Forward any sites you feel should be added to me at ben.benavides@gmail.com

This is a living document and at the time of publication all links were active but don't give up if you get the "Page Not Found" message. If a link does not work, try copying the link to the URL window. If it still doesn't work place the cursor at the end of the URL address and backspace to the first slash and hit the enter key. If it still does not work keep backspacing to the next slash and press the enter key. Keep doing this until you either get a hit or enter the home page. Once in the homepage you should be able to find what you are looking for. But we all know the chaotic nature of the WEB and over time some sites will be pulled off or no longer function. If this is the case, you have a final recourse - the wayback machine, <http://www.archive.org/>. Copy the entire URL and paste it into the "take me back" box in the homepage. This should take you back to the original homepage and from there you can pick up key words to find what you are looking for.

I realize also that we don't think alike. If you feel some links do not belong in a particular category let me know and I will make the adjustments. If you feel a new category should be added please justify it, and if you discover links that you think are relevant to the handbook please submit your list and I will update. Together we can create a valuable guide that is not only useful to the intelligence analyst but also beneficial to all branches of the military, and civilian agencies. The idea is to develop something that any branch (infantry, artillery, armor, etc) besides MI can use for their own intelligence gathering. Remember, "Every Soldier Is A Sensor". We could also apply this to the civilian world and say "Every Citizen Is A Sensor". A good example is the individual that spotted the smoking SUV in Times Square and alerted police to the situation. Had the contents smoldered long enough it is quite possible the situation could have turned into something more serious.

While I have tried to get you to your objective as quickly as possible, there is still no substitute for effective searching techniques. I strongly recommend looking over this very basic WEB searching techniques site <http://www.lib.berkeley.edu/TeachingLib/Guides/Internet/Handouts.html> and download the tutorial with powerpoint slides and handouts. The information is from 2009 but still very appropriate. I also like Russ Haynal's Internet Training at <http://navigators.com/opensource.html> and I think you will too. Very easy to follow and digest the information even while working at your own pace.

There are two areas one cannot get away from on the WEB, pornography and theological/political agendas. I have definitely made sure that none of the links end up with the former, but the latter cannot be avoided.

I have been advised that I probably have published too much information and have made it easier for the criminal element. All the information gathered has been through open source harvesting and anyone with even the slightest knowledge of good searching techniques will be able to gather the same information. For example, the nuclear related portions in this handbook when merged together will produce a neat little file. You can gather this same information at the public library or by visiting several blogs and merging the results. Scattered throughout this handout you will run across material like Unclassified/FOUO, Law Enforcement Sensitive (LES), Restricted, Controlled Unclassified Information, Sensitive But Unclassified (SBU) and other caveats. Again, this is all open source exploitation. I did not hack into any sites! That's my story and I'm sticking to it.

Those links that require a .mil or .gov return address are included for those authorized access, they will not work for those not authorized access.

Prior to leaving the service of the U.S. Army, I established that this is my intellectual property and there are no applicable constraints on my sharing it with the public.

Open Source Intelligence (OSINT): What It Is and What It Isn't

According to the [NATO Open Source Intelligence Handbook](#), November 2001, there are four distinct categories of open source information and intelligence.

1) **Open Source Data (OSD).** Data is the raw print, broadcast, oral debriefing, or other form of information from a primary source. It can be a photograph, a tape recording, a commercial satellite image, or a personal letter from an individual. A good example is a reporter embedded with forces in Afghanistan or Iraq. He/she is taking pictures, talking to soldiers, recording conversations and firefights, and taking notes with a pen or pencil. This is considered raw data until it goes through a conversion process to create a coherent product.

2) **Open Source Information (OSI).** OSI is comprised of the raw data that can be put together, generally by an editorial process that provides some filtering and validation as well as presentation management. OSI is generic information that is usually widely disseminated. Newspapers, books, broadcasts, and general daily reports are part of the OSI world. An example is a reporter embedded with forces who takes the raw data and converts it into a meaningful article that is printed in newspapers, magazines or broadcasted over the air waves. OSI is what a Soldier would purchase at the bookstore inside the Post Exchange in the form of USA Today or Newsweek.

3) **Open Source Intelligence (OSINT).** OSINT is information that has been deliberately discovered, discriminated, distilled, and disseminated to a select audience, generally the commander and his/her immediate staff, in order to address a specific question. In the case of a battlefield commander, it would more than likely be answering the priority intelligence requirements (PIR) or specific orders or requests (SOR). OSINT, in other words, applies the proven process of intelligence to the broad diversity of open sources of information, and creates intelligence. Example: The meaningful article above (OSI) that was created from raw data is used to support an operation. It's quite possible that a photo accompanying the article may be of a house known to harbor insurgents. The photo in the article identifies the location and now can be used to support a tailored operation to attack the insurgents.

4) **Validated OSINT (OSINT-V).** OSINT-V is information to which a very high degree of certainty can be attributed. It can only be produced by an all-source intelligence professional, with access to classified intelligence sources, whether working for a nation or for a coalition staff. It can also come from an assured open source to which no question can be raised concerning its validity (live video of an aircraft arriving at an airport that is broadcast over the media). OSINT-V is OSINT for which there are either confirming or unavailable classified sources or there are no available classified sources disputing OSINT. OSINT-V is produced only when the analyst has access to classified sources.

Example: CNN reporter takes photos and reports on a bridge. Intelligence personnel are aware the bridge is vital for the movement of insurgent supplies; however, CNN is unaware of that. Classified information confirms that such a bridge exists. This in effect validates the reporting as OSINT-V, especially if the bridge is identified to be destroyed to keep insurgents from moving supplies. But, if there isn't anything in the classified holdings to deny the existence of the bridge, it is still considered OSINT-V since this is the first time the bridge has been observed and reported, and there are other sources like other reporters to backup the findings.

People in the intelligence business are realists and know that everything cannot be monitored simultaneously; construction of new infrastructure is continuously taking place around the world. We cannot keep track of all new buildings, bridges, roads or airfields being built. This is what makes open source reporting extremely valuable. It covers the areas the classical "INTS" are not assigned to cover. The only time OSINT-V can be disputed is when there is confirming evidence to deny the information.

