligence support to military expeditionary force acquisition. The US Army Country Studies, for example, were classified SECRET. There was no useful decision support to military strategics, planners, and program managers with respect to what I conceptualized as “strategic generalizations” such as cross-country mobility, bridge loading, tunnel clearance, line of site distance, aviation temperatures, etcetera.

In brief — and BGen James Cox RN CA agreed with me on this — open source is too important to be “fenced” by the secret agencies because it ends up blocking the proper exploitation of open sources both across all secret agencies (the CIA, NSA, DIA, and FBI all hate each other and do not collaborate professionally) and in relation to the military commanders and civilian leaders who need decision support that is most useful when it can be shared with people who do not have security clearances.

This is a quote from the US Navy Wing Commander who led the lead flight against Baghdad in the first Gulf War:

“When you send me information that requires a safe and three security officers to move around the battlefield, that is not useful to me.”

General Al Gray himself focused on the importance of separating the secrecy of source and methods with the military actionable fact of a target: transmit the grid coordinates in the clear, never mind how we got them or how we know what is there.

An Open Source Agency would have within the Information Bureau a direct support element dedicated to meeting the needs of the secret intelligence agencies, and even staffed with cleared subject matter experts (e.g. COMINT, ELINT) who could guide the open source collection campaign. For a while I was converting top secret intelligence requirements into ostensible graduate student research papers within various science & technology centers associated with universities.

The key is that the OSA owns the original and provides a copy to the high side (the secret world) immediately as it is acquired, but the secret world loses all false pretenses and claimed rights with respect to classifying the original.

It also merits comment that it is vastly easier for an Open Source Agency to hide a requirement within millions of requirements covering all scientific & technical as well as social science and humanities target topics, than it is for a secret agency — and its known contractors — to do so.

It is also vastly easier for a global Open Source Agency network with a million subject matter experts covering every imaginable topic in every imaginable language to spot, assess, and develop potential clandestine sources to the point that special circuit riders can then pick up the development, recruitment, and handling of actual clandestine sources. Neither CIA nor DIA has ever been willing to acknowledge that fundamental fact. Instead they have their rogue private sector elements that are easily spotted by local liaison and make a mockery of the concept of clandestine operations.

Answers on OSINT for India 25 – Continued Mediocrity & Mis-Understanding

Sir please check page 9. The author cites you but also makes an unnecessary claim that OSINT goes

though the generic intel cycle. This may misinform the readers.

PDF (59 Pages): [2010 RIEAS Minas on OSINT](#)

Dear Colleague,

Very unusually for any academic paper, this young fellow has the integrity to cite me and — evidently without knowing that I wrote it — the *NATO OSINT Handbook*. at length. While his paper is deficient in many respects, not least of which he missed the top twelve references on the topic including my websites with 800 contributions for top OSINT practitioners, it is far better than most, including the crap produced by notional PhDs in the UK system. For an elementary overview — while failing to cite the single most important chapter I ever wrote, Steele, Robert. “[Open Source](#)

[Intelligence \(Strategic\)](#),” in Loch Johnson (ed.), *Strategic Intelligence: The Intelligence Cycle*, Westport, CT: Praeger, 2007, Chapter 6, pp. 96-122, it is generally acceptable. It is a lazy work drawing heavily on the two volumes I produced for NATO, the second being the *NATO OSINT Reader* but the author shows promise.

On the point you raise, my point as cited, that OSINT is the result of the combination of legally and ethically acquired materials with the proven process of intelligence, remains foundational in nature.

What the young man fails to understand — which is not surprising given the mediocrity and mis-understanding characteristic of all intelligence agencies and all private sector producers of “OSINT” is that it is not OSINT if it does not respond to a specific requirement from a specific decision-maker or decision-making body. It is not “OSINT” unless it answers a specific question of import needed to make a strategic, policy, acquisition, operational, or tactical decision.

The secret world does not produce intelligence qua decision-support. It produces a limited quantity of very mediocre classified information while engaging in very expensive covert operations not approved by legislatures, inclusive of child trafficking, drug trafficking, blackmail, torture, drone assassination, and regime change.

Answers on OSINT for India 26 – The Internet is NOT OSINT!

Sir, if you would have been given the task to tell about OSINT to an audience that has no idea about it or an audience that confuses it with internet, how would you introduce OSINT to them?

I am facing this problem.

After defining OSINT, I have to draw some background on it. The material available correlates OSINT with the US IC and the Cold War era. None of these will attract the Indian audience. Is there anything generic available on OSINT? Please help.

Dear Colleague,

I am sorry to say that because of the lack of integrity within the leadership of the US Central Intelligence (CIA), and the lack of integrity among customers for secret intelligence in

the Western world who are not held accountable for making decisions on the basis of evidence but instead sell decisions to the highest bidder, there is no intelligence — nor integrity or imagination — to be found within the secret intelligence world.

CIA made three really bad decisions in 1992 when I first went public with the Open Source Intelligence (OSINT) revolution after trying for four years, as the senior civilian responsible for creating the Marine Corps Intelligence Activity (MCIA), to get both the Department of Defense and the secret intelligence community to pay attention.

In 1989 the Commandant of the Marine Corps, Al Gray, agreed with me and at the suggestion of Mr. John Guenther, the ranking civilian in Marine Corps intelligence, put his name to the below reference that I ghost-wrote:

Gray, Al (Ghost-Written by Robert Steele), "[Global Intelligence Challenges in the 1990's](#)," *American Intelligence Journal*, Winter 1989-1990, pp. 37-41.

Immediately thereafter I published the below under my own name:

Steele, Robert. "[Intelligence in the 1990's: Recasting National Security in a Changing World](#)," *American Intelligence Journal*, Summer/Fall 1990, pp. 29-36.

The three really bad decisions that CIA made, one well-intentioned, the others simply corrupt, were:

01 Admiral Bill Studeman, then Deputy Director of Central Intelligence, after agreeing to speak for me in 1992 — his speech "Teaching the Giant to Dance: Contradictions and Opportunities in Open Source Within the Intelligence Community" can be found on pages 57-64 of the [NATO OSINT Reader](#) that I produced with help from NATO ATC staff, gave responsibility for OSINT innovation to Dr. Joe Markowitz,

a senior CIA analyst, rather than empowering me. Markowitz did the best he could but simply did not have my passion and commitment. Perhaps it was for the best — no one was ready for OSINT.

02 Markowitz was smashed by the CIA's Directorate of Operations, the clandestine service, which informed him that they owned Human Intelligence (HUMINT) and he was under no circumstances to deal with human Subject Matter Experts, only with commercial and online sources. The Open Source Centre — many overweight mostly women who came up the ranks of the Foreign Broadcasting Information Service (FBIS) skilled at monitoring foreign language media but totally unskilled as serious research, defaulted to the Internet.

03 Markowitz was smashed a second time by Joan Dempsey, then Deputy Director of Central Intelligence for Community Management, who refused his very correct suggestion that we require all elements to contribute to a Congressional Budget Justification Book (CBBJ), treating OSINT as a separate discipline and receiving the same integrated attention from the DCI as was applied to the Consolidated Cryptologic Program (CCP). Sadly, Charlie Allen, a very decent man then serving as DDCI for Collection, who should have known better, allowed Dempsey to get away with this truly unprofessional mandate. I was not consulted.

The Internet is not OSINT in seven ways:

01 The Internet does not produce decision-support. Only a human analyst working with all sources including analog and human sources, and guided by a decision-makers requirement, can produce tailored decision-support — an answer to a specific question by a specific person.

02 The Internet is a tiny fraction — 1% at best — of what is known. The Internet is also full of crap. Anyone mistaking the Internet for OSINT is simply ignorant and should not be taken seriously.

- X - 1% of WRITTEN Scientific Papers are PUBLISHED
- X - Perhaps 1% of PUBLISHED Papers are ACCESSED generally only in host language
- X - Perhaps 1% of 1% of non-English language unpublished papers are accessed
- X - Perhaps 1% of 1% of gray literature (off-line) knowledge in English is accessed
- X - No global index of subject matter experts on all topics in all languages at all levels
- X - No means of networking all local residents as part of a national "brain" across all topics

03 The Internet (1% of what is known) is not indexed.

Conference Proceedings (e.g. Bielefeld Library, CDPI)	Automated Abstracting (e.g. NetChal, ISI LINK)	Human Abstracting (e.g. NROD Members)
Commercial Online Sources (e.g. IN, DIALOG, ISI, UMI/ET)	Automated Translation (e.g. DITTO (R), SAA ATN (R))	Telephone Surveys (e.g. Wise Words Associates)
Risk Assessment Reports (e.g. Forecast, Political Risk)	Data Mining & Visualization (e.g. IL, NERAC, Visible Geomatics)	Private Investigations (e.g. Ingram, Promotions, Parvex)
Maps & Charts (e.g. East View Publications)	Desktop Publishing & Communications Tools	Market Research (e.g. ISI, FUL, ERI Types)
Commercial Imagery (e.g. SPOT, Radarsat, Automatik)	Electronic Security Tools (e.g. ISI, PCR, IBM Cryptosystem)	Strategic Forecasting (e.g. Oxford Analytica)

05 Most of what is known is only known to humans. Furthermore, most of what is known is only known to humans who do not speak English, have not published, and do not have security clearances.

Here are the real heroes of the Open Source Revolution:

[Golden Candle & Lifetime Achievement Awards](#)

[Historic International Contributions \(Directory\)](#)

06 Subject Matter Experts (SME) do not publish most of their work online. There are two kinds of SME: those that define themselves with publications, and those that do not — for example, everyone from the non-academic tribes.

Those who are active in the open air — both professionally or as indigenous personnel (e.g. farmers, shop-keepers, non-profit workers, and more — do not publish at all, generally speaking. Their experience is totally existential.

07 The Internet is not how one can best identify and contract for humans.

There are three major ways to identify SME:

a) Citation Analytics. There is no substitute for using the *Social Science Citation Index* or the *Science Citation Index* or services such as Maps of Science (they also do Social Science and Humanities). Citation Analytics requires expert discernment — the US academic world is totally corrupt and there are citation “clubs” and incestuous circles (e.g. Harvard) — and multinational citation analytics is in its infancy.

b) Mention in Media including Academic and Non-Profit. Here also discernment is required — 80% of those pontificating and being mentioned in media frequently are pundits who know nothing. Perhaps more interesting is the fact that journalists, if interviewed or incentivized properly, will identify those whom they are NOT allowed to quote (me, for instance) and they also know the 90% about people that cannot be published, such as who is sleeping with whom who is taking bribes, and more.

c) Word of Mouth. The best word of mouth is a proven expert identifying up and coming talent, for example, unpublished graduate students or mid-career government officers whose NEW KNOWLEDGE has not been published but is recognized as emergent and valuable. The worst word of mouth is rooted in incestuous circles such as Harvard people recommending their own — this is a problem with Freemasons, Catholics, Mormons, Zionists, and others.

The Internet is particularly unsuitable for identifying SME because it is in my view at least 60% fraudulent including completely made up articles signed by non-existent people.

In summary:

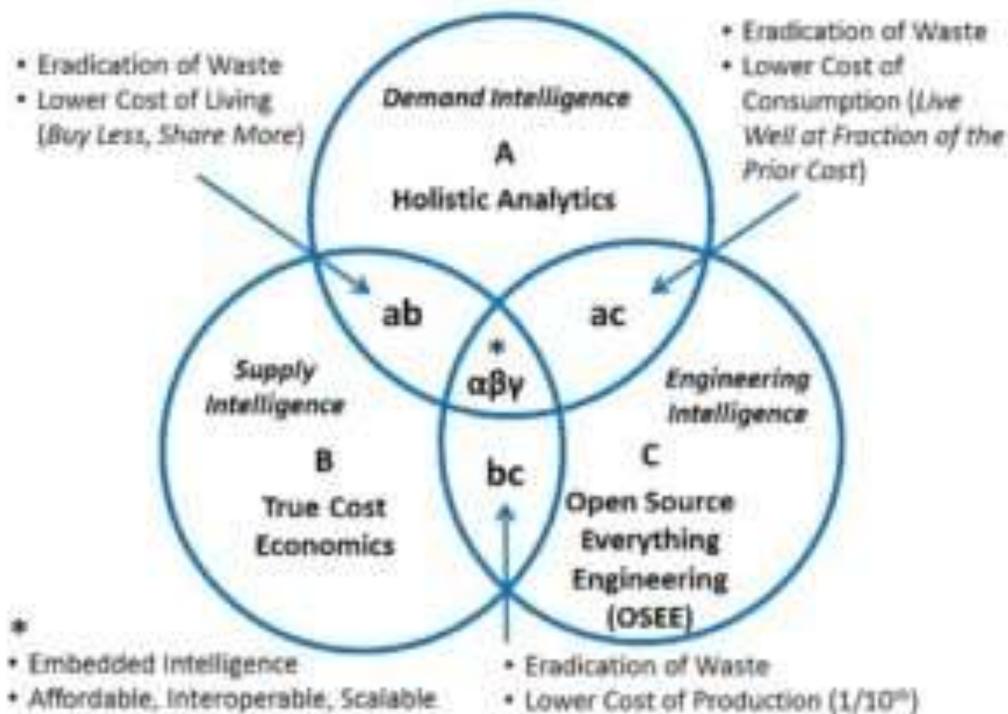

a) if it is online it is a generic broadcast and not decision-support.

b) if it is online it is 60-80% likely to be incorrect or improperly developed.

c) online — including for fee or subscription online — is at best 4% of what is known but closer to 1% of what is known by all minds in all languages.