Summary: How do I know when I have OSINT? The simple answer is the analyst does not have OSINT until the open source information has been processed and analyzed, and supports a specific requirement. The specific requirement can be a tailored operation or simply answering a question. The

analyst has to be very careful when it comes to distinguishing between OSI and OSINT. Open source information exploitation is exactly what the name implies, that which is gathered/collected from open sources. In general, it is information that is available to the general public without restrictions unless it is copyrighted material. These include newspapers, the internet, books, phone books, scientific journals, radio broadcasts, television, individuals, and other forms. On the other hand, OSINT is an intelligence gathering discipline that involves collecting information from open sources and analyzing it to produce usable intelligence, and there isn't anything that says intelligence must be classified in order for it to have utility. In the Intelligence Community, the term "open" refers to overt, publicly available sources (as opposed to covert or classified sources); it is not related to open-source software. OSINT is distinguished from straight research in that it applies the process of intelligence to create tailored knowledge supportive of a specific decision by a specific individual or group.

How To Use Open Source Intelligence

By eHow Culture & Society Editor http://www.ehow.com/how_2126848_use-open-source-intelligence.html

Open source intelligence is a process of information gathering from public and overt sources, such as newspapers and military trade journals, that produces "actionable intelligence." Far from being the hobby of amateurs, open source intelligence is used by official military and government intelligence agencies on a regular basis.

1. Gather sources. The number of possible open source intelligence outlets is limitless. Some basic ones are newspapers, which report on things like troop and fleet movement, and even civilians who visit other countries and can make relevant observations upon return. Strategy and defense information websites, such as Jane's Group, also provide high quality information for you to harvest.
2. Pick a region or topic. Monitoring all varieties of open source intelligence across regional and topical interests takes huge amounts of manpower. To effectively use open source intelligence you should focus on one region or issue at a time. This will help you to stay on top of the latest information and will allow you to develop a background understanding of intelligence items.
3. Connect the dots. Once you have gathered your sources you need to monitor news and information in order to connect the dots. Look, for example, at how heads of state visits coincide with arms sales. Then consider troop and fleet movement against rising tensions in various regions. Use widely available technology such as Google Earth, Bing Maps 3D, and others to get views of important locations. Take all this kind of information and try to deduce the most likely intelligence information from it.
4. Test your theories. One of the best ways to test a theory that you've constructed on the basis of open source intelligence is to publish the theory. You can post theories on strategy discussion forums or you can send your piece to influential military bloggers or even newspapers. Check the responses from other members of the open source intelligence community to see what the criticisms might be.

Intelligence Gathering

By The Associated Press

Some questions and answers about the gathering and use of intelligence:

WASHINGTON (AP) — U.S. intelligence in the struggle against terrorism comes in many forms, maddeningly general, improbably precise, a game of sorts with vast consequences for winner and loser.

It's a satellite image showing tribesmen gathering in a remote area where none should be — the photograph so clear you can see the caliber of ammunition they are carrying.

It's a snatched bit of conversation between two terrorist leaders, overheard by a trusted source the terrorists don't realize is listening.

It's a stolen diplomatic cable. That's right, we steal.

Each of these sources and a multitude of others can become the tips that put an entire nation on alert, as a single tip has done from a single source just before the 10th anniversary of the Sept. 11 attacks.

Here are some questions and answers about the gathering and use of intelligence:

Q: What is intel?

A: Simply put, it is information from anywhere that the U.S. can use to its advantage in the world, either in pursuit of its goals or to protect its people. It can be as basic as a diplomat reading a local newspaper and passing on something interesting to a superior in an embassy or Washington. But it gets much more sophisticated and aggressive than that.

In counterterrorism, bits and pieces of information form a messy picture like an impressionist painting. Those collecting the signs and signals look for a pattern, eventually an image, that gives them a target to go after or tells them which target to protect.

Q: What are the main forms of intelligence?

A: Perhaps the spookiest is measurement intelligence, known as "MASINT," using far-away technology to get extremely up close and personal. The U.S. is capable of placing a sensor near a suspected terrorist hideout that can count the number of heartbeats in a room and gauge how fast they're beating. There are even efforts to understand what a "guilty" heartbeat pattern might be.

Masint, working in combination with other kinds of intelligence-gathering, was one of the clinchers in the raid that killed Osama bin Laden. The U.S. measured the approximate height of the tall man who paced beneath the trellis outside the kitchen in a Pakistani compound, to help determine bin Laden was that man.

Then there is human intelligence, or "humint," which has been around since the dawn of spycraft and is still vital. That's the tipster you cultivate and pay, or perhaps the unproven one who simply walks into a

U.S. embassy and offers information.

"Sigint," or signals intelligence, monitors or otherwise exploits radio, telephone or satellite phone transmissions. "Imint" is imagery intelligence that includes photographs showing the outlines of a nuclear power plant, obscured in desert sands, or a terrorist training base tucked in a mountainside.

Cybertracking is a newer tool, pursuing terrorists who use computers either to attack a computer network or, more often, to organize how their own human network would launch a physical attack.

Q: What happens to this mountain of raw material?

A: Each of those streams of data is captured by a multibillion-dollar worldwide network of U.S. satellites, armed drones, static blimps and high-flying spy aircraft, manned or unmanned, that suck up so much sound it takes massive computers to crunch all the data and help analysts overwhelmed by the technical information to find meaningful clues.

Sometimes these streams are collected by U.S. operatives — Americans or those in U.S. employ — who go behind enemy lines or into enemy homes, leaving behind the sensors that will provide the data.

True to its name, the Central Intelligence Agency is an "all-source" organization using all means.

Q: How do all these eyes and ears work together?

A: Sometimes they don't. After a Nigerian allegedly tried to bring down a Detroit-bound airliner on Christmas Day almost two years ago, it emerged that his father had warned U.S. diplomats about his son's possible terrorist sympathies, but that tip was lost in the blizzard of counterintelligence.

But in the bin Laden raid, a human source led to the compound in the Pakistani army town of Abbottabad. Signals intelligence monitored for phone calls emanating from there, and found none, because bin Laden forbade them, hoping to evade detection by just such technical means. Masint was derived from the imagery taken by drones and satellites.

All of this helped to convince CIA analysts they had found their man and persuade President Barack Obama to approve a dangerous and diplomatically risky raid into Pakistani sovereign territory.

Q: How is all of this intel sorted through so that the real threats are detected and averted?

A: The ever-present risk is that they won't be. One of the failings of pre-9/11 counterintelligence was that information was jealously guarded by the individual intelligence agencies. Word of a potential plot to fly planes into U.S. landmarks was received by one agency. Another agency had word terrorists might be attending flight school. Each organization kept to itself the dots of information that, when connected, could have revealed the larger pattern of a massive terrorist plot.

Before raw data and human tips can be called "intelligence," they must be analyzed, and if possible, corroborated. The CIA alone has 2,500 people in its Directorate of Intelligence devoted to that task. There are thousands more across the 16 intelligence agencies, sifting raw data, and cross-comparing within their own agencies, and with others, to spot a pattern.