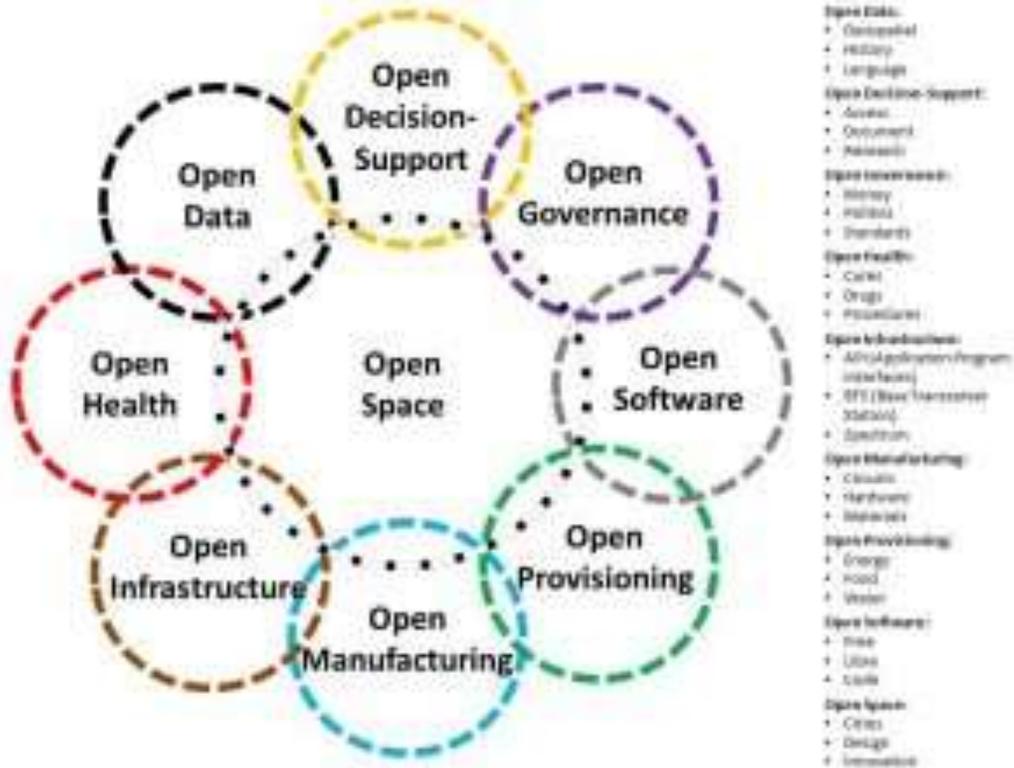

A SPECIAL NOTE FOR INDIA AND ITS FARMERS

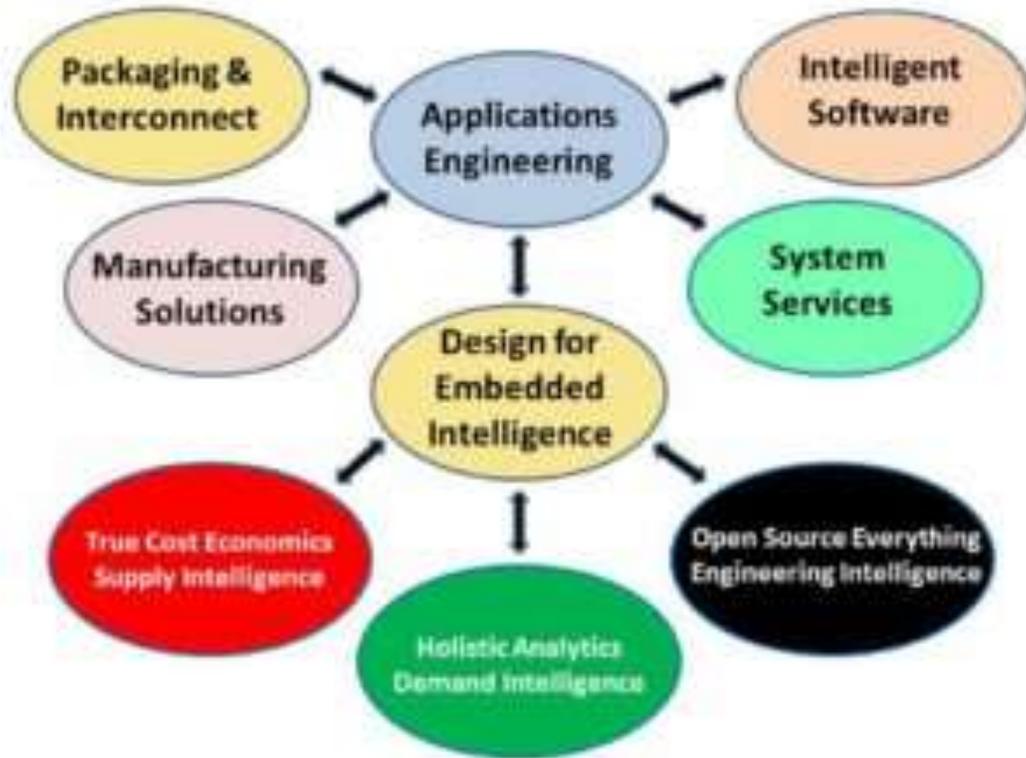

Beyond OSINT lies Open Source Everything Engineering (OSEE). I am going to provide four graphics here, because just as OSINT puts a stake into the heart of the dishonest and dangerous and largely useless (to the 99%), so also does OSEE put a stake in the heart of the Western banks and the corrupt Western economic and financial model.

DESIGN	CONSTRUCTION	MAINTENANCE	RECYCLING	COST
PTM - sketched parts, typically expensive, relying on a dedicated supply chain. Parts can't be manufactured independently because there are no blueprints to build them.	PTM - non-modular, hidden, hard to reach parts, bolts and washers, non-changeable parts used only at part level, not entire legs like modules	PTM - requires stop to repair shop because of difficulty of the job. In some cases, it is illegal to work on your machine without replacing the computer unit or doing work on anything with the warranty.	PTM - After its lifetime, tractor goes to a local junkyard and is stripped to reuse for recycling the recycling into dignified. At this point the PTM is sent to the junkyard, it is more expensive to fix repairs than to buy a new tractor	100% in many industries, whatever the market will bear, e.g. 100% or more of labor cost. No social or ecological cost calculation.
OPE - modular, commonly sourced parts, do not rely on particular suppliers as parts are available or easy to manufacture because they are open source.	OPE - transparent, no bolts, modular interchangeable parts as to entire engine units.	OPE - self-maintenance is almost obsolete. Option to go to service stations is there, based on open source maintenance manuals.	OPE - Open source enables to modular and allows quick replacement of parts. Therefore a given machine never needs to go to the junkyard, as replacing parts always makes economic sense.	OPE - 20% of industrial cost, if true costs calculated and waste avoided, no profits, 1% 2% over 5%.

Direct experience with all machines in the [Village Construction Net \(EDVCS\)](http://www.villageconstruction.net/EDVCS/), has provided a spreadsheet of comparative prices for OPE/OPE costs in comparison to industry standard retail costs. Generally speaking our costs are 10% to 20% of the market, offering Actual experienced and comparative costs are in a spreadsheet at <http://open-source-ecology.org/opens/>

80% if not more of OSEE is NOT ONLINE. This is reality. This is also why the Chinese company TenCent is going to kick India ass — they “get” that the future is a carefully managed blend of online SUBORDINATE TO offline.

Answers on OSINT for India 27 – Broken Links, Help to Researchers

Sir,

ACCESS: Theory and Practice of Intelligence in the Age of Information

http://www.oss.net/dynamaster/file_archive/040320/e970858337f478bcdb71b89953f60d67/OSS1993-01-34.pdf

link not working. Please arrange this paper.

Dear Colleague,

Your alerts are extremely helpful to me. I was able to replace the broken link. Here is both the post you found broken and the post that was also broken but is now replaced, with the more sophisticated second and formally published version of the paper.

[1993 ACCESS: The Theory and Practice of Intelligence in the Age of Information](#)

[1994 ACCESS: The Theory and Practice of Competitor Intelligence \(Journal of the Association for Global Strategic Information, July 1994\)](#)

If you do not see the PDF links below the images, refresh your screen.

Some mistakes were made when we closed down oss.net as a working site, but I have it all on a CD and have asked my webmaster for a list of broken links. Now that I am finally being heard, the time is right to fix this. It is a sadness to me that so many academics and intelligence practitioners have allowed themselves to be dissuaded from citing my work. This lack of integrity on their part is precisely why the secret intelligence world is largely worthless in relation to both OSINT and all-source decision-support.

Other generally overlooked gems include:

Answers on OSINT for India 28 – What OSINT is NOT!

Sir:

In my paper, I am including 'What OSINT is not'. Imagine that you are telling a stubbornly dedicated SIGINT operator about OSINT. The operator believes OSINT to be some simple net surfing used for gaining cursory information on anything. Or he relates OSINT to needle-in-haystack kind of discipline where discoveries are made by chance. How would you proceed to teach OSINT to such a person?

Dear Colleague,

The persistent ignorance about OSINT stems in part from very bad management decisions in the USA between 1988-1994, US/UK secret intelligence bribery of foreign intelligence entities (including India) since then; and the natural desire of each stovepipe (HUMINT, IMINT, SIGINT, MASINT) to both

keep its affairs secret from the other INTs, and to build their internal open source budget regardless of what others might be doing or have already gained.

A fundamental flaw in all secret intelligence organization is their confusion of secrecy with intelligence. Most of what they do is nothing more than secret information collection, secret information processing, and secret information analysis. They are not producing DECISION-SUPPORT that by definition demands a DECIDER being served, and a DECISION being made.

Intelligence is both decision-support, and the process that leads to decision-support, notably the integration of requirements definition (what does the DECIDER need to know), collection management, processing, and analysis leading up to the pinnacle of a professional intelligence officer's existence, DELIVERY to a DECIDER.

All of the generic publications, everything that is circulated to an audience of more than 2 or 3, is information, not intelligence.

The secret world has also been corrupted into believing that Covert Action is intelligence. It is not. I am disgusted by rendition & torture, drone assassination, regime change, agents of influence bribed and blackmailed to screw over their own publics for what turns out to be a FALSE GOD — nothing the USA demands is generally worth doing — and a massive global program of lies across academia, banking & commerce, governments, media, and non-profits.

- OSINT is not the Internet.
- OSINT is not academic research.
- OSINT is not think tank products.
- OSINT is not commercial studies or market reviews.
- OSINT is not military orders of battle or commander biographies.

While OSINT, like HUMINT, IMINT, SIGINT, and MASINT is used as an umbrella term, the below original graphic, with OSINT-V added by Dr. Joseph Markowitz (RIP), remains relevant.

Definitions

-  OSD - Open Source Data
-  OSIF - Open Source Information
-  OSINT - Open Source Intelligence
-  V-OSINT Validated Open Source Intelligence

The [NATO OSINT Handbook](#), which I wrote based on prior sponsorship of the Open Source Solutions conference from 1992 onwards, and my development of the multi-author of the [Open Source Intelligence Professional Handbook](#) (Joint Military Intelligence Training Center, Defense Intelligence Agency, October 1996) was modified by NATO ACT staff by 15%, but remains the standard in the field (and also long overdue for updating). Here are the definitions that appear on pages 2-3 of that publication:

Open Source Data (OSD). Data is the raw print, broadcast, oral debriefing or other form of information from a primary source. It can be a photograph, a tape recording, a commercial satellite image, or a personal letter from an individual.

Open Source Information (OSIF). OSIF is comprised of data that can be put together, generally by an editorial process that provides some filtering and validation as well as presentation management. OSIF is *generic* information that is usually *widely disseminated*. Newspapers, books, broadcast, and general daily reports are part of the OSIF world.

Open Source Intelligence (OSINT). OSINT is information that has been deliberately discovered, discriminated, distilled, and disseminated to a *select* audience, generally the commanders and their immediate staff, in order to address a *specific* question. OSINT, in other words, applies the proven process of intelligence to the broad diversity of open sources of information, and *creates intelligence*.

Validated Open Source Intelligence (OSINT-V). OSINT-V is information to which a very high degree of certainty can be attributed. It can be produced by an all-source intelligence professional, with access to

classified intelligence sources, whether working for a nation or for a coalition staff. It can also come from an assured open source to which no question can be raised concerning its validity (images of an aircraft arriving at an airport that are broadcast over the media).

RDS: The above on OSINT-V was modified by NATO ACT staff and is incorrect. OSINT-V must meet the same conditions as OSINT — to a SELECT audience answering a SPECIFIC question — the difference being that on the basis of classified information the all-source analyst can say “classified confirms this” or “there is nothing in classified to dispute this.”

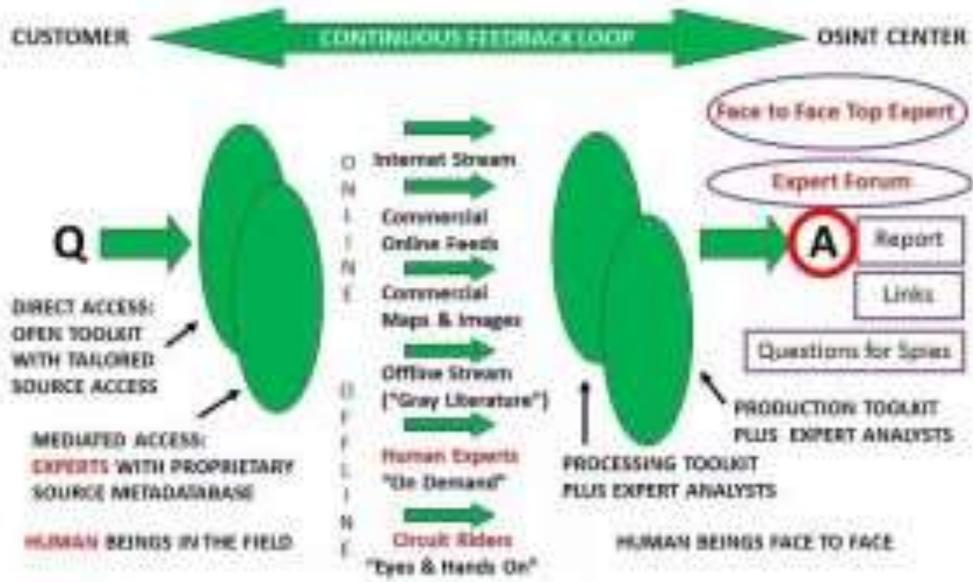

While CIA and all others have chosen to disrespect and ignore my pioneering work these past 30 years, the plain fact is that nothing CIA or anyone else is producing qualifies as OSINT under the established NATO definition that I drafted and General William Kernan, USA, approved.

Here is the foundation graphic:

Note the multiple sources among which Internet is the most superficial.

Now here is the process that applies to any INT, but note the diversity of OSINT sources and the red circle denoting the actual delivery of OSINT. It is not INT unless it produces an ANSWER for a SPECIFIC DECIDER.

INTEGRATED ONE-STOP SHOPPING PROCESS
 Call Center – Multi-Level Security – Umbrella for Unified Billing

Posted on [2020/12/24](#)

Answers on OSINT for India 29 – Case Studies, Persuading a Station Head to Use OSINT

Sir,

Do you have any case study on some OSINT op? How does one persuade a Station Head to use OSINT in support of his clandestine and technical operations? I am finding that there is more information about secret successes than there is about OSINT successes at the same time that OSINT was eclipsed by the “false God” of the Internet pretending to be OSINT.

Dear Colleague,

Mindful of the fact that all INTs are information, not intelligence, except when a specific answer is created for a specific decider (hence, decision-support), there are some very well-known but largely censored OSINT success stories.

Everything produced by contractors and intelligence agencies in the OSINT arena is generic information, not intelligence.

The most famous example of a direct competition between OSINT and the secret world is the Burundi Exercise in which I personally defeated the entire US intelligence community on the topic of Burundi with six telephone calls. I tell that story

[Answers on OSINT for India 13 – The Burundi Exercise](#)

The other case studies known to me are from the Special Operations Command (Ben Harrison), Dutch military intelligence (Arno Reuser), Scotland Yard (Steve Edwards), and RCMP (Lori Schnittker). Most cannot be discussed but here are a few generic success studies:

- 100X increase in confiscation of illicit wealth by Scotland Yard
- Arab terrorist submarine identified in the shipyard ready for delivery
- Hours saved in counterintelligence vetting of sources using open sources
- Russian military maps, overnight, for a SOF denied area crossing
- Russian tank specifications in detail via a commercial source
- S&T overviews for micro-UAVs, smart dust, other topics
- Terrorist, insurgent, opposition websites in 29 languages (CIA could not do)

My most famous sound-bit in the 1990’s was “do not send a spy where a schoolboy can go.”

Sadly, I failed to persuade CIA — starting with the Latin America Division in the Directorate of Operations — that it should have an OSINT Cell in every clandestine division and an OSINT cell in every Station overseas. They simply refuse to be professional about their mission, which is to answer questions by any means necessary.

The clandestine human intelligence cycle consists of spotting, assessing, recruiting, handling, and when necessary terminating gracefully to avoid blowback.

- SPOTTING: OSINT excels at mapping contacts and research areas to plan clandestine approaches to specific individuals;
- ASSESSING: OSINT excels at both background investigation of individuals being targeted for recruitment (or disruptive destruction), and at evaluating relative potential of individuals with different forms of access.
- HANDLING: OSINT has been found very helpful in both plain intelligence and in counterintelligence as a means of vetting people — checking their claimed history and recollection against publicly available sources.

OSINT provides a contextual foundation and a means of satisfying requirements that are important but do not need nor warrant risky expensive means of secret collection. The Special Operations Command under General Peter Schoomaker understood this — under Ben Harrison’s leadership J-26 answered 40% of all SOF requirement world-wide for under \$5 million a year with 22 people. Below is the graphic that won General Schoomaker’s interest:

I used to know Oleg Kalugin, a MajGen in the Russian KGB, then a member of the Russian Parliament, and for the last several decades resettled in the USA. In his book [The First Directorate – My 32 Years in Intelligence and Espionage Against the West](#), General Kalugin wrote to both the utility of OSINT to the KGB, and to their pretending OSINT was acquired by Top Secret means as part of meeting their mission objectives for the Center.

The proof is in the doing. I will end my answer to your question by again pointing to the conclusion of BGen Dr. James Cox, RN CA (Ret) who got NATO to listen to me (briefly) and sponsored the NATO OSINT series in his capacity as Deputy J-2 NATO.

[2013 BGen James Cox, CA \(Ret\) On the Record on Open Source Information versus Open Source Intelligence versus Secret Intelligence](#)

Any Station Head (in our terms Station Chief) that does not have an OSINT Cell in support of their clandestine and technical operations is in my view operating at 50% of capacity.