Q: What does it mean to receive — and warn the public about — a credible and specific but unconfirmed threat, as in the latest case?

A: A credible threat means it was heard from a trusted source, not just anyone. Specific means the U.S. has details about when, where or how an attack might unfold. When a threat is specific and credible but unconfirmed, that means intelligence officials haven't been able to validate the information even though they trust the source who gave it to them.

This particular threat is not unusual, but it's being taken so seriously because it comes days before the 10th anniversary of 9/11, a date al-Qaida has eyed for attack.

Q: How is the intel being analyzed in the latest threat?

A: Right now, teams of analysts are combing through information gleaned from one trusted source, who heard that a small group of attackers, perhaps from Pakistan, might blow up a car bomb in New York or Washington. One or all of the attackers might be from Pakistan. Newly minted al-Qaida leader Ayman al-Zawahri might be behind it.

These analysts are looking for anything to corroborate that report in the reams of information they've gathered tracking travelers to the U.S. from Pakistan. U.S. spies overseas will be going back to their sources to see if anyone has heard the same rumor.

Everything unfolds in a hurry.

"You don't have the luxury of vetting the source and then disseminating the information," said Phillip Mudd, a former top counterterrorist official at the CIA and the FBI. "You have to tell everyone what you heard and then try to prove the information is legitimate.

He said he would be directing analysts to pore over everything that can be gleaned from flight and passport logs of potential foreign suspects who have traveled to the U.S.

"Figuring out who would-be attackers are, or even whether they exist, could take months, where the drumbeat of national security wants answers in minutes or days," Mudd said.

Q: What rules do U.S. intelligence-gatherers have to play by?

A: Looser rules than for most people.

The CIA operates under the U.S. law known as Title 50 — literally a license to break laws in foreign countries, by committing espionage, persuading a local official to commit treason, or in extreme circumstances, to go into a foreign country and target an al-Qaida suspect for killing or capture. Title 50 operations are covert, meaning the U.S. never intends to acknowledge them. Other intelligence agencies, such as the eavesdropping National Security Agency and the new Cyber Command, routinely operate under Title 50 as well.

Q: Ultimately, doesn't it all come down to getting lucky — or unlucky?

A: It can feel that way. There is a favorite expression among intelligence officials, memorably if confusingly uttered by former Defense Secretary Donald H. Rumsfeld, that captures the essence of their work:

"As we know, there are known knowns; there are things we know we know. We also know there are known unknowns; that is to say we know there are some things we do not know. But there are also unknown unknowns — the ones we don't know we don't know."

Associated Press writer Eileen Sullivan contributed to this report

OSINT Tools: The Foundation for Social-engineering and Phishing Attacks

[Marc Bleicher](#)

Have you ever wondered how someone sitting 7,300 miles away is able to easily penetrate an organization's network? How someone who has never had legitimate access to a network can learn more about that organization than most of its own employees? It's actually pretty easy, given the right skill set and a *lot* of patience. I know cyberwarfare isn't a new thing, but it's still impressive to think that someone on the other side of the globe, a few continents away, is able to wreak so much havoc.

I recently gave a presentation to a group on the topic of open-source intelligence (OSINT). I have given this as a hands-on presentation at conferences and workshops in the past. In those workshops, my audience is usually made up of IT admins, company legal departments, and a handful of individuals from across the law enforcement community. In the weeks leading up to each workshop I always request a list of attendees from the conference sponsor, which I use to gather OSINT on the attendees. On the day of the workshop, before everyone arrives, I go around and put nametags at their seats along with a notecard that is specific for each person. When the session starts, I ask everyone to flip over the notecard and read it – to see if it's accurate. On that notecard is a complete bio and profile comprised of information that I was able to get using various publically available resources. I try to keep the notecards at a G to PG level, so they usually just include first/last name, DOB/place of birth, maiden names, parents names, kids names, schools attended, address history, phone numbers, job history, associates, affiliations, hobbies, etc. Although this isn't your typical icebreaker, it does set the mood for the day as well as elicit a few awkward stares. But if you've signed up for a class entitled "OSINT and the Internet as an investigative tool" then it's all fair game. Anyway, the point of the exercise is to illustrate to anyone who may have been naïve just how easy it is for someone like me, who doesn't work for a three-letter intel agency, to obtain this level and amount of information.

What is OSINT?

Open-source intelligence refers to finding and analyzing information from any source that is publically available. OSINT has been used for decades by the intelligence community. Only in the last 10 to 12 years has there been a methodology change. Prior to the Internet age, OSINT consisted of analyzing newspapers, magazines, radio and TV from across the globe. It wasn't until the Internet was accessible to everyone that OSINT became popular and used by all sectors. As companies evolved and technology advanced so did the competition to be the best in the market. What followed was a variety of companies that started conducting competitive intelligence against one another – or cyberespionage as its known today. During this time, as more companies joined the online community, they began to realize the efficiency of using the Internet as a tool for obtaining "competitive intelligence." It was then discovered that a lot of nation-states were also using OSINT for their own nefarious purposes. We now know that certain nation-states have entire teams devoted to conducting reconnaissance using the Internet to acquire as much intel on U.S. companies, the government and our interests abroad. To put it bluntly, China and Russia figured out long before we did that OSINT was a key to the success of their subsequent hacking operations that have become commonplace over the last decade.

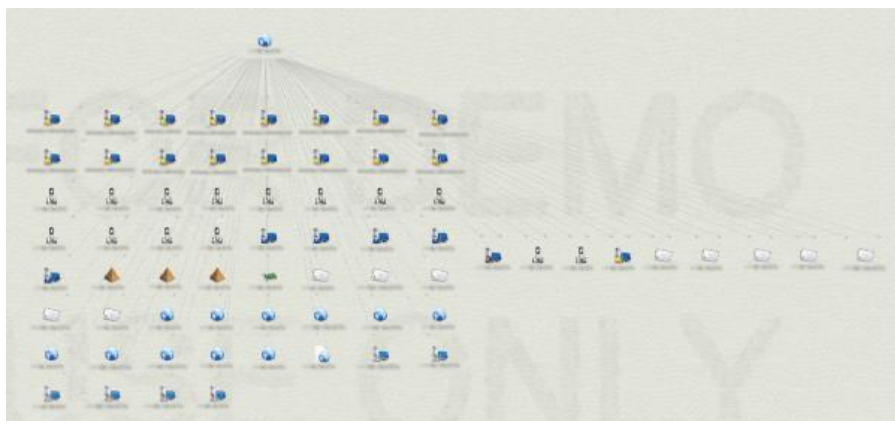

The Eye-opener

During my presentation last week, I was fortunate enough to have a few C-level executives in the audience. This is always great because I get to show them first hand how easily they can become a target of a phishing email or another social-engineering attack. I started off my presentation with infrastructural reconnaissance, which focuses on gathering information on an organization such as email addresses, DNS records, IP addresses, MX servers, files, and anything else that would be useful to an attacker. Infrastructural recon differs from personal reconnaissance in that personal recon is exactly what it sounds like: gathering info on a person or individual. The two types of recon are all part of the overall objective anyway, especially if you plan to use a social-engineering attack. Before my presentation, I received permission from the executives to use them and the company as the target for my demo. The demo was split into two parts: Part 1 illustrating how much material on them and the company I could uncover using only their domain name. Part 2 was me using the results from Part 1 to obtain additional info that could be used in any number of subsequent attacks.