Answers on OSINT for India 30 – Gibson’s Flawed Understanding

Sir,

How correct is the given depiction by Mr Gibson (PhD Thesis)?

Figure 2.4: OSINT sources

Source: Author

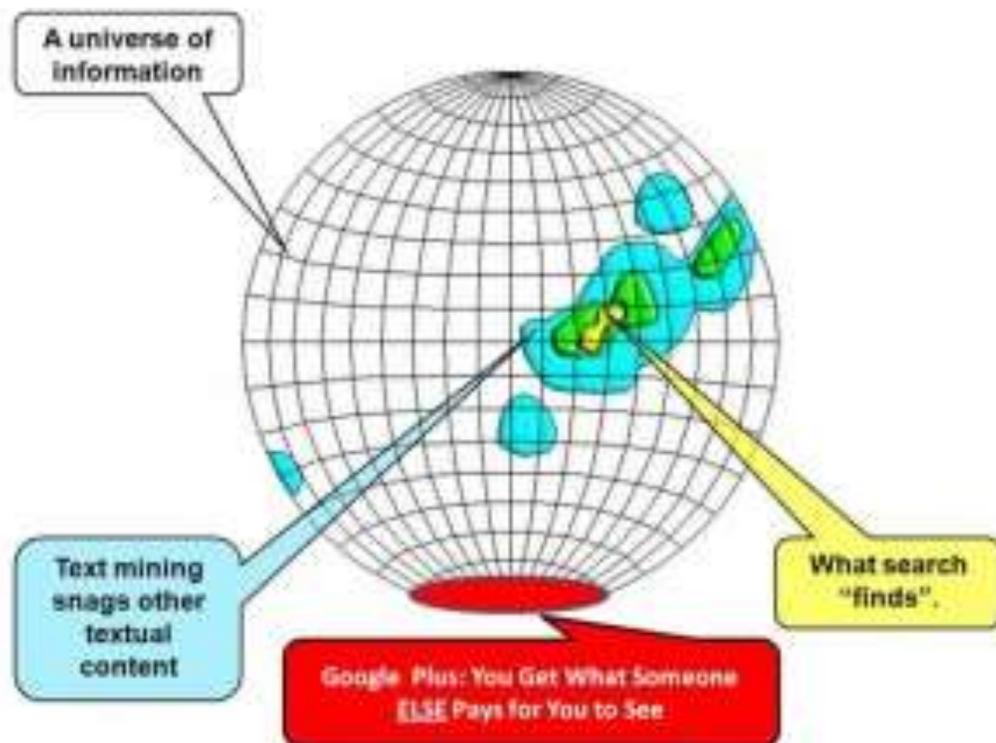

Dear Colleague,

As annoying as it is to be reminded of Gibson's clerical inventory lacking in any substantive value, this graphic is useful as a means of both re-confirming Gibson's ignorance, and an opportunity to emphasize the importance of understanding the true cost of varied open sources.

The better chart, from Dr. Joseph Markowitz, is here — Gibson appears to have lacked the foundation to make the basic point that OSINT at any cost is vastly cheaper and more satisfying, by and large, than any secret source.

Now consider this graphic from my virtual CTO Stephen E. Arnold, to which I added the Google red at the bottom:

Gibson's thesis, apart from its gratuitous insults and its drawing heavily on my life's work without due credit, is sophomoric at best — certainly not PhD level work in my view. It ignores the fundamentals of both data integrity and true cost economics; it also ignores the reality that most human networks for information sharing are relatively free of financial cost, not high cost at all.

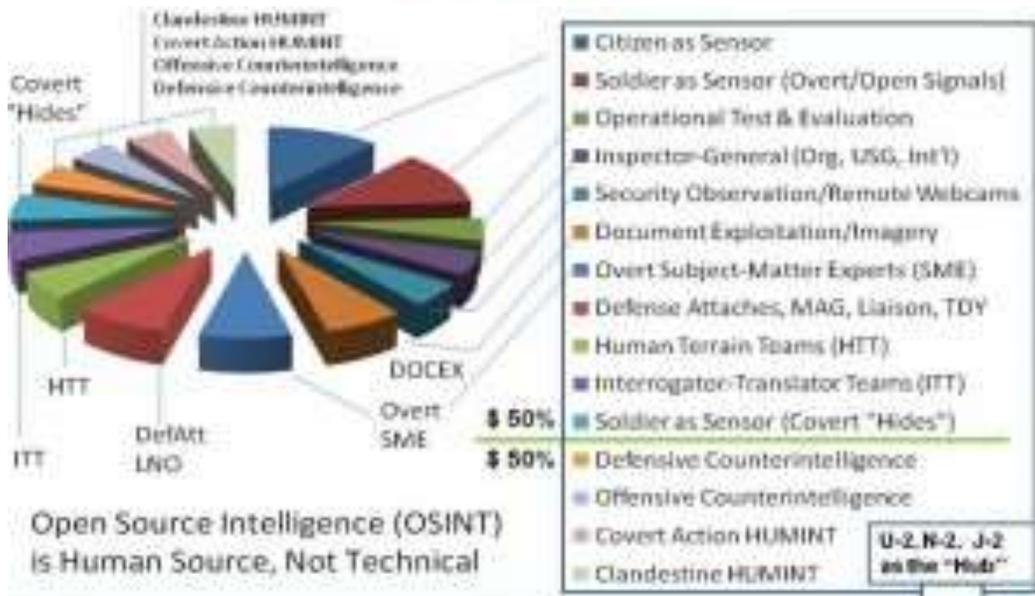

Gibson also ignores the foreign language / foreign culture nuances of open source information development, a common failing among camp followers in the US/UK system.

His term "relative associated cost" is stupid. It assumes that online products are "free" without contemplating the enormous cost of institutionalized falsehoods, advertising-driven search, data manipulation, deplatforming of dissident voices, and more. The opportunity cost of relying on "free" online is embedded idiocy. — the true cost of embedded idiocy is national suicide.

Gibson appears to have no understanding of the relative costs and hazards of academic research, most of which is incomplete and much of which is fabricated, or the total lack of value in most market research. I don't believe he ever did proper research on citation analytics, or harvesting top students of top cited published academics, which allows for control of data integrity at source, or insisting that all research be fully multilingual in all aspects.

Finally, apart from not getting that most experts and indigenous ground truth can be harvested at almost no cost given proper management (which is to say, established *quid pro quos*), he completely overlooks the cost savings that are achievable when commercial systems that have proven integrity (East View Cartographic for example, or Jane's especially its military budget offerings) are utilized instead of trying to do stuff in-house at great expense and often with losses of time and context that more skilled commercial elements can offer.

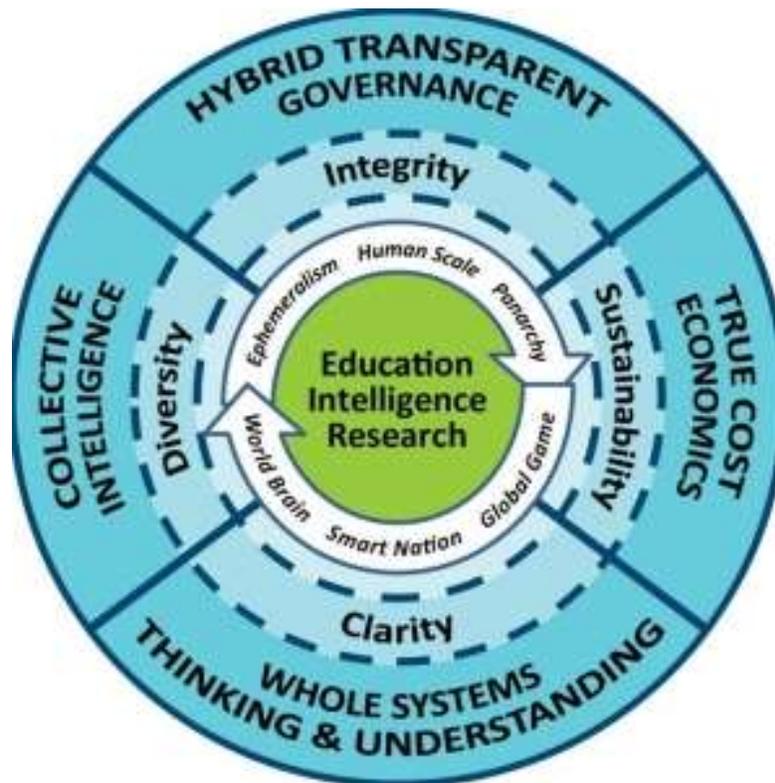

Here are four contextual graphics. Gibson never made the leap from being a pedestrian regurgitator of the works of others, to thinking big thoughts about how OSINT is the nail in the horseshoe of the secret intelligence horse that should be, but is not, the foundation for a Smart Nation. OSINT is HUMINT. OSINT is also ethics.

Education, Lessons Learned, Research, & Training are Foundation for Intelligence

Answers on OSINT for India 31 – OSINT Primer for Spies

Sir,

I constantly encounter two issues:

First, the spies think that Wikileaks and everything online is OSINT, they do not factor in analog sources or even human sources that are not controlled agents.

Second, and related, they think that the best open source information is to be found within the government agencies, and do not consider external sources or what you call the “eight” tribes.

Is there a 3-7 paragraphs and 3-7 graphic primer for spy leaders willing to entertain new ideas?

Dear Colleague,

I am sorry to say that because of the corruption of the US/UK intelligence communities, and their adamant refusal to be serious about OSINT — along with their deliberate repression of my work, we have NOT been able to develop an international OSINT network, and particularly one that engaged the lesser development countries that have been deliberately looted by imperial powers.

The secret intelligence community suffers from multiple forms of corruption including:

01 Neither the Executive nor the Legislative leaders demand decision-support

02 No one holds the secret intelligence world accountable for being stupid, useless, expensive, and a trouble-maker

03 It is easier to grow and hide a budget when it is secret

04 It is easier to blackmail Members of Congress when you can monitor them with secret sources and methods

05 Those who would benefit most from OSINT — the public and the front line managers in the various Cabinet agencies — have no say in how the budget is developed for the secret world and the rest of government.

The ignorance of the spies about OSINT is an obstacle.

I note your comment about analog. When I helped create the Scotland Yard OSINT unit under the leadership of Detective Constable Steve Edwards, an unanticipated benefit was that apart from radically reducing the cost of mapping networks of terrorists and arms merchants, it increased post-conviction confiscation by one hundred fold. The reason: Scotland Yard understood that global assets — real

estate, boats, airplanes, art collections — are documented in analog not digital in most places. Only a human on the ground, examining actual analog tax or other records, can get to the OSIF gold.

In another example, CIA refuses to do OSINT properly because they think that engaging with humans who do not have clearances — and foreign humans particularly — will “reveal” their interest. They don’t understand that any secret question can be turned into a not secret academic or commercial or media inquiry.

Example:

SPY: I need to understand Chinese stealth technology including plasma.

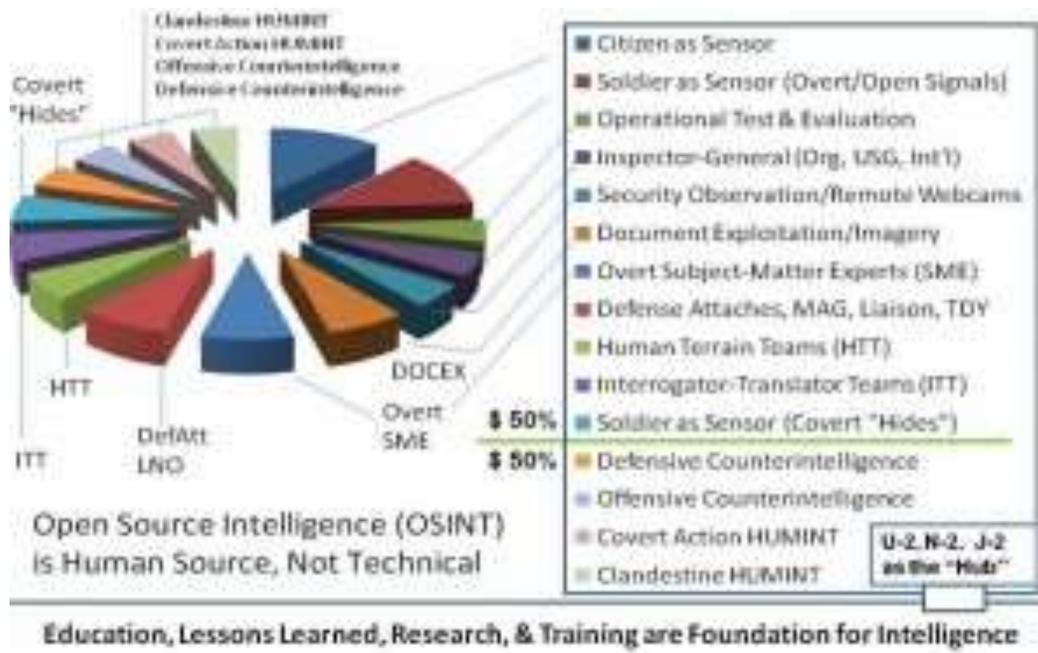

OSS to Swedish company: find me a graduate student fluent in Chinese and working plasma stealth domain outside of China.

Swedish company to said graduate student: I have a client interested in a ten page report with graphics and photos, on the current state of Chinese plasma stealth.

And back it comes. Everyone is happy.

OSIF must be acquired by legal, ethical means. What most people miss, apart from leveraging the eight tribes shown below, is the reality any single country endeavor is likely to fail while a multinational endeavor is likely to be much more successful.

90% of what we need to know is not secret, not in English, not online, and not known to anyone in government. OSINT is HUMINT and 90% of the humans are not eligible for secret clearances while most of them are foreigners.

A related problem is the stupidly in thinking that because they have expressed an interest or caused OSIF to be collected, what they get much be classified secret right away, and never shared.

A primary reason for having an Open Source Agency (OSA) is to both provide a central service to all consumers who need unclassified intelligence that does not warrant use of secret capabilities; and to provide the secret world with an intermediary that can get anything in the world that is unclassified, in any language or medium, but with the caveat that the secret world gets a copy and cannot control (classify) the original.

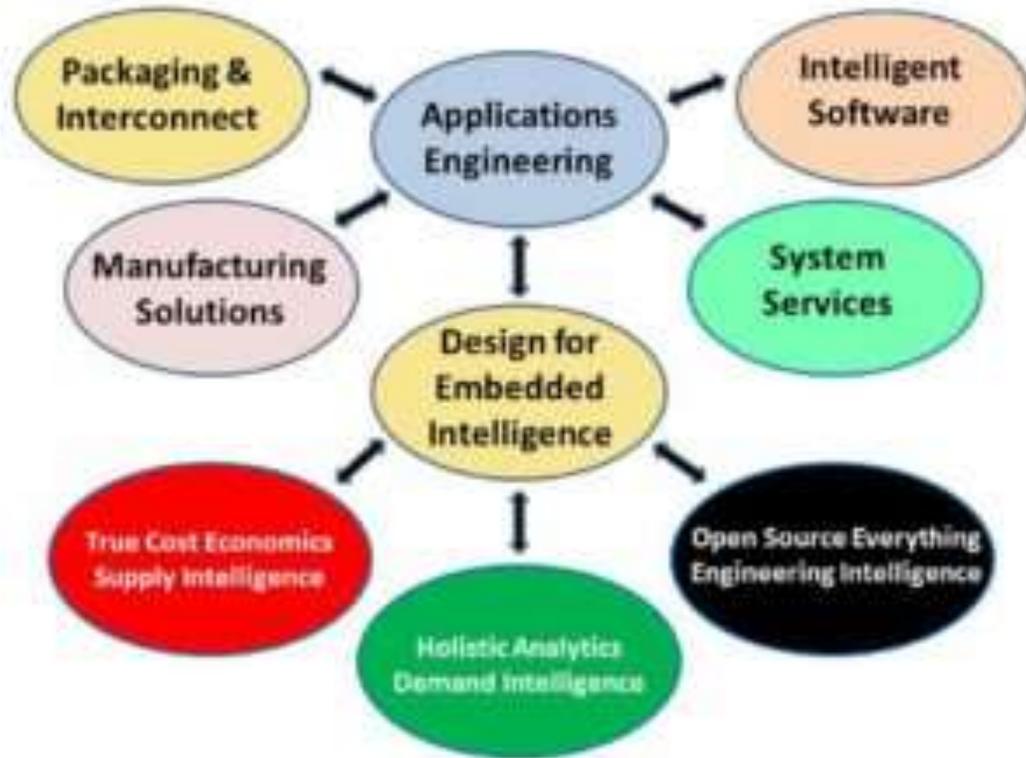

In your related question, I can understand how government spies — particularly in under-developed countries — might think that government statistics and government reports are the primary source of OSIF.