Part 1

I used [Maltego](#) to search for the domain. In under a minute the canvas was filled with a striking display of DNS names, domains, MX Records, IP addresses, phone numbers, URLs, email addresses, first and last names, NS Records, locations, documents, and social media affiliations. It's worth mentioning that since Maltego aggregates data from across the Internet and identifies everything that your search term is related to, many results can and will be irrelevant. For example, since this particular company also hosts a blog, there were many email addresses and names associated with user comments on the company blog, which weren't helpful in my objective. Nonetheless, Maltego, as *The Ethical Hacker Network* describes it, is: "an open source intelligence and forensics application that allows for the mining and gathering of information as well as the representation of this information in a meaningful way. Coupled with its graphing libraries, Maltego, allows you to identify key relationships between information and identify previously unknown relationships between them."

After completing the search using Maltego, I started explaining the results to the audience and zeroed in on one of the several email addresses returned. The email address I chose just happened to belong to an exec sitting in the front row. Now that I had his email address, as well as the naming convention used for their email (e.g., `firstname_lastname@company.com` or `lastname@company.com`), and I had the actual email server, I was more than halfway there. I next logged into LinkedIn using an unassuming account I already created specifically for this type of work and searched for the company. As expected, the LinkedIn search returned a list of people identifying themselves as employees of this company. In that list was a familiar name, it was the same executive and now I had his full name, title, complete description of his position, and a list of his coworkers and information about their positions. Since I only had an hour, I stopped Part 1 and explained how the rest of the process might play out in a real-world malicious scenario with an attacker using this information for a phishing email.

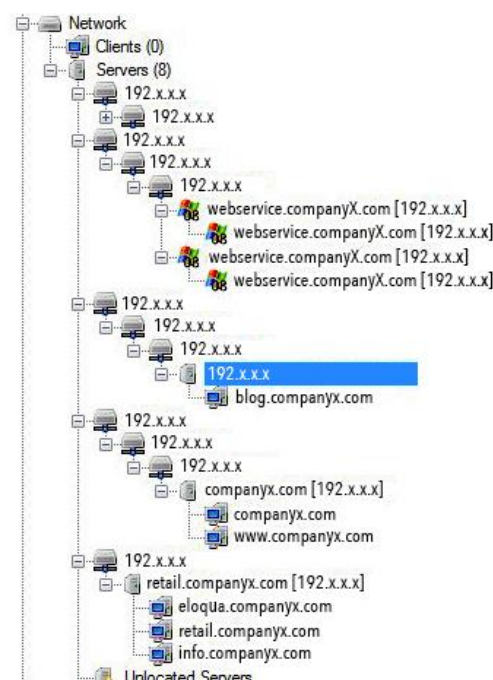

Part 2

The second part of the demo consisted of me taking a lot of the data I obtained in Part 1 (IP address, domain names, etc.) and enumerating the network. For this I used FOCA 3.2, a free fingerprinting and information-gathering tool that can search for servers, domains, URLs and public documents and which outputs everything into a network tree. Another useful feature of FOCA is it searches for data leaks such as metadata, directory listing, unsecure HTTP methods, robot.txt files, detection and processing of svn repositories, and much more. I think this part of my demo was even more eye-opening because it showed the audience that several of their assets were exposed. Within three minutes I managed to obtain a comprehensive listing of their systems complete with IP net blocks, DNS servers, exchanges server, webmail, Microsoft Lync server, customer-facing portals, and a lot more.

The End

I barely scratched the surface in this OSINT presentation, but in less than 20 minutes I was able to gather enough information for a mass spear-phishing attack or network intrusion. Along the way I also uncovered information that, although not applicable to this particular objective, could have been useful had I decided to use another attack vector as a way in. For example, I uncovered information about the

company's customers, business partners, email communications between employees and prospects, as well as vendors they used.

Like many things, these tools and techniques can be used for good or evil. Unfortunately, most of the time, OSINT is used for malicious behavior. However, as security professionals we can leverage the same TTPs as the bad guys to identify weaknesses before someone exploits them. OSINT can also be very useful for IR and forensics consultants, especially when investigating advanced threats. Having information on the attacker, such as an IP address, C2 servers, moniker, etc., I can then leverage it to my advantage in gathering additional info during forensics. Just like we tell our customers "there is no one right or all-encompassing security solution, but rather a security stack." Think of OSINT as just another layer in your overall security stack. <https://blog.bit9.com/2013/04/15/osint-tools-the-foundation-for-social-engineering-and-phishing-attacks/>

Tactical and Strategic Intelligence

Tactical Intelligence - Intelligence that is required for the planning and conduct of tactical operations. This is in line with military operations being conducted on the battlefield, generally in direct contact with the enemy, the commander's timeframe is very much compressed, and he is dealing with towns, villages, or local tribes. The commander is troubled that an insurgent force may be just over the next hill or hiding in a building waiting to ambush his forces. He is operating in the here-and-now-in-your-face cultural environment. There is no room for error!

Strategic Intelligence - Intelligence that is required for forming policy and military plans at national and international levels. This is in line with more of an expanded timeframe and takes into consideration entire countries. The intelligence analysis may run months or years into the future. During this period, errors, which are not acceptable but do still occur, are not as critical as they are at the tactical level where life and death are daily concerns. Errors at this level can be corrected with the luxury of more room for maneuver.

Components of Strategic Intelligence

The same analytical process that takes place at the strategic level can be applied at the tactical level. The tactical commander is faced with the same issues albeit at a smaller scale. Policy makers at national level worry about Iranian and North Korean WMDs but the ground commander also worries about insurgent WTDs (weapons of troop destruction) that include but are not limited to RPGs, AKs, IEDs, suicide bombers, etc. Strategic intelligence and tactical intelligence differ primarily in level of application but may also vary in terms and scope of detail.

Information gathered as strategic intelligence may be categorized into eight components. An easy way to remember these components is through the use of the acronym **BEST MAPS**:

Components of Strategic Intelligence

- Biographic
- Economic
- Sociologic
- Transportation And Communications
- Military Geography
- Armed Forces
- Political
- Scientific And Technical

Each of these components can further be divided into a number of subcomponents. These components and subcomponents are not all-encompassing nor mutually exclusive. This approach is merely a means to enhance familiarization with the types of information included in strategic intelligence.

Biographic Intelligence:

The study of individuals of actual or potential importance, their background and personalities.

- Educational And Occupational History
- Individual Accomplishments
- Idiosyncrasies And Habits
- Position, Influence, And Potential
- Attitudes And Hobbies

Economic Intelligence:

The science of production, distribution, and use of wealth-- the material means of satisfying human desires. economic intelligence is intelligence which deals with the extent and utilization of the natural and human resources and the economic potential of nations.

- Economic Warfare
- Economic Vulnerability
- Manufacturing
- Sources Of Economic Capability

Sociological Intelligence:

The study of society, as well as the groups within society, their composition, organization, purposes and habits, and the role of the individual in relation to social institutions.

- Population, Manpower And Labor
- Cultural, Physical Characteristics Of People
- Public Opinion
- Education
- Religion
- Public Health And Welfare

Transportation and Telecommunications Intelligence:

Transportation Intelligence:

Concerned with the operation and facilities of transportation systems in foreign countries.

Telecommunications Intelligence:

Concerned with the operation and facilities of civil and fixed military communications systems in foreign countries.

Transportation

- Railways
- Highways
- Inland Waterways
- Petroleum Pipelines
- Ports
- Merchant Marine
- Aviation

Telecommunications

- Radio
- Television
- Telephone
- Telegraph
- Submarine Cable
- Related Comms
- Media

Military Geography:

Geography is the science of the description of the land, sea and air, and the distribution of plant and animal life, including man and his industries.

Military geographical intelligence is the military evaluation of all geographical factors which may in any way influence military operations.

- Description
- Natural Features

- Manmade Features
- Sub-Component Name
- Physical Geography
- Human And Cultural Geography

Armed Forces Intelligence:

Is the integrated study of the organized land, sea, and air forces, both actual and potential, of foreign nations.

Strategy: Strategic military problems of the nation in light of position, terrain, economic, political, and other factors.

Tactics: Employment of weapons, employment and operations of the various arms and services, special operations training.

Category: Order of battle - equipment - logistics - organization/administration - military manpower

Political Intelligence:

Political intelligence is intelligence concerning foreign and domestic policies of governments and the activities of political movements.

- Basic Principles Of Government/National Policies
- Government Structure
- Foreign Policy
- Political Organizations And Parties
- Pressure Groups
- Electoral Procedures
- Public Order And Safety
- Subversion
- Intelligence And Security Organization
- Propaganda

Scientific And Technical Intelligence:

Is the study and evaluation of a foreign countries scientific and technical capability and potential to supports its objective through the development of new weapons and new equipment.

- New Weapons And Equipment
- Missiles And Space
- Nuclear, Biological, And Chemical
- Basic And Applied Science

Overt Collection Responsibilities:

- Dept. Of State: Political, Sociological, Economic, Scientific And Technical.
- Dept. Of Defense: Military intelligence information (also scientific/technical and economic pertinent to DoD missions.
- CIA: Exploitation of domestic sources of foreign intelligence; monitoring of foreign radio broadcasts

THE INTELLIGENCE COMMUNITY

MISSION AND AUTHORITIES OF THE DIRECTOR OF NATIONAL INTELLIGENCE (DNI)

The Director of National Intelligence (DNI) serves as the head of the Intelligence Community (IC), overseeing and directing the implementation of the National Intelligence Program (NIP) and acting as the principal advisor to the President, the National Security Council, and the Homeland Security Council for intelligence matters. Working together with the Principal Deputy DNI (PDDNI) and with the assistance of Mission Managers and four Deputy Directors, the Office of the Director of National Intelligence's goal is to protect and defend American lives and interests through effective intelligence.

THE INTELLIGENCE CYCLE

Equally important to the components of strategic intelligence is an awareness of the strategic intelligence cycle and the debriefer's role within that cycle. The first step is the identification of intelligence gaps. Analysts translate these gaps into intelligence requirements - the second step. In the third step, the strategic debriefer fulfills those requirements. The fourth step involves preparation of an intelligence report. The fifth and last step is the preparation of an intelligence report evaluation by the originator of the requirement. These evaluations measure the quality of the information as well as the quality of the report writing.

The Intelligence Cycle is the process of developing raw information into finished intelligence for policymakers to use in decisionmaking and action. There are five steps which constitute the Intelligence Cycle.

1. Planning and Direction

... is management of the entire effort, from identifying the need for data to delivering an intelligence product to a consumer. It is the beginning and the end of the cycle—the beginning because it involves drawing up specific collection requirements and the end because finished intelligence, which supports policy decisions, generates new requirements.

The whole process depends on guidance from public officials. Policymakers—the President, his aides, the National Security Council, and other major departments and agencies of government—initiate requests for intelligence.

2. Collection

... is the gathering of the raw information needed to produce finished intelligence. There are many sources of information, including open sources such as foreign broadcasts, newspapers, periodicals, and books. Open source reporting is integral to CIA's analytical capabilities. There are also secret sources of information. CIA operations officers collect such information from agents abroad and from defectors who provide information obtainable in no other way.

Finally, technical collection—electronics and satellite photography—plays an indispensable role in modern intelligence, such as monitoring arms control agreements and providing direct support to military forces.

3. Processing

... involves converting the vast amount of information collected to a form usable by analysts. This is done through a variety of methods including decryption, language translations, and data reduction.

4. All-Source Analysis and Production

... is the conversion of basic information into finished intelligence. It includes integrating, evaluating, and analyzing all available data—which is often fragmented and even contradictory—and preparing intelligence products. Analysts, who are subject-matter specialists, consider the information's reliability, validity, and relevance. They integrate data into a coherent whole, put the evaluated information in context, and produce finished intelligence that includes assessments of events and judgments about the implications of the information for the United States.