This is sadly like the drunk looking for the car keys under the light because that is where the light is. A major challenge is the corruption of ALL eight tribes of information as shown below.

I am sorry to say that while there are many example of top quality academic research, commercial research, journalism, and so on, by and large all of the institutions across all eight tribes have become totally corrupt and very ignorant. This is particular true of “think tanks” that are more about advocacy for particular ideological or Deep State interests than they are about the truth.

No one, anywhere, that I know of, is committed to the combination of holistic analytics, true cost economics, and Open Source Everything Engineering (OSEE) that got me recommended for the Nobel Peace Prize in 2017.

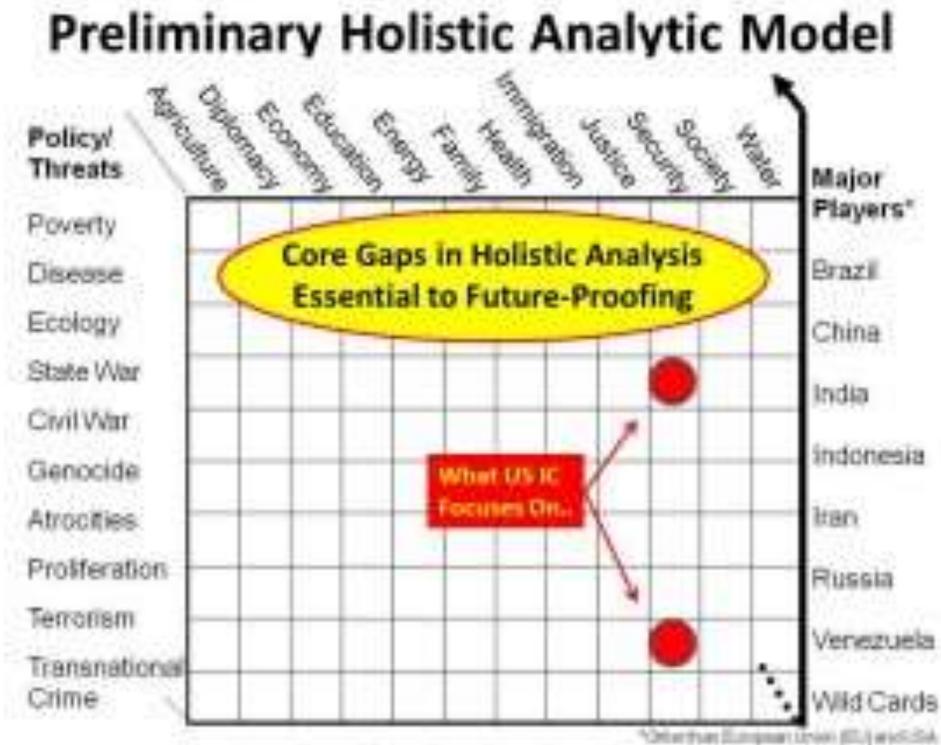

Indeed I can use an OSEE example, from Dr. Marcin Jakubowski, founder of Open Source Ecology and creator of the Global Village Construction Set that is all open source: OSEE costs 10-20% what the failed Western predatory economic model costs, with its 50% waste and 90% profit for the banks. Below is an example highly relevant to India: an open source tractor for ten percent the cost of a John Deere tractor — perhaps for villages that want to move up from using children and beasts of burden.

DESIGN	CONSTRUCTION	MAINTENANCE	RECYCLING	COST
F1M - Dedicated parts, typically expensive, relying on a dedicated supply chain. Parts can't be manufactured independently because there are no blueprints to build them.	F1M - Non-modular, hidden, hard to reach parts, bolts and washers. Interchangeable parts exist only at part level, not within legs like modules.	F1M - requires lots to repair them because of difficulty of the job. In some cases, it is illegal to work on your machine, such as replacing the computer, with an aging work on anything with the warranty.	F1M - After its lifetime, tractor goes to a local junkyard and is shipped to China for recycling into something into virgin steel. Or (to make the F1M lawsuit the junkyard), it is more expensive to fix them than to buy a new tractor.	80%. In many industries, whatever the market will bear, e.g. 200% or more of full cost. No social or ecological cost calculation.
O1E - modular, commonly sourced parts, do not rely on particular suppliers as parts are available or easy to manufacture because they are open source.	O1E - transparent, no hidden, modular interchangeable parts up to entire engine units.	O1E - self maintenance is always available. Option to go to service stations is there, but often open source maintenance manuals.	O1E - Open source version is modular and allows quick replacement of parts. Therefore a given machine never needs to go to the junkyard, as replacing parts always means economic sense.	10% - 20% of industrial era cost. If true costs calculated and costs avoided, no taxes, 15-25% over 0%.

Direct experience with 40 machines in the Global Village Construction Set (GVCS) has provided a spreadsheet of comparative prices for GVCS/OSEE costs in comparison to industry standard retail costs. Generally speaking our costs are 10% to 20% of the market offering. Actual assembled and comparative costs are in a spreadsheet at <http://open-source-ecology.org/gvcs/>.

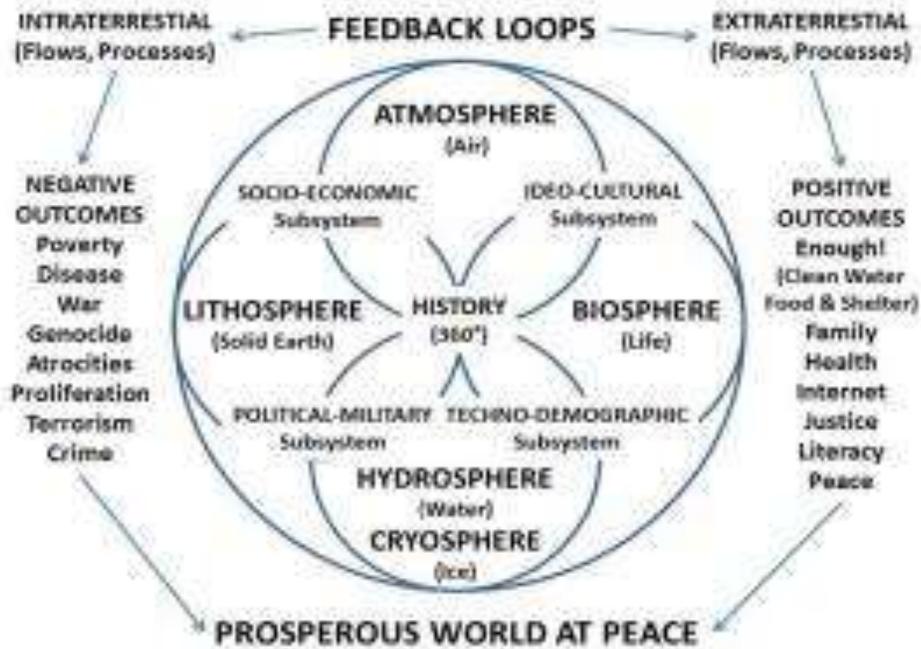

My final observation is this: until we have publics and leaders that demand that intelligence live up to its potential as a provider of DECISION-SUPPORT, we will continue to have spies that confuse secrecy with intelligence. A holistic analytic model must allow for Whole of Government deliberation about

strategy, acquisition, operations, and tactics that take into account all threats, all policies, all true costs, all peer competitors, and all geographic and socio-cultural environments. Below is a simplified model followed by my original model for studying the preconditions of revolution and then my Whole World model. CIA cannot do these and I strongly suspect that RAW cannot either.

	Political-Legal	Socio-Economic	Ideo-Cultural	Techno-Demographic	Natural-Geographic
Perception	History of ideas, traditions, institutions	Development of society, social order, institutions	Language, religion, ideology, institutions	Migration of people, economic, technology, innovation	History of major events in global, continental, national history
Identity	Role of elite, institutions, culture, politics, religion	Role of economy, technology, culture, social institutions, growth	Role of ideology, culture, religion, social institutions, technology	Adaptation, survival, and support, and technology, with new growth	History of language, culture, institutions, with national identity
Competence	Role of institutions, government, or trade in the city, technology	Development of trade, technology, institutions, or culture, politics	Development of culture, role of institutions, or technology	History of culture, technology, with existing, social, institutions	History to present, or past, with social, cultural, institutions
Investment	Government, or economic, government	Government, technology, role of social, order	Government, government, institutions	History to present, development, of technology, or growth	History to present, or growth, social, cultural, institutions
Risk	Role, technology, government, culture, politics	History to present, with culture, technology, culture, politics	History to present, with culture, technology, culture, politics	History to present, with culture, technology, culture, politics	History to present, with culture, technology, culture, politics
Extroversion	History, technology, government, culture, politics	History, technology, government, culture, politics	History, technology, government, culture, politics	History to present, with culture, technology, culture, politics	History to present, with culture, technology, culture, politics
Transcendence	History, technology, government, culture, politics	History, technology, government, culture, politics	History, technology, government, culture, politics	History to present, with culture, technology, culture, politics	History to present, with culture, technology, culture, politics
Synergy	History, technology, government, culture, politics	History, technology, government, culture, politics	History, technology, government, culture, politics	History to present, with culture, technology, culture, politics	History to present, with culture, technology, culture, politics
Complexity	History, technology, government, culture, politics	History, technology, government, culture, politics	History, technology, government, culture, politics	History to present, with culture, technology, culture, politics	History to present, with culture, technology, culture, politics

Whole Systems Analytics

The strategic generalizations that I devised by using a proper analytic model with carefully devised degrees of difficulty for each of 144 mission area factors can be seen at the below link with two graphics provided here for convenience. No one, anywhere, does this degree of honest holistic analytics.

[1990 Expeditionary Environment Analytic Model](#)

Below is military. See link above for geographic and cultural counter-parts.

OVERVIEW OF GROUND FACTORS SHAPING THE EXPEDITIONARY ENVIRONMENT

CAPABILITY	HIGH	MEDIUM	LOW
INFANTRY	Mechanized, division-sized combined arms capable with ALP	Mobile trained Rgmts or Bns with some combined arms	Bn-sized forces with limited mobility & spt
ARTILLERY	SP or towed, with rockets & missiles, NBC, range 30K+	SP or towed, with some missiles, bio-chem, <30K range	Towed artillery with <30K range and/or mortars
ARMOR	T-72M1 or T-80/64B equivalent with advanced armor (R/A)	M-60, T-62B/Mod 55 equivalent with 3rd gen. armor	M-48/T-54/IPV equivalents or less
C4I2	Integrated strategic & tactical C4I2 using full RF spectrum	Terrestrial RF and landlines, limited encryption & intel	Single-channel radio, limited encryption/intel
SUPPORT	Full-range engineers, complete military police/PSYOP-CA units,	Limited engineers, some military police and PSYOP-CA	Countermobility engineering, no dedicated MP/PSYOP
SERVICE SUPPORT	Able to move, supply, & maintain a division beyond its borders	Can move, supply, & maintain rgmts & bns within borders	Some resupply & limited maint. capability
LEADERSHIP, TRAINING, & READINESS	Corps+ leaders, troops experienced, well-trained, fully ready	Div level leaders, some troop training partially ready	Regt lev leaders, no or infrequent training, not rdy
MILITARY MANNING	Foreign advisors, full reserve, PM/elite units	Foreign contractors, partial reserves, some PM/elite units	Constabulary or pro forma reserve w/o SOF

Mission Area Degrees of Difficulty

Posted on [2021/01/23](https://www.facebook.com/2021/01/23)

Answers on OSINT for India 32 – SOCMINT is Idiocy

SOCMINT, or “Social Media Intelligence” is both an oxymoron and a scam. What is really going on here is budget building — people creating work to justify more senior positions and larger budgets.

SOCMINT is far removed from reality and particularly far removed from real people both within the USA and abroad.

We know that over half of Facebooks accounts are fake and that most people in the bottom four billion of humanity do not use Facebook — or Twitter or any of the other “social media” platforms.

We know that the Anti-Defamation League (ADL) and Southern Poverty Law Center (SPLC) have evolved into censors of truthful information in service to the lies favored by the Deep State.

We know that Google and YouTube are fabricating statistics and manipulating searches, polls, and data in every possible way to achieve contrived ends including theft from advertisers and the theft of elections.

In my view, as show in the graphic below, humans, not data manipulated by BigTech, are the primary source of relevant information on all threats, all policies,, all true costs.

SOCMINT is what morons do when they don't know how to do intelligence.

SOCMINT is what morons are allowed to do when their “leaders” are just as stupid and unethical as the morons they are ostensibly supervising.

Below are the “new rules for the new craft of intelligence” as I defined them in 2002. Anyone doing SOCINT is part of the problem, not part of the solution.

Answers on OSINT for India 33 — From C4 to M4IS2

I am delighted to see you focusing on the necessary migration from C4 to M4IS2. You have asked me how these concepts can be correlated.

C4 is rooted in technology while M4IS2 is rooted in humanity.

C4 stands for command & control, communications, and computing. Generally the term used is C4I, adding intelligence, and the 1990's C4I2, adding interoperability. All focuses on technology.

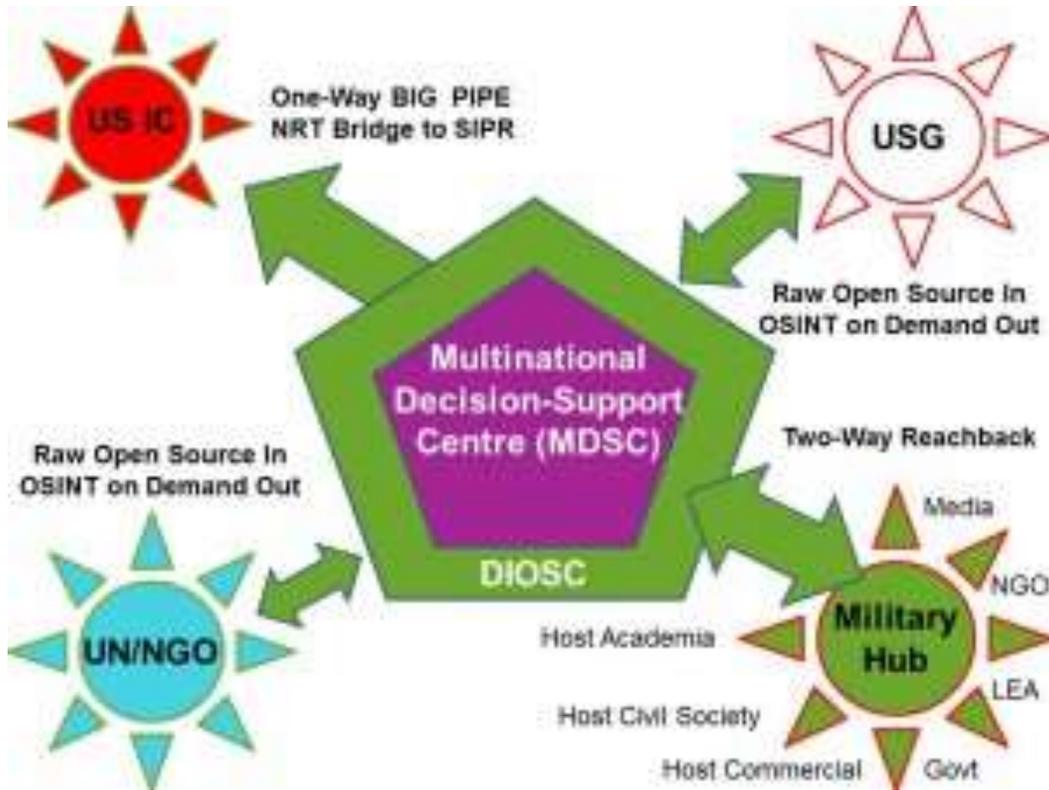

M4IS2 stands for Multinational, Multiagency, Multidisciplinary, Multidomain Information-Sharing & Sense-Making.