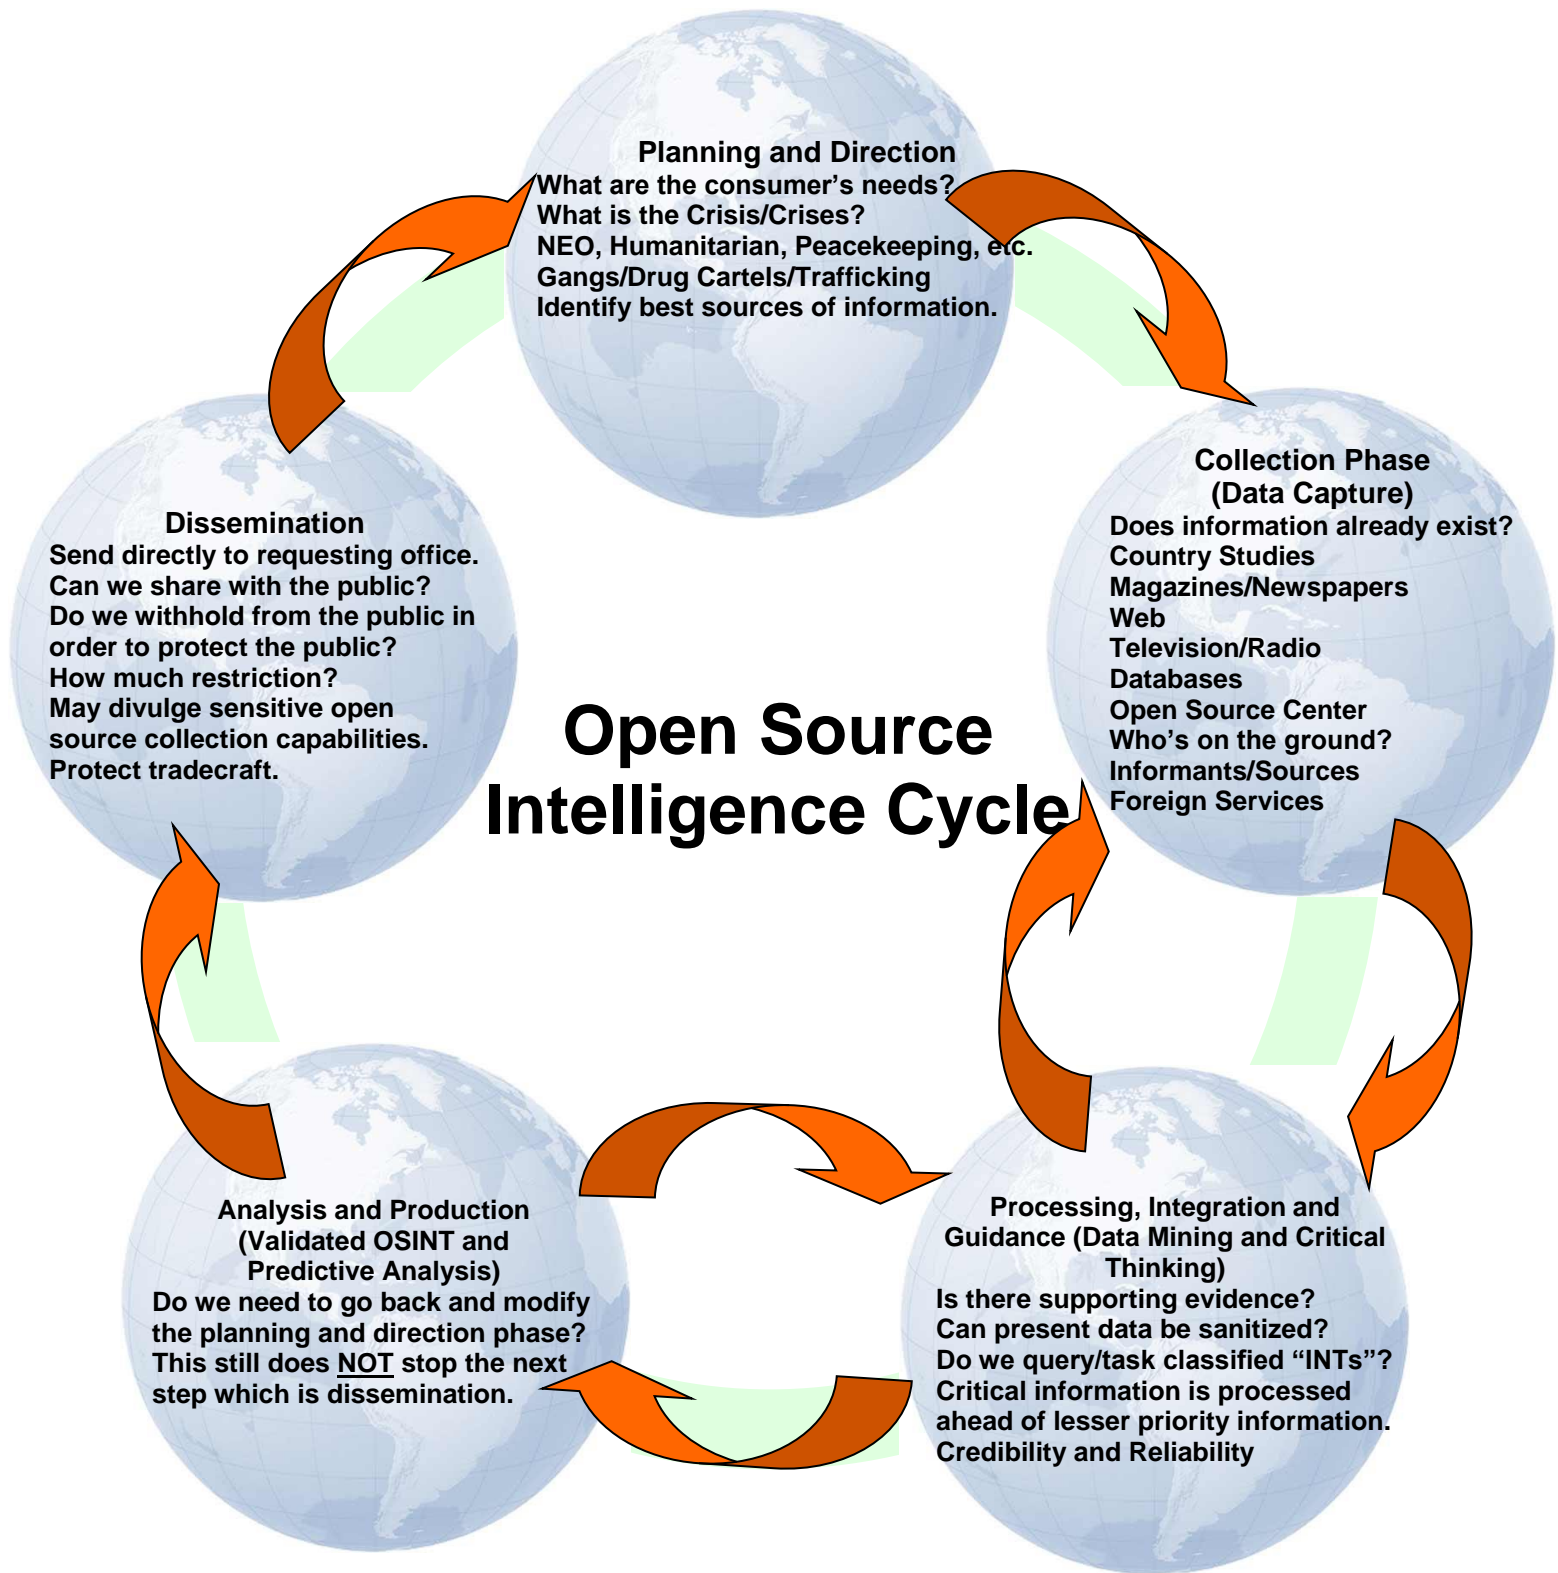

The CIA devotes the bulk of its resources to providing strategic intelligence to policymakers. It performs this important function by monitoring events, warning decisionmakers about threats to the United States, and forecasting developments. The subjects involved may concern different regions, problems, or personalities in various contexts—political, geographic, economic, military, scientific, or biographic. Current events, capabilities, and future trends are examined.

The CIA produces numerous written reports, which may be brief—one page or less—or lengthy studies. They may involve current intelligence, which is of immediate importance, or long-range assessments. The Agency presents some finished intelligence in oral briefings. The CIA also participates in the drafting and production of National Intelligence Estimates, which reflect the collective judgments of the Intelligence Community.

5. Dissemination

The last step, which logically feeds into the first, is the distribution of the finished intelligence to the consumers, the same policymakers whose needs initiated the intelligence requirements. Finished intelligence is provided daily to the President and key national security advisers. The policymakers, the recipients of finished intelligence, then make decisions based on the information, and these decisions may lead to the levying of more requirements, thus triggering the Intelligence Cycle.

MiningThe Internet For Intelligence

Internet 2012 in numbers. Source: <http://royal.pingdom.com/2013/01/16/internet-2012-in-numbers/>

There is so much happening on the Internet during a year that it's impossible to capture it all in a blog post, but we're going to give it a shot anyway. How many emails were sent during 2012? How many domains are there? What's the most popular web browser? How many Internet users are there? These are some of the questions we'll answer for you.

To bring you these answers, we've gone to the ends of the web – wherever that is – and back again, and compiled a list of truly fascinating facts about the year that was. Some of the numbers are snapshots taken during the year, others cover the entire period. Either way, they all contribute to giving us a better understanding of Internet in 2012. Enjoy!

Email

- **2.2 billion** – Number of email users worldwide.
- **144 billion** – Total email traffic per day worldwide.
- **61%** – Share of emails that were considered non-essential.
- **4.3 billion** – Number of email clients worldwide in 2012.
- **35.6%** – Usage share of the most popular email client, which was Mail for iOS.
- **425 million** – Number of active Gmail users globally, making it the leading email provider worldwide.
- **68.8%** – Percentage of all email traffic that was spam.