The secret world does not do multi-national or multi-lingual. It does bi-lateral and tends to stick to English language documentation.

The secret world does not do multi-agency, it does unilateral covert operations.

The secret world does not multi-disciplinary or multi-domain — it has no grasp of holistic analytics, true cost economics, citation analytics, in-depth human surveys, and more.

Below are some of my references on M4IS2. We still need secrets but we must get vastly more professional about open source everything and M4IS2. Below is a graphic showing how this might be implemented via national militaries.

Answers on OSINT for India 34 — M4I2 as Philosophy and Process Integrating Holistic Analytics, True Cost Economics, & Open Source Everything Engineering (OSEE)

You ask, Is M4i2 a philosophy or a process (like C2)?

I want to answer that question in three ways:

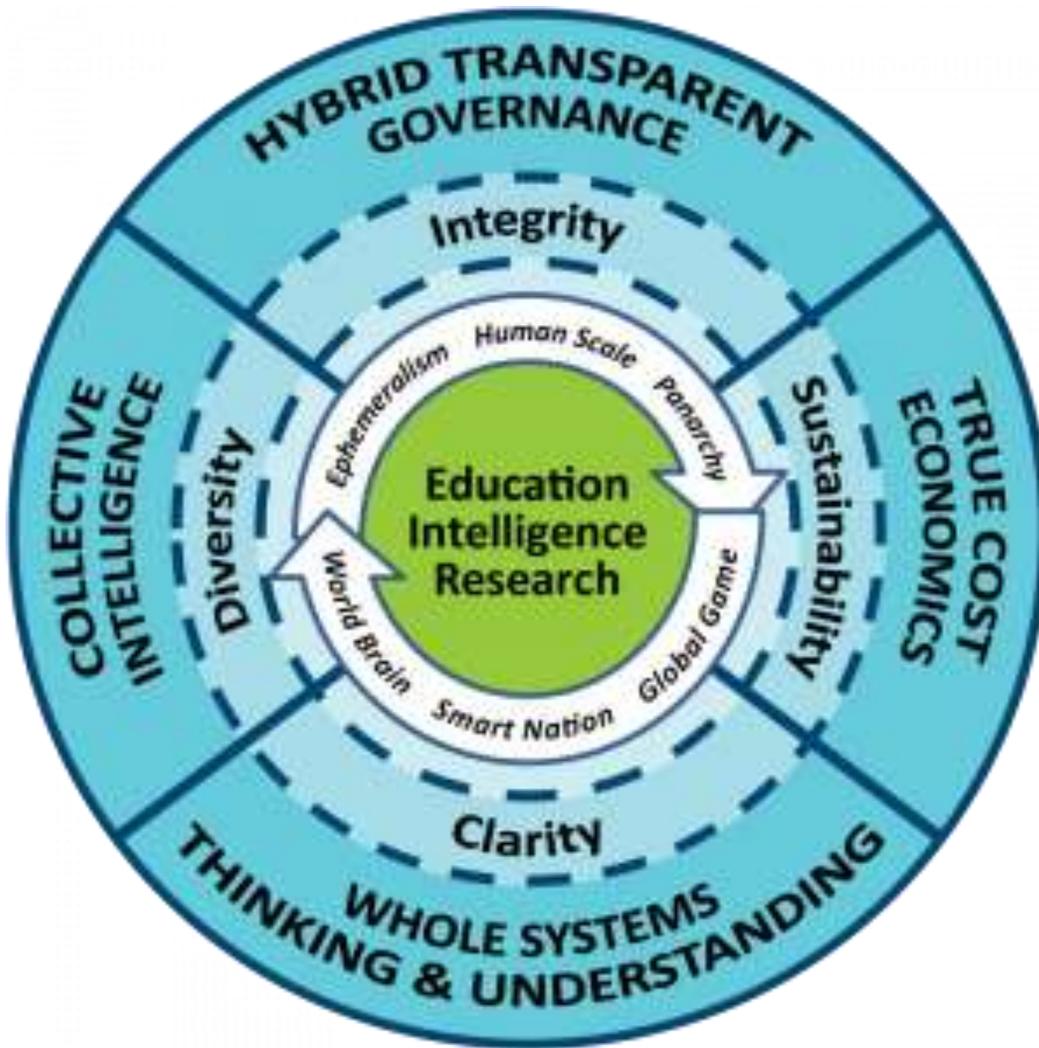

M4IS2 is a philosophy.

M4IS2 is a process that must integrate Holistic Analytics (HA), True Cost Economics (TCE), and Open Source Everything Engineering (OSEE)

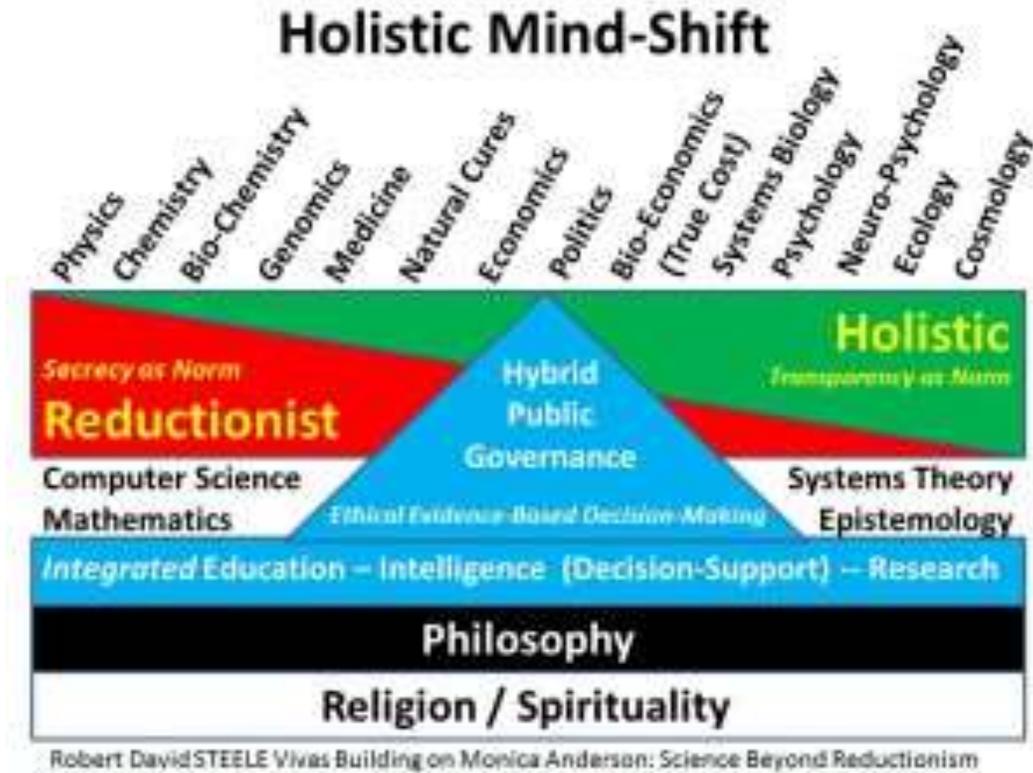

M4IS2 at the highest level is a spiritual alignment of humanity with all stellar civilizations, and a form of advanced education, intelligence (decision-support), and interdisciplinary research intended to elevate all of humanity, equally, and all species with protection for their diversity, to the next level of being.

Whole of Government (WoG) and Smart Nation are two other concepts that bear on taking any given sovereign people to their highest level of potential.

Below is the one graphic that captures my thinking as it has evolved over the past thirty years of divergence from the unprofessional retardation and often criminal misbehavior of the secret intelligence agencies.

Intelligence (Decision-Support) is not just a rational activity — most “rational” thinking is retarded by design, to include tolerance for being wrong, for not being authentic, inclusive, or truthful. Properly done Intelligence (Decision-Support) must integrate the heart — feelings — and consciousness including compassion and intuition. The best intelligence is not black and white, it is nuanced and contextual and actionable on the day.

I speak to your questions in a larger context in these two publications free online:

[Robert Steele: Healing the Self & Healing the World – The Open Source Way \(Trump Revolution 14\)](#)

[Robert Steele: Reflections on Philosophy of Intelligence \(Trump Revolution 18\)](#)

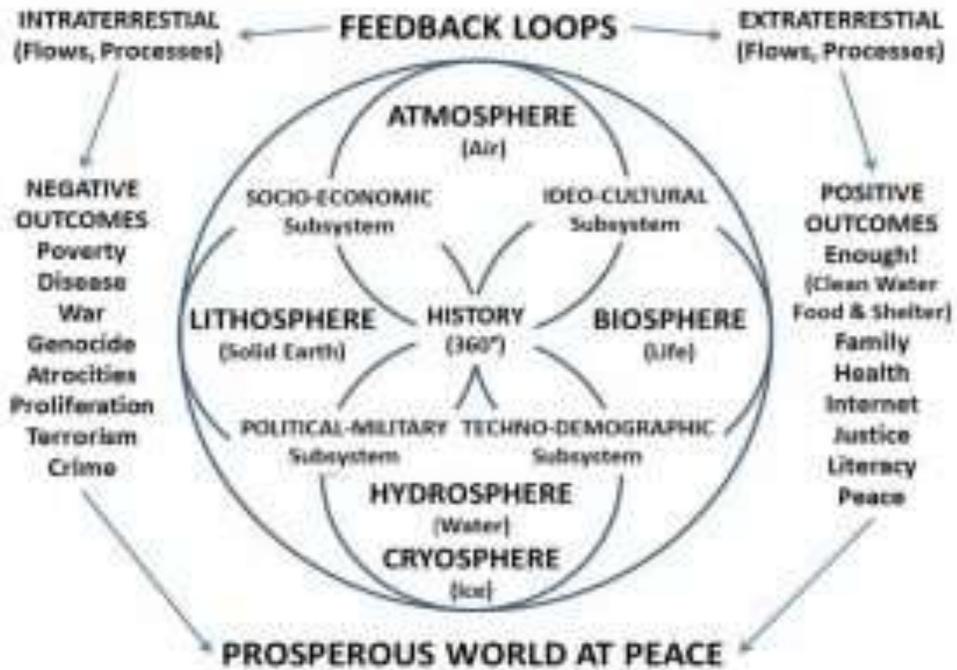

Among my most treasured books speaking the cosmic issue of the human mind in relation to the cosmos and Mother Earth are these:

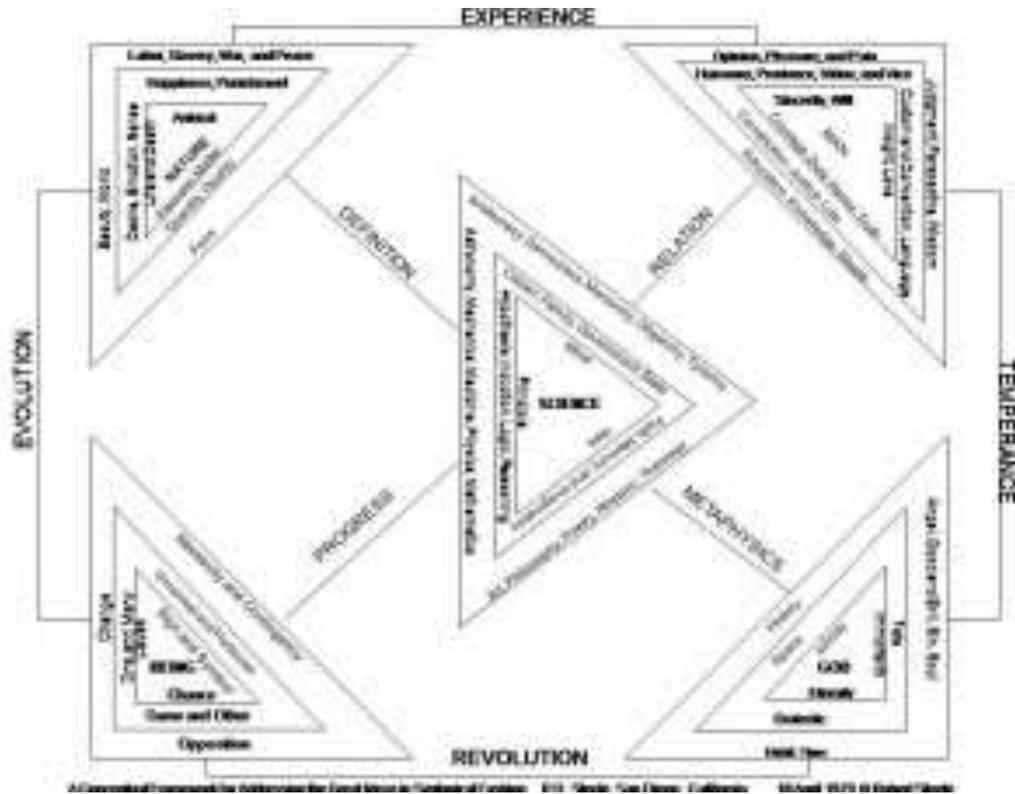

- [Review: Consilience–The Unity of Knowledge](#)
- [Review: High Noon–Twenty Global Problems, Twenty Years to Solve Them](#)
- [Review: Holistic Darwinism: Synergy, Cybernetics, and the Bioeconomics of Evolution](#)
- [Review: Homeland Earth](#)
- [Review: On Complexity](#)
- [Review: Philosophy and the Social Problem–The Annotated Edition](#)
- [Review: The Christian Gospel for Americans – A Systematic Theology by David Ray Griffin](#)
- [Review: The Health of Nations–Society and Law beyond the State](#)
- [Review: Truth – Philosophy in Transit](#)[Review: Nonzero–The Logic of Human Destiny](#)

I am also interested in Christian and inter-faith collectivism, community in Christ, and have been inspired by these two publications:

- [Yoda: Ascension Christianity — Next Big Thing?](#)
- [Veðrfölnir: On Ascension Christianity: Huey P. Long, Donald J. Trump, and the New Great Awakening](#)

A very smart person with a PhD in Philosophy asked me recently if I was batshit crazy, my partial answer to him put forward the below two graphics showing how I think about the world, and the stages of intellectual growth and levels of play as I personally have experienced them, in the higher stages not directly but through others.

Stages of

Intellectual Growth, Five Levels of Play

1. Truth assumed to be Default
2. Lies known to be Default
3. Consciousness is a Force for Good
4. Everything is Energy in Some Form
5. Stellar Civilizations Abound
6. Frequencies Manage and Manifest Energy
7. Time & Space Travel Achieved by Mind Control

Most of the US public, and most of the global public, is somewhere between levels 1 and 2.

5D Chess — what are the five levels being played?

LEVEL 1: Mundane daily bullshit the media focuses on – theatrics for dummies

- Example: all the made up crap about deaths from COVID-19

LEVEL 2: Economic re-set, cyber-war

- Example: NESARA/GESARA, quadrillions not just trillions, CN-RU-US in synch

LEVEL 3: Cultural warfare inclusive of mass propaganda, media lies, and mind-control

- Example: all institutions are programmed against freedom and truth

LEVEL 4: Scalar warfare – energetics, gravitobiology, remote electromagnetic effects

- Example: Russia starting fires on Chinese and US amphibious ships, remotely

LEVEL 5: Cosmic stellar civilizations and the epic battle of good (God) versus evil (Satan)

- From Europe to Newtown CT to “Wonderland” under NYC, this is a cosmic war

Answers on OSINT for India 35: Should OSINT Technical Be Separate from OSINT Analysis?

Sir,

Do you think it wise to distribute OSINT into two components- analytical vs technical. **Technical** here means all those tools and wares that help in analysis. It doent mean any alleged omnipotent search engine that searches every thing.

For example, while ACH (Analysis of Competing Hypotheses) is an analytical method while the software that was later on developed by Mr. Heuer helped analysts feed in loads of data and reduce time taken for analysis.

NO!