- **50.76%** – Percentage of all spam that was about pharmaceuticals, the top category of all spam.
- **0.22%** – Share of worldwide emails that comprised some form of phishing attack.

Web pages, Websites, and Web hosting

- 634 million – **Number of websites (December).**
- 51 million – **Number of websites added during the year.**
- 43% – **Share of the top 1 million websites that are hosted in the U.S.**
- 48% – **Share of the the top 100 blogs that run WordPress.**
- 75% – **Share of the top 10,000 websites that are served by open source software.**
- 87.8 million – **Number of Tumblr blogs.**
- 17.8 billion – **Number of page views for Tumblr.**
- 59.4 million – **Number of WordPress sites around the world.**
- 3.5 billion – **Number of webpages run by WordPress viewed each month.**
- 37 billion – **Number of pageviews for Reddit.com in 2012.**
- 35% – **The average web page became this much larger during 2012.**
- 4% – **The average web page became this much slower to load during 2012.**
- **191 million** – Number of visitors to Google Sites, the number 1 web property in the U.S. in November.

Web Servers

- **-6.7%** – Decline in the number of Apache websites in 2012.
- **32.4%** – Growth in the number of IIS websites in 2012.
- **36.4%** – Growth in the number of NGINX websites in 2012.
- **15.9%** – Growth in the number of Google websites in 2012.

Domain Names

- 246 million – **Number of domain name registrations across all top-level domains.**
- 104.9 million – **Number of country code top-level domain name registrations.**
- 329 – **Number of top level domains.**
- 100 million – **Number of .com domain names at the end of 2012.**

- 14.1 million – **Number of .net domain names at the end of 2012.**
- 9.7 million – **Number of .org domain names at the end of 2012.**
- 6.7 million – **Number of .info domain names at the end of 2012.**
- 2.2 million – **Number of .biz domain names at the end of 2012.**
- 32.44% – **Market share for GoDaddy.com, the biggest domain name registrar in the world.**
- \$2.45 million – **The price for Investing.com, the most expensive domain name sold in 2012.**

Internet Users

- 2.4 billion – **Number of Internet users worldwide.**
- 1.1 billion – **Number of Internet users in Asia.**
- 519 million – **Number of Internet users in Europe.**
- 274 million – **Number of Internet users in North America.**
- 255 million – **Number of Internet users in Latin America / Caribbean.**
- 167 million – **Number of Internet users in Africa.**
- 90 million – **Number of Internet users in the Middle East.**
- 24.3 million – **Number of Internet users in Oceania / Australia.**
- 565 million – **Number of Internet users in China, more than any other country in the world.**
- 42.1% – **Internet penetration in China.**