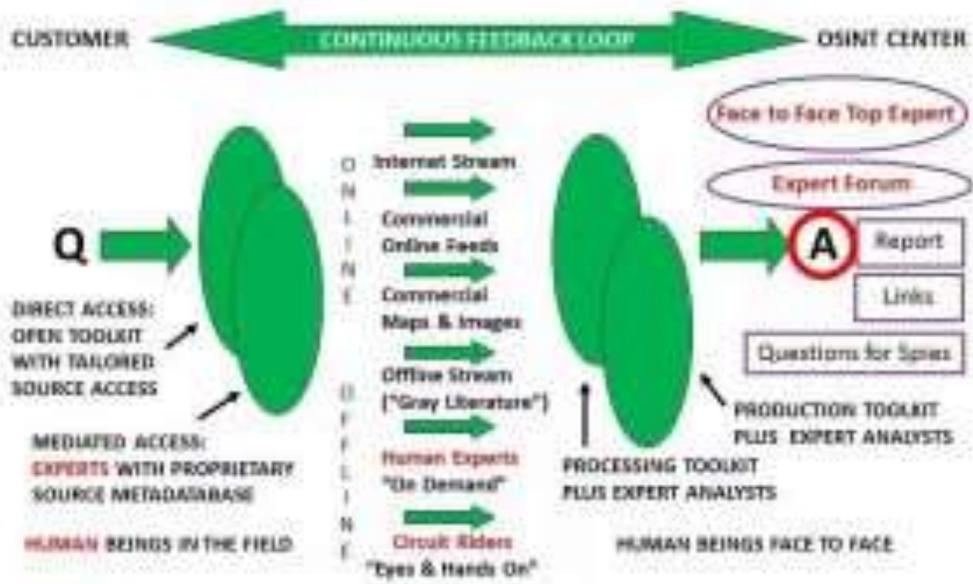

Around 1992 I was ghost-writing for General Al Gray, then Commandant of the Marine Corps, and the below sentence is one of the best I have ever produced, for his use in

explaining to Congress why the Marine Corps at the time was unique for having Communications and Intelligence under the same flag officer.

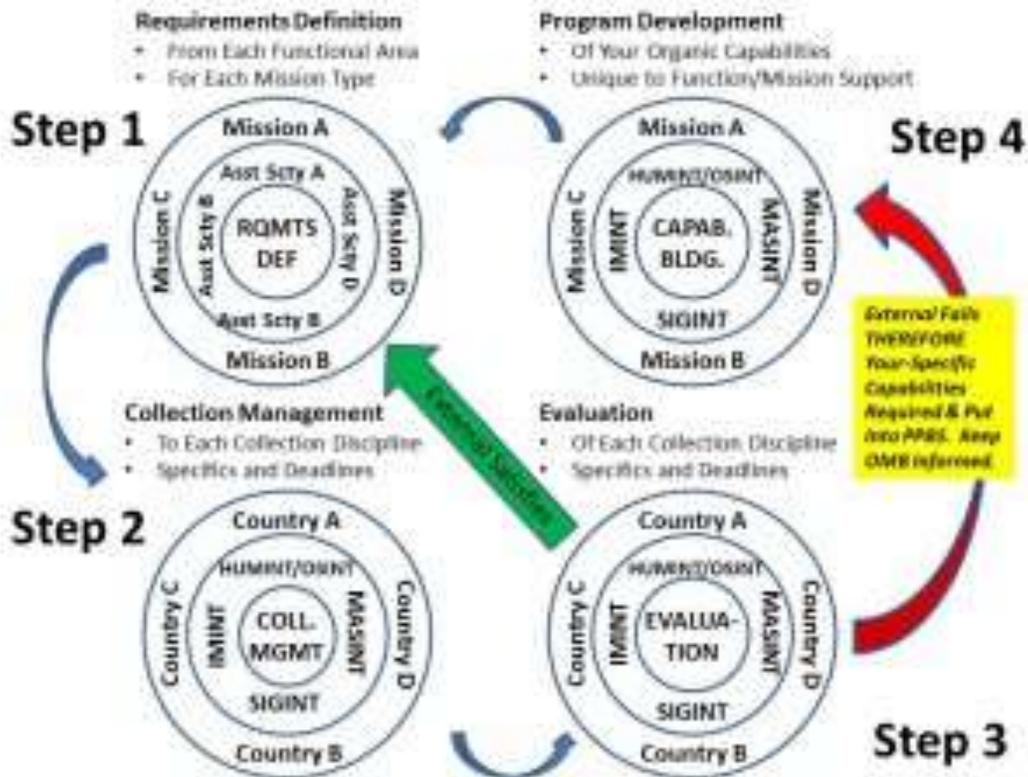

Communications without intelligence is noise; intelligence without communications is irrelevant.

I firmly believe that all of the collection agencies, including the human intelligence elements of CIA, DIA, FBI, military services, and assorted other rogues and rascals, are out of control precisely because they are divorced from BOTH the decision-maker(s) to be supported AND the analysts who are supposed to be making sense out of it all.

Discovery, Discrimination, Distillation, and Dissemination need to be integrated. Below are two graphics that apply:

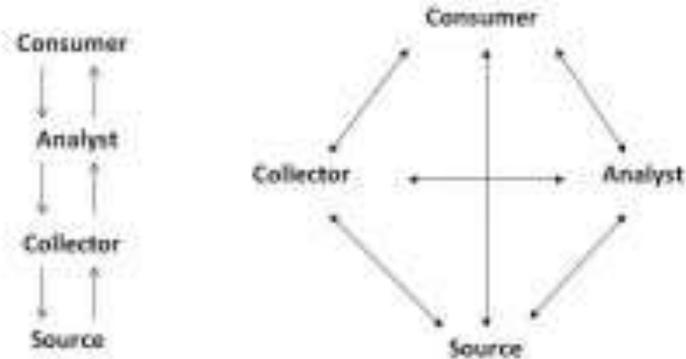

INTEGRATED ONE-STOP SHOPPING PROCESS
Call Center – Multi-Level Security – Umbrella for Unified Billing

Linear versus Diamond Paradigm

Rule 13: *Cross-fertilization matters more*

- Old approach: consumer to analyst to collector to source—the *linear* paradigm. More often than not, the source can fabricate something out of thin air or from open sources, and never be discovered.
- New approach is the *diamond* paradigm where collectors and analysts help consumers talk directly to sources—to HUMAN sources.

One of the finest experiences I had as a clandestine case officer was within the training environment at mid-career, first with Jack Davis, the dean of CIA instructors noteworthy for holding CIA leaders in scorn and disdain; and in the Mid-Career Course where I was honored with a seat by DDA Bill Donnelly as a reward for my (failed) pioneering while on detail to him to create the Artificial Intelligence Staff in the Office of Information Technology.

I will never forget the lesson I learned in the mid-career analysis exercise. The message traffic is less than 20% of what can be known. You MUST MUST MUST walk around and talk to all the other humans, both collectors and analysis, to get everything that is NOT in the message traffic.

I applied this lesson when I was the senior civilian responsible for creating the Marine Corps Intelligence Activity (MCIA). Apart from designing the flagship study, Overview of Planning and Programming Factors for Expeditionary Operations in the Third World, I also took a look at how we define the threat. The below graphic comes from talking to every analyst in every agency having anything to do with studying the T-72 Russian main battle tank at the time.

Level of Analysis	Threat Grade	Comment
Strategic Sustainability	LOW (2.0)	Not sustainable for more than two weeks.
Operational Availability	MEDIUM (3.0)	Many of them scattered around.
Tactical Reliability	LOW (2.0)	Cannibalized parts, stored in open, poorly trained crews.
Technical Lethality	HIGH (4.0)	Best tanks money could buy at the time from Russia. US IC Official Threat on Worst Case Basis
General Threat Factor	<MEDIUM (2.75)	Proper analysis differentiated threat at each level which means each level commander is individually informed.
Military Difference	1.25 (31%)	Being wrong by 31% is significant—nuances matter. On balance, at two of four levels, threat is a LOW threat.

Threat (or Factor Being Evaluated) Changes at Each Level of Analysis

The secret intelligence world and the military industrial complex default to worst case technical threat because that is a budget builder. In fact the threat changes depending on the level of analysis, and it also changes in context of use.

Every aspect of intelligence is HUMAN. From requirements definition which is not done at all by the US secret world, to collection management to processing to holistic analytics and true cost economics (also not done) to decision-maker dissemination & explanation (done very very badly on very very limited topics in isolation from one another) it is the HUMAN factor that makes everything work (or not).

The HUMAN aspect becomes particularly important when leaders of intelligence and integrity commit themselves to both total M4IS2 as a philosophy & practice, and to the idea of a Smart Nation that is devoted to the well-being of the public in every possible respect, bringing together the eight tribes while using the military to manager a local to global world brain that also promulgates Open Source Everything Engineering (OSEE).

My most current work on where I wish to go is below.

Answers on OSINT for India 36: Where Should the Open Source Agency Reside within a National Security Structure?

Sir, You have agreed with BGen James Cox, RN CA, with respect to the need for a separate Open Source Agency equivalent to the separate agencies for signals, imagery, and human intelligence. Given the nature of this agency as a direct support element to decision-makers including the national legislature and domestic customers including governors and mayors, where should such an agency reside within a national security structure?

[2013 BGen James Cox, CA \(Ret\) On the Record on Open Source Information versus Open Source Intelligence versus Secret Intelligence](#) is the record of Jim Cox's conclusion.

I have given this question a great deal of thought over the years. In my experience the secret agencies cannot be trusted to do Open Source Intelligence (OSINT) properly, and the Cabinet agencies are controlled by special interests and

do not know or care to know how to do OSINT in the public interest, nor do they wish to explore the beneficial possibilities to the public of Open Source Everything Engineering (OSEE) –as I recently stated, in the below video and accompanying graphic, most — not all but most — of our federal, state, and local officials are compromised by bribery, blackmail, or brainwashing.

[Constitutional Sheriffs Stop Federal & State Abuse — JOIN THEM!](#)

Patriots & Pastors Should Join CSPOA!

Elected and appointed "leaders" at the federal, state, and local levels have become tools of the Deep State. Most – not all but most – are more often than not bribed, blackmailed with Satanic Pedophilia entrapment a la Jeffrey Epstein, or brainwashed (MKULTRA). Only the sheriffs, pastors, and LOCAL magistrates represent the interest and will of the local people.

<https://cspoa.org> & <https://unrig.net>

Remember that my ideas have evolved. OSINT is half of the mission of the Open Source Agency (OSA), while Open Source Everything Engineering (OSEE) is the other half. As President Trump continues to work behind the scenes on the socio-economic, ideo-cultura, and techno-demographic “resets” intended to destroy the Deep State and restore the sovereignty of We the People, first in the USA and then everywhere else, there are three initiatives that come together going forward:

01 Constitutional Sheriffs deputizing armed citizens to say no to corrupt federal, state, and local officials (<https://cspoa.org>)

02 #UNRIG Election Reform Act, twelve points including paper ballots counted publicly onsite (<https://unrig.net>).

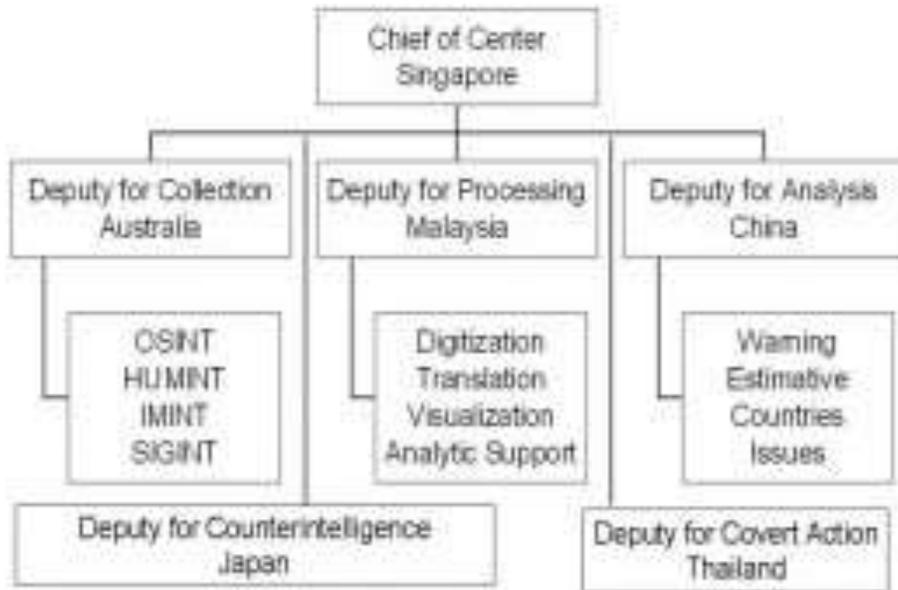

03 An OSA — and ideally a restructuring of the government — to create a totally independent public information and intelligence enterprise that is able to simultaneously re-invent education, engineering, entertainment, intelligence, media, and research.

In light of the complete compromise of all our institutions, something I wrote about in my preface, “Paradigms of Failure” to the book Election 2008: Lipstick on the Pig, I believe we need a new national agency and network that is completely self-sustaining and completely independent of executive, legislative, and judicial authority at all levels. Its mission is to tell the truth, integrating holistic analytics, true cost economics, and OSEE to help leaders at all levels create peace and prosperity for their citizens at the lowest possible true cost in the shortest possible time. Ideally the founding leader of such an agency — I am uniquely qualified — should be appointed for life. There is something to be said for this agency being a multinational agency with funding from all countries who wish to participate by both contributing to the local to global network, and maintaining their own M4IS2 Decision Support Centre as shown below, to support and also draw on their eight tribes of information while interacting with counterpart organizations everywhere else.

In the ideal every country would also have an M4IS2 “Station” that is mostly open source but also does secrets against non-state criminal actors and secret counterintelligence against traitors within each state and region.

Multinational - Operational

There is no question but that academia including science and social science has been completely compromised. Commerce, government, most law enforcement agencies, the judiciary, and the media are completely compromised. Entertainment is in service to Satanic pedophiles and the UK – Vatican – Rothschild City of London complex that treats war and disease and poverty as profit centers.

IF a country can establish both Constitutional sheriffs and pastors along with #UNRIG election reform, THEN the agency should be a direct report to the national executive leader with a mandate to provide direct support to the secret agencies, the Cabinet, provincial and municipal governors, and a form of oversight and quality control support to everyone else, particularly universities and media.

An alternative is to use Web 3.0 including crypto currency and micro-cash transactions to create a World Brain that is independent of all governments and also unable to be censored or deplatformed by the elements that now work for the Deep State, notably the BigTech social media giants that are totally out of control and labeling patriots as violent extremists.

Within the USG the Office of Management and Budget (OMB) has twice approved an OSA at Final Operating Capability of \$2B, and two separate commissions — the Aspin Brown Commission on Intelligence Reform and the 9/11 Commission — as well as the National Security Act of 1992 that was blocked by Senator John Warner of Virginia, have recommended a separate OSA at the national level that cannot be manipulated by the secret agencies or Cabinet agencies captured by the Deep State and its complexes (e.g. food, military-industrial, pharmaceutical).

Answers on OSINT for India 37: Computer-Aided Tools for Analysis

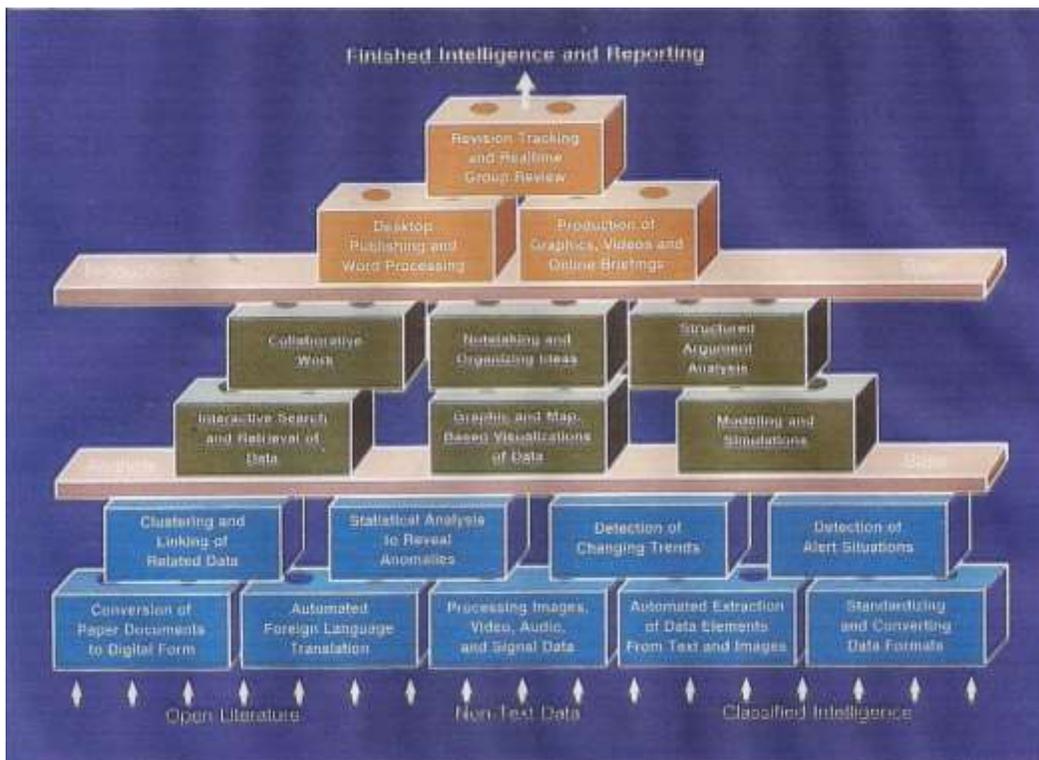

Sir,

You have made frequent reference to computer aided tools for the analysis of science & technology. Can you please explain the below diagram?

The above is a black and white version of the below, which was created by Diane Webb and Dennis McCormick under the supervision of Gordon Oehler, then Director of the Office of Scientific & Weapons Research in the Directorate of Intelligence at the Central Intelligence Agency.

Although the document below was published in 1989, I had the draft in hand in 1986 when the CIA created the Artificial Intelligence Staff in the Office of Information Technology in the Directorate of Administration, around me.

[1989 Webb \(US\) CATALYST: Computer-Aided Tools for the Analysis of Science & Technology](#)

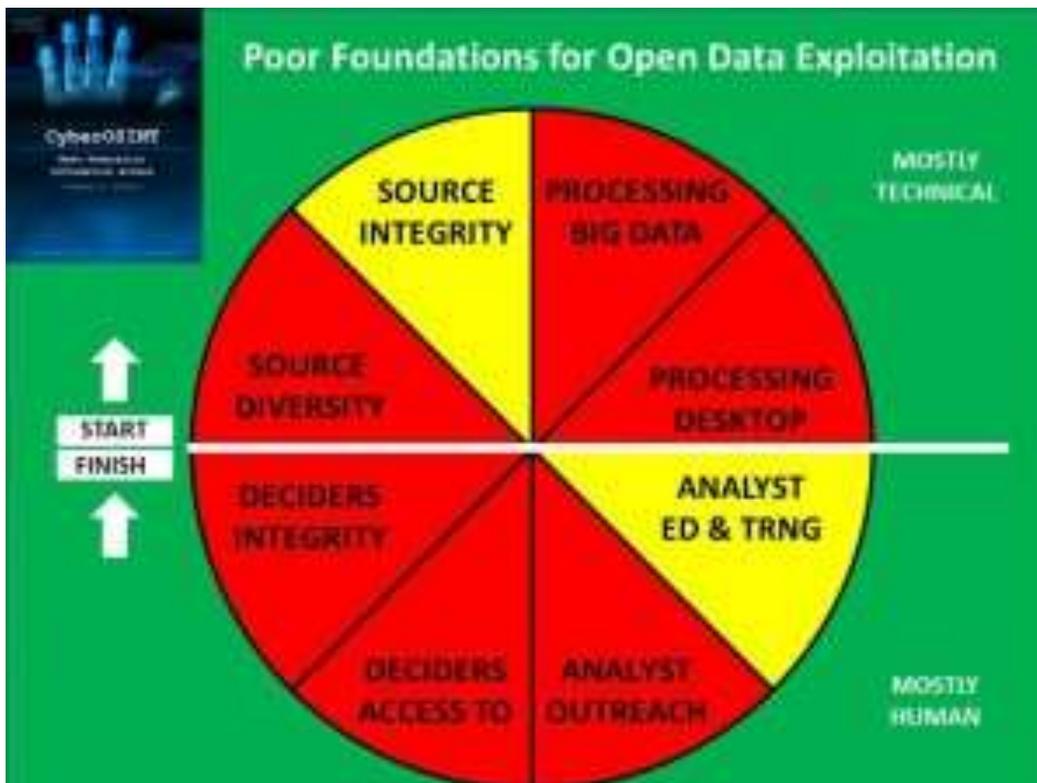

Put bluntly, CIA has known what it needed in the way of sense-making tools for analysts since 1986, and it still does not have these tools today because a series of CIA leaders have been more focused on dirty tricks (drone assassination, rendition and torture, regime change, budget building) than they have on their actual mission, which is the production of decision-support for the President and other leaders of the US Government.

What Diane and Dennis and Gordon — I knew them all — were trying to do was move analysts away from hard copy paper files and far beyond the Microsoft Lotus Notes publication environment that was the CIA standard at the time — and a very low standard because video production and conferencing were in their infancy.

The middle section provides tools for organizing and evaluating intelligence once raw data has been converted into useful information.

The lower section deals with the very large challenges of ingesting and organizing unstructured data in many languages and mediums. CIA still cannot do this today in the holistic manner envisioned by Diane, Dennis, and Gordon, and CIA still does not do true cost economics or strategic generalizations.

Below is a graphic from my most recent negative appraisal of the current state of information technology for intelligence:

In the above graphic red means totally dysfunctional while yellow means partially (and largely) dysfunctional. None of the eight slices — half mostly technical half mostly human — are anywhere near full functionality with integrity.

Steele, Robert. "[Foreword](#)," in Stephen E. Arnold, [CyberOSINT: Next Generation Information Access](#), Harrods Creek, KY: Arnold Information Technology, 2015.

And here is my most recent formal published work on the urgency of creating tools for augmenting human intelligence.

Steele, Robert. "[Augmented Intelligence with Human-Machine Integrity: Future-Oriented Hybrid Governance Integrating Holistic Analytics, True Cost Economics, and Open Source Everything Engineering \(OSEE\)](#)," in Daniel Araya. [Augmented Intelligence: Smart Systems and the Future of Work and Learning](#). Bern, CH: Peter Lang Publishing., 2018.

I will add one more thought. We still do not have tools for security sharing information across tribal lines (the eight tribes — academic, civil society, commercial, government, law enforcement, media, military, non-profit). Nobody in a leadership positions actually cares about intelligence or decision-support — nor are they held accountable for being mediocrities.

We need tools for data discovery, sense-making at the individual and collective levels, sharing across all sorts of boundaries, and we also need tools for communicating complex concepts to decision-makers with the attention span of a gerbil that needs to pee.

Nobody, anywhere, is being serious about addressing these challenges in an integrated manner that would lead to peace and prosperity for all.

My most current work on where I wish to go is below.

Answers on OSINT for India 38: OSINT is Acquisition Not Collection

[Design](#)

0Shares

Sir,

This excellent person very senior retired officer speaks of OSINT collection rather than acquisition. Did you not make a vital distinction of this point in your past writing and speaking?

[Q: Has India been utilizing Open Source Intelligence? How can OSINT be institutionalized in India?](#)

CORRECT. Open Source information is ACQUIRED rather than COLLECTED, and this has huge legal and political implications as well as financial. The secret sources pretend to use secret methods that are actually openly known to all our peer competitors including the British and Israelis who steal everything they can from within while the Chinese, Iranians, and Russians both outclass us and know everything about our

secret sources and methods.

Rule 18

Collection doctrine more sophisticated

FIND – free, internal

- FIND the data if you already know it

GET – free, allies

- GET the data if it can be gotten free from an ally or NATO or the church

BUY – low cost

- BUY the data from the private sector

TASK – expensive

- TASK classified collectors as a last resort

In 2002 I published my second book, [*The New Craft of Intelligence*](#), and included a chapter on the [new rules for the new craft](#), none of which are respected (or understood) by the current “leaders” of our decrepit and dysfunctional US secret intelligence archipelago of competing fiefdoms.

None of the above four functions is collection in the legal and political sense. They are all above-board acquisition.

Yes, it is necessary to conceal the ultimate client and context sometimes, but the Open Source Agency as an intermediary, with its many levels of sub-contracting including general managers, private investigators, journalists, professors, and so on, Finds, Gets, Buys, or as a LAST resort, says it cannot obtain the data legally and ethically, and thus the requirement transfers to secret collection.

My most current work on where I wish to go is below.

Answers on OSINT for India 39: How Are Open and Closed Sources Related?

Sir,

Which of these three assumptions is closest to your decades of experience?

- A. Open sources are richer than the closed sources.
- B. Open sources are as rich as the closed ones?
- C. Open sources are the chiseled-out bits of closed sources which when put together can tell us about the closed sources they owe their existence to?

General Tony Zinni, USMC (Ret), then Commanding the US Central Command (USCENTCOM) engaged in two wars and twelve Joint Task Force (JTF) actions, is on record as saying that secret sources provided him with, “at best” 4% of what he needed to know.

USA \$75B/Year = 4% “At Best”

80% of what I needed to know as CINCENT I got from open sources rather than classified reporting. And within the remaining 20%, if I knew what to look for, I found another 16%. At the end of it all, classified intelligence provided me, at best, with 4% of my command knowledge.

What he did not address was the reality that most of what he needed to know, while available from open sources, was not actually discovered, discriminated, distilled, and delivered (D4) to him.

I will answer your questions directly and succinctly and then provide some concluding comments.

A. Open sources richer than the closed ones?

Open sources are vastly richer than closed sources in that they provide vastly more detail about vastly more topics and when properly developed — which no one is doing today — paint a mosaic of the past, present, and future that is impossible to replicate with closed sources.

Both open and closed sources suffer from the same challenges that Ben Gilad identified in his book, [*Business Blindspots—Replacing Your Company’s Entrenched and Outdated Myths, Beliefs and Assumptions With the Realities of Today’s Markets*](#):

“Top manager’s information is invariably either biased, subjective, filtered, or late.”

A major problem with all “decision” systems that I have encountered is that they are driven by an obsession with budget share, personal power, and too often corrupted by bribery, blackmail, and/or brainwashing. They are not evidence-based or focused on the public or stake-holder interests, and “deciders” are not held accountable for true costs of bad decisions as long as those doing the bribing, blackmailing, and/or brainwashing are getting their desired outcomes.

Open sources are NOT useful in explaining plans and intentions that make absolutely no sense at all from an evidence-based perspective. For example, starting a war to achieve a number of illicit objectives including profit taking, money laundering, human trafficking, organ harvesting, and the settlement of Deep State scores with those who oppose them (Libya and Syria are examples), is not well explained by open sources.

Here is my original estimate of the value of open sources in relation to each of the major

Utility of Open Sources

Economic and social threats, including	95%
• Poverty	99%
• Infectious Disease	95%
• Environmental Degradation	90%
Interstate conflict	75%
Internal conflict, including	90%
• Civil War	85%
• Genocide	95%
• Other Large-Scale Atrocities	95%
Nuclear, radiological, chemical, and biological WMD	75%
Terrorism	80%
Transnational organized crime	80%

[2008 Open Source Intelligence](#) (In Loch Johnson (ed) Strategic Intelligence Vol 2, Chapter 6)

I must emphasize, closed sources are ESSENTIAL in dealing with treason, white collar as well as black collar crime, and Satanic pedophilia. The secret world has been useless against those threats because the secret world is part of the Deep State and THRIVES on treason, crime, and Satanic pedophilia as best represented by the Zionists, Vatican, and the highest levels of freemasonry.

It is also important to note that closed sources take much more time to develop if done correctly (most CIA human secret agents are completely compromised, I do not believe CIA is capable of doing proper clandestine human intelligence anymore, and I consider the FBI's counterintelligence capability to be totally compromised at the same time that the FBI and CIA are themselves part of the treason-crime-pedophilia network running the USA).

B. Open sources are as rich as the closed ones?

The best answer on this option is that it depends. I like the 80-20 rule. For any given question, 80% of the answer will be easy (open) and 20% of the answer will be difficult (closed). It is also vitally important to distinguish open and closed sources in relation to time, energy, and cost.

It is of course very stupid to use a spy when a schoolboy will do. As a general rule open sources in all languages should be fully harvested before investing in close sources on any given topic.

Below shows two estimates of the relative cost of both integrated open and close source processing toward conclusions, and the relative cost of four secret human intelligence functions versus eleven open human intelligence source streams.

The greatest failings across both decision-makers and collectors and producers of intelligence are failures of integrity and imagination. No one is held accountable for failing to get the requirement right, acquire all relevant open information before investing and risking closed sources, and do proper holistic analytics with integrated true cost economics on both single issues and complex intersecting issues.

C. Open sources are the chiseled out bits of closed sources which when put together can tell us about the closed sources they owe their existence to?

I coined the term Black OSINT in the 1990's to describe open sources that were so explosively valuable in relation to normally closed programs that they would be immediately closed if anyone were aware we were tapping into them. This generally referred to foreign language analog sources and overt human contacts that are not normally developed by the CIA or DIA.

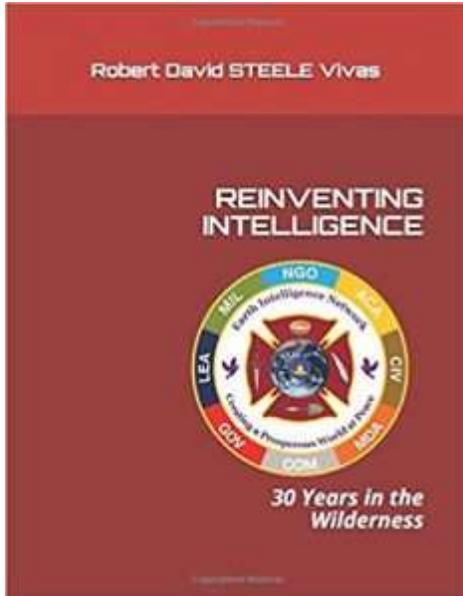

All closed sources are open sources that have been classified. The 6,000 patents that have been classified are a good example of this — all of those patents were created in the open (or at least in a gray limited disclosure environment) and then classified after the fact. Even extraterrestrial technology including free energy, anti-gravity, cloning, and healing technologies were "open" before they were "closed."

In my view it is not technologies or installations or budgets that are truly closed but rather "plans and intentions" that do not conform to the public interest and to what a normal ethical person would do given open evidence as to costs and benefits. EVIL IS A CLOSED SOURCE. We will not defeat evil until the secret intelligence agencies stop being part of the network of evil.

I recommend the below book, to which I wrote the Foreword, on this point.

Answers on OSINT for India 40: OPSEC & Counterintelligence

Sir,

What are the similarities and differences between OPSEC and Counter Intelligence?

Operations Security (OPSEC) is a process that identifies critical information to determine if friendly actions can be observed by enemy intelligence, determines if information obtained by adversaries could be interpreted to be useful to them, and then executes selected measures that eliminate or reduce adversary exploitation of friendly critical information.

Learn more at [Wikipedia / Operations Security](#).

In theory ostensibly clandestine operations personnel should be exercising discreet and pervasive counter-surveillance measures and ensuring they are not being tracked by any means including chemical dust on their shoes from a

compromised maid. In reality CIA and most secret intelligence services appear to practice impunity rather than cover, and all of our clandestine cases officers working out of official cover installation are blown within weeks of arrival.

There are two forms of counterintelligence: defense counterintelligence, and offensive counterintelligence.

Defensive counterintelligence consists of standard security protocols including the vetting of applicants and agents; controls over and monitoring of access to classified information, periodic investigations, physical security, and in some cases, active clandestine surveillance of both suspected traitors and officers from foreign as well as domestic powers hostile to the public interest.

Offensive counterintelligence is the clandestine penetration of foreign and domestic powers hostile to the public interest and requires the most extraordinary clandestine measures possible.