Social Media

- **85,962** – Number of monthly posts by Facebook Pages in Brazil, making it the most active country on Facebook.
- **1 billion** – Number of monthly active users on Facebook, passed in October.
- **47%** – Percentage of Facebook users that are female.
- **40.5 years** – Average age of a Facebook user.
- **2.7 billion** – Number of likes on Facebook every day.
- **24.3%** – Share of the top 10,000 websites that have Facebook integration.
- **200 million** – Monthly active users on Twitter, passed in December.
- **819,000+** – Number of retweets of Barack Obama's tweet "Four more years", the most retweets ever.
- **327,452** – Number of tweets per minute when Barack Obama was re-elected, the most ever.
- **729,571** – Number of messages per minute when the Chinese microblogging service Sina Weibo saw 2012 finish and 2013 start.
- **9.66 million** – Number of tweets during the opening ceremony of the London 2012 olympics.
- **175 million** – Average number of tweets sent every day throughout 2012.
- **37.3 years** – Average age of a Twitter user.
- **307** – Number of tweets by the average Twitter user.
- **51** – Average number of followers per Twitter user.
- **163 billion** – the number of tweets since Twitter started, passed in July.
- **123** – Number of heads of state that have a Twitter account.
- **187 million** – Number of members on LinkedIn (September).
- **44.2 years** – Average age of a LinkedIn user.
- **135 million** – Number of monthly active users on Google+.
- **5 billion** – How many times per day the +1 button on Google+ is used.
- **20.8%** – Usage share of HootSuite as a social media management tool among the world's top 100 brands.

Web Browsers (see <http://royal.pingdom.com/2013/01/16/internet-2012-in-numbers/>)

Search

- 1.2 trillion – **Number of searches on Google in 2012.**
- 67% – **Google's market-leading share of the U.S. search market (December).**

- **1 – The top trending question of the year on Ask.com: “Will Rob and Kristen get back together?”**

Mobile

- **1.1 billion** – Number of global smartphone subscribers.
- **6.7 billion** – Number of mobile subscriptions.
- **5 billion** – Number of mobile phone users.
- **5.3 billion** – Number of mobile handsets.
- **1.3 billion** – Number of smartphones in use worldwide by end of 2012.
- **465 million** – Number of Android smartphones sold in 2012, a 66% market share.
- **31%** – Percentage of the U.S. Internet population that used a tablet or e-reader.
- **13%** – Mobile share of global Internet traffic.
- **5 billion** – Number of mobile broadband subscriptions.
- **1.3 exabytes** – Estimated global mobile data traffic per month in 2012.
- **59%** – Share of global mobile data traffic that was video.
- **500 megabytes** – Amount of monthly data traffic consumed by the average smartphone.
- **504 kbps** – The average mobile network connection speed globally (all handsets).
- **1,820 kbps** – The average mobile network connection speed globally (smartphones).

Video

- **14 million** – Number of Vimeo users.
- **200 petabytes** – Amount of video played on Vimeo during 2012.
- **150,648,303** – Number of unique visitors for video to Google Sites, the number one video property (September).
- **1 billion** – PSY’s Gangnam Style video became the first online video to reach 1 billion views (currently just over 1.1 billion) and it achieved it in just 5 months.
- **2.7 billion** – Number of views of videos uploaded to YouTube tagged Obama or Romney during the 2012 U.S. election cycle
- **2.5 million** – Number of hours of news-related video that was uploaded to YouTube.
- **8 million** – The number of concurrent viewers of the livestream of Felix Baumgartner’s jump from the edge of space, the most ever on YouTube.
- **4 billion** – Number of hours of video we watched on YouTube per month.
- **60 million** – Number of global viewers monthly on Ustream.
- **16.8 million** – Number of total viewers in a 24 hour period for a video on Ustream, the most ever.
- **181.7 million** – Number of total unique viewers of online video in the U.S. during December.

Images

- 7 petabytes – **How much photo content Facebook added every month.**
- 300 million – **Number of new photos added every day to Facebook.**
- 5 billion – **The total number of photos uploaded to Instagram since its start, reached in September 2012.**
- 58 – **Number of photos uploaded every second to Instagram.**
- 1 – **Apple iPhone 4S was the most popular camera on Flickr.**

What about the internet in 2013?

Just a couple of weeks into 2013 we don’t yet know much about what the year ahead has in store for us. However, we can perhaps make a few predictions: we will be accessing the Internet more with mobile devices, social media will play an increasingly important role in our lives, and we’ll rely even more on the Internet both privately as well as professionally.

How Much Data is on the Internet and Generated Online Every Minute?

Source: <http://removeandreplace.com/2013/03/13/how-much-data-is-on-the-internet-and-generated-online-every-minute/>

Have you ever wondered how many bytes of data are created everyday online?

In the last twenty years, internet access has increased across the globe causing a boom in the amount of data being produced and collected.

Here are some facts about data on the internet.

There are 277,000 Tweets every minute, Google processes over 2 million search queries every minute, 72 hours of new video are uploaded to YouTube every minute, More than 100 million emails are sent every minute, Facebook processes 350 GB of data every minute and 571 new websites are created every minute.

Megabytes, Gigabytes, Terabytes... What Are They?

These terms are usually used in the world of computing to describe disk space, or data storage space, and system memory. For instance, just a few years ago we were describing hard drive space using the term Megabytes. Today, Gigabytes is the most common term being used to describe the size of a hard drive. In the not so distant future, Terabyte will be a common term. But what are they? This is where it gets quite confusing because there are at least three accepted definitions of each term.

According to the IBM Dictionary of computing, when used to describe disk storage capacity, a megabyte is 1,000,000 bytes in decimal notation. But when the term megabyte is used for real and virtual storage, and channel volume, 2 to the 20th power or 1,048,576 bytes is the appropriate notation. According to the Microsoft Press Computer Dictionary, a megabyte means either 1,000,000 bytes or 1,048,576 bytes. According to Eric S. Raymond in The New Hacker's Dictionary, a megabyte is always 1,048,576 bytes on the argument that bytes should naturally be computed in powers of two. So which definition do most people conform to?

When referring to a megabyte for disk storage, the hard drive manufacturers use the standard that a megabyte is 1,000,000 bytes. This means that when you buy an 80 Gigabyte Hard drive you will get a total of 80,000,000,000 bytes of available storage. This is where it gets confusing because Windows uses the 1,048,576 byte rule so when you look at the Windows drive properties an 80 Gigabyte drive will report a capacity of 74.56 Gigabytes and a 250 Gigabyte drive will only yield 232 Gigabytes of available storage space. Anybody confused yet? With three accepted definitions, there will always be some confusion so I will try to simplify the definitions a little.

The 1000 can be replaced with 1024 and still be correct using the other acceptable standards. Both of these standards are correct depending on what type of storage you are referring.

Processor or Virtual Storage

- 1 Bit = Binary Digit
- 8 Bits = 1 Byte
- 1024 Bytes = 1 Kilobyte
- 1024 Kilobytes = 1 Megabyte
- 1024 Megabytes = 1 Gigabyte
- 1024 Gigabytes = 1 