[Review: To Catch a Spy – The Art of Counterintelligence](#)

[Review: Red Sparrow \(Espionage Fiction\)](#)

[Review: Palace of Treason \(Espionage Fiction\)](#)

[Review: The Kremlin's Candidate \(Espionage Fiction\)](#)

It is useful, in evaluating intelligence operations, to think about failure points. I myself focus on leadership, selection of personnel, training, and results. Leadership is responsible for accountability, integration, and impact.

Answers on OSINT for India 41: Training

[Design](#)

0Shares

Sir,

What are the training and skill requisites for someone working in OSINT?

Stevan Dedijer

Stevan Dedijer (OSIP) is the father of business intelligence defined as decision support, not mere piecemeal internal data mining as the term is used today. Born in Croatia, he drove General Westmoreland in WWII, became a Swedish citizen and professor at Lund University, and returned to Croatia to die.

When Admiral Stodeman over-ruled CIA in 1992 ("we'll come if the conference is SECRET U.S. Citizens Only") we did not advertise the event and expected 150 people. 675 or so showed up, including a 15-person delegation from Sweden led by Stevan Dedijer.

1992 The OSS, Intelligence, Secrecy, and Open Sources

"Know who knows."

In 1992 Dr. Stevan Dedijer, the father of Commercial Intelligence out of Lund University Sweden (himself born in Croatia and with service as General Westmoreland's driver in WWII) led a delegation of 15 Swedes to my first conference, OSS '92, persuaded me to add him to the program during a break, and used his time to shout out this basic message:

KNOW WHO KNOWS!

Easily half of OSINT leadership and management is ETHICS, and the other half is knowing who knows.

The crap that is being produced by over \$2 billion in spending on cubicle rats surfing the Internet is a betrayal of the public trust.

Below is a "bare bones" OSINT cell.

Standard OSINT Cell

Centralized discovery, decentralized exploitation

Outside the Wire – No Internal Constraints – Serious Money (in the Millions)

Each of these six people should be someone with at least a decade of experience with commensurate education preferably at the graduate level. Each of them should have experience in harvesting open sources within their respective domains. Only the collection manager and the analyst need have clearances, and this can be optional.

The Internet out-sourcing person is skilled in identifying and hiring a CONSTANTLY-CHANGING mix of people who are BOTH subject-matter experts (e.g. in agriculture, energy, whatever) AND skilled at using multiple forms of search. Arno Reuser may well be the top Internet researcher in the world — any country that has not consulted him is almost certainly deficient in their exploitation of the Internet for substance. I regard those who focus on social media with scorn and contempt.

The commercial online out-sourcing specialist is skilled at leveraging those who render information services as a business. This includes intermediary services such as SciTech Strategies and the Institute of Scientific Information, information brokers such as Mary Ellen Bates, private investigators, free lance journalists, general managers, academics and others, all of whom can be hired as short-term consultants for a SPECIFIC combination of subject-matter expertise, language qualifications, and in many cases, locational presence (e.g. Burundi).

The primary research specialist — Risa Sacks in her time was the gold standard — knows how to use the telephone combined with citation analytics and mention in media to very rapidly identify the top 3-12 people in the world on any topic who are NOT published — non-profit field representatives, child advocacy observers in specific places, and so on. This person is skilled at creating “on the fly” human networks based on word of mouth recommendations and the ability to rapidly survey the human domain for any given question. This person is particularly skilled at leveraging third world recent retirees from any given government or private sector organization.

The finance officer is there to make rapid unconventional payments without all of the bureaucratic nonsense that accompanies major contracts that are 80% fraud. Western Union payments, credit card payments, PayPal and STRIPE and DropBox payments are all easily used to do \$250 to \$25,000 payments.

As a general rule, the OSINT team should be skilled at out-sourcing on the fly and be very small. Anyone investing in an army of full-time cubicle rats surfing the web is wasting money and not being serious. Most of those offering academic expertise are frauds — they limit themselves to a small range of English-speaking professors who are eligible for clearances, and they do not do serious multi-lingual or holistic analytics.

Answers on OSINT for India 42: Google Maps Resolution

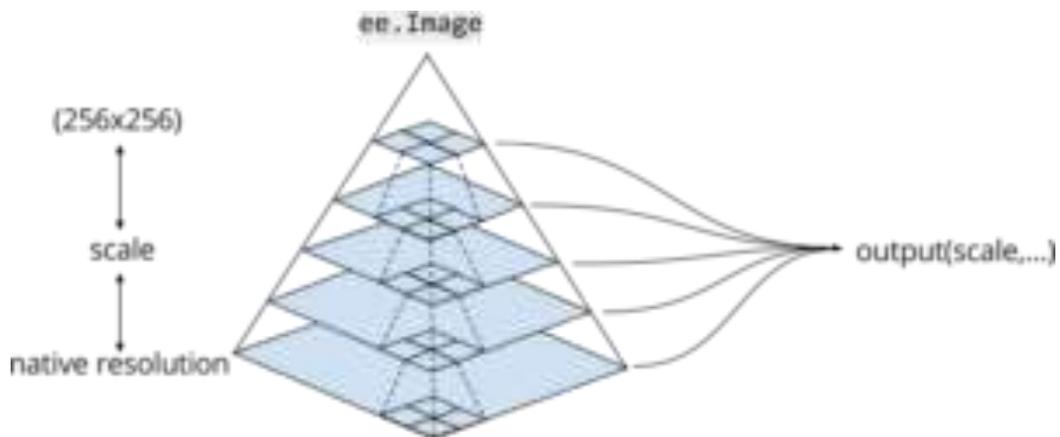

Sir,

What is the scale of Google maps or Bing maps?

There are different versions of Google Maps. There is the high resolution unblocked maps for government customers. There also the down resolution maps for consumers. Here's what Google says:

<https://developers.google.com/earth-engine/guides/scale>

In theory Google Maps could be the foundation for a World Brain in which every datum about everything is connected in near real time. In fact neither Google nor Amazon seems to get this yet, and neither do the US secret intelligence agencies.

Answers on OSINT for India 43: Role of OSINT in All-Source Analysis

Sir,

Please explain with illustrations and examples role of OSINT in all source analysis

It is irresponsible, unprofessional, and a betrayal of the public trust to ever task a classified collection channel without first establishing what can be known from open sources of information in all languages and mediums.

We do not do Whole of Government information sharing and we do not do Smart Nation information sharing. We do not do multinational information sharing.

Rule 18

Collection doctrine more sophisticated

- | | |
|-------------------------------|--|
| FIND -- free, internal | • FIND the data if you already know it |
| GET -- free, allies | • GET the data if it can be gotten free from an ally or NATO or the church |
| BUY -- low cost | • BUY the data from the private sector |
| TASK -- expensive | • TASK classified collectors as a last resort |

The three questions that should always be asked before tasking a secret collection channel are implied above:

01 Do we already know this? Where can we FIND this in our existing databases or human expert archipelago?

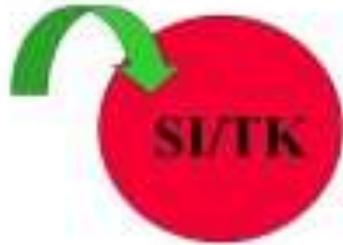

02 Can we GET this free from allies including non-governmental organizations, corporations, etcetera.

03 Can we BUY this (or most of this) from private investigators, information brokers, and other sources of open source information including academics?

AFTER all possible gains have been made from asking and acting on the first three questions should the fourth question be asked:

04 WHICH of our secret collection channels (HUMINT, SIGINT, IMINT, MASINT) is best able to go after what we need to know but cannot get from open sources? And if all of them, how do we manage them for best effect?

Competing OSINT Models

Selective Importation
System High/Firewall
Very Expensive
Difficult to Share

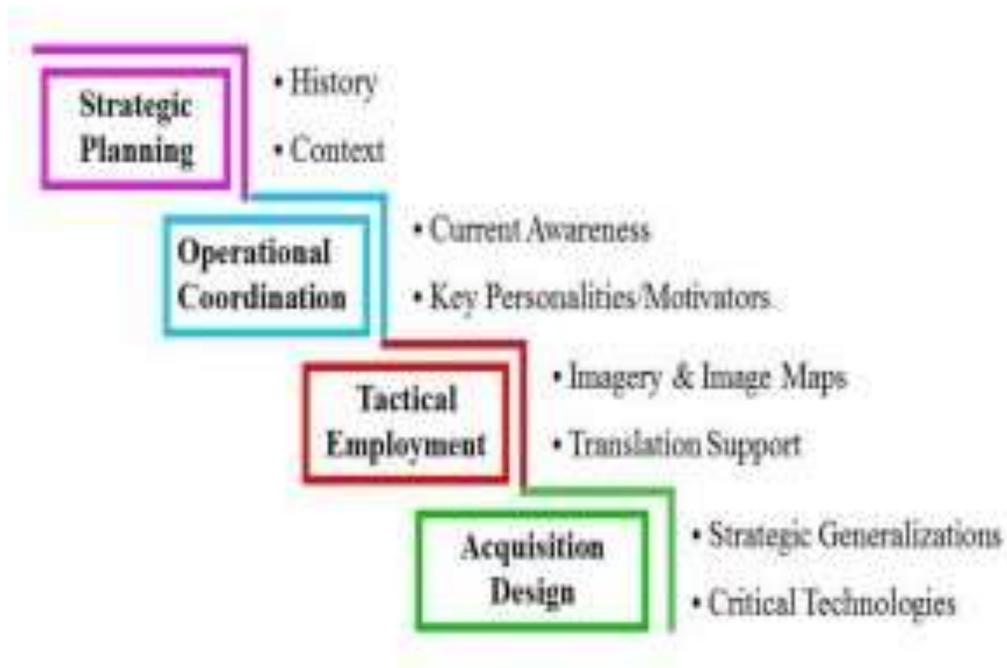

Just Enough, Just in Time
Default to Validated OSINT
Relatively Inexpensive
Sharing Stimulates Sharing

OSINT Competing Models

The current secret world approach to OSINT, on the left, is retarded and unprofessional.

At the analytic level, OSINT should provide the following as context for the all-source analyst as a manager of the topical intelligence process.

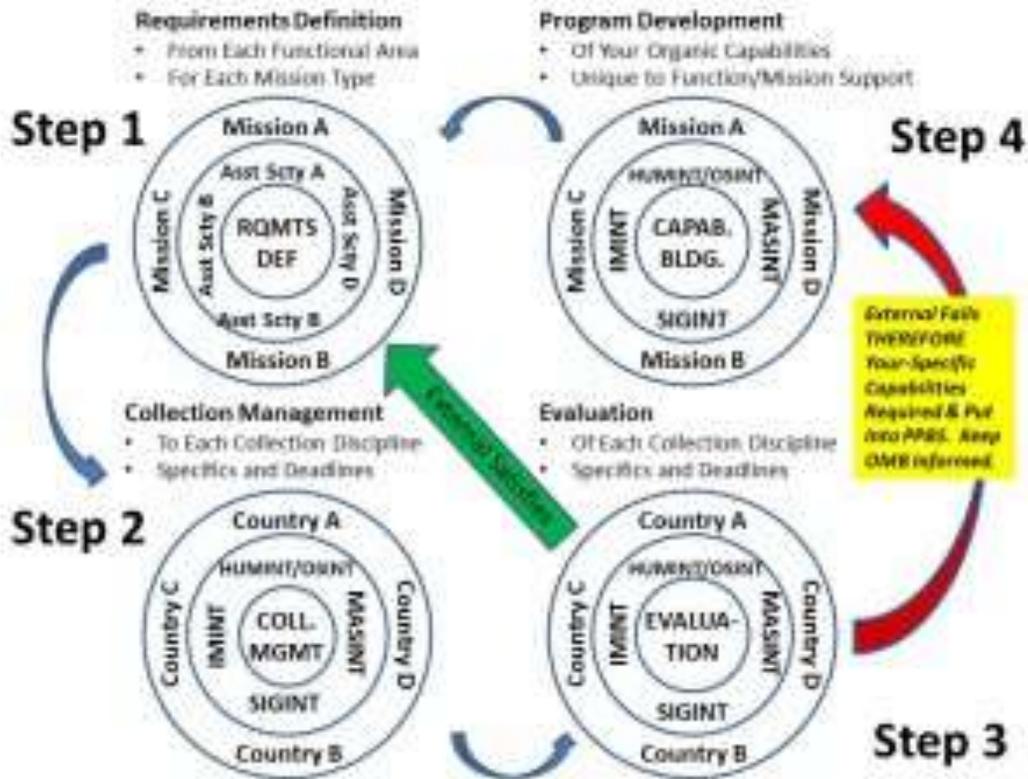

OSINT should be used by the all-source analyst to:

01 NOT use spies where a schoolboy will do.

02 AUTHENTICATE secret sources by validating, for example, human agent reports or signals intercepts or secret imagery, with what can be obtained from open sources.

03 PROTECT secret sources by devising “good enough” open sources that can be disseminated with confidence from unacknowledged secret sources.

04 REFINE what cannot be known from open sources that should be put into collection requirements for secret sources.

As I wrote in the four seminal chapters below, OSINT is the FOUNDATION for all-source intelligence, and OSINT is the fastest means of radically growing the now-retarded intelligence profession to the point where it can address all threats, all policies, all costs, in a continuous responsible manner.

Steele, Robert. "[Augmented Intelligence with Human-Machine Integrity: Future-Oriented Hybrid Governance Integrating Holistic Analytics, True Cost Economics, and Open Source Everything Engineering \(OSEE\)](#)," in Daniel Araya. *Augmented Intelligence: Smart Systems and the Future of Work and Learning*. Bern, CH: Peter Lang Publishing., 201

Steele, Robert. "[The Evolving Craft of Intelligence](#)," in Robert Dover, Michael Goodman, and Claudia Hillebrand (eds.). *Routledge Companion to Intelligence Studies*, Oxford, UK: Routledge, July 31, 2013.

Steele, Robert. "[The Ultimate Hack: Re-Inventing Intelligence to Re-Engineer Earth](#)," in U. K. Wiil (ed.), *Counterterrorism and Open-Source Intelligence*, Lecture Notes in Social Networks 2, Springer-Verlag/Wien,

Steele, Robert. "[Open Source Intelligence \(Strategic\)](#)," in Loch Johnson (ed.), *Strategic Intelligence: The Intelligence Cycle*, Westport, CT: Praeger, 2007, Chapter 6, pp. 96-122.

The existing leaders of the US secret intelligence community are retarded, unprofessional, and in some instances outright traitors in constant betrayal of the public trust.

Answers on OSINT for India 44: Collection Pathologies in a Typical Embassy

Sir,

What was the bottom line conclusion from your second graduate thesis?

Steele, Robert. [National Security C3I3H3–Command, Communications, Computing, Inter-Agency, Inter-Disciplinary, Inter-Operability, Heuristics of the Community Intelligence Cycle](#), Norman, OK: University of Oklahoma, MPA Thesis.

NOTE: above link repaired. Here also is the direct PDF (109 Pages):

[1987 MPA Thesis C3I3H3 Steele on Strategic Infomation Mismanagement](#)

Dear Colleague,

My bottom line conclusion was this:

In US Embassies the diplomats are in the minority and do not have money for entertainment or buying open source information. The budget for entertaining and engaging foreigners is generally allocated 50% to the Ambassador, 25% to the chiefs of section, and 25% to the other officers. This means that the average diplomat can afford to host one reception every three months and very little else. The diplomats are out-numbered by singleton representatives from the various Cabinet Departments that do not trust the Department of State to represent them (which is particularly logical for law enforcement elements such as the DEA and FBI). The only people with real money to spend — no limits — are the spies but they demand that anyone they give money to be a traitor. Spies do not do open source intelligence in the field.

My most current work on where I wish to go is below.

AMIY KRISHNA

Himachal Pradesh National Law University, Shimla

FIRST

I watch with scorn and disdain as Carmen Medina, CSIS, and the US Army all pretend to have finally realized we need an Open Source Agency while avoiding any mention of me and my 30 year fight blocked at every turn by CIA and others lacking in intelligence, integrity, and imagination.

Here are the posts I created to help Amiy Krishna whom I hope to see rise rapidly in the ranks of the intelligence service in his county, India.
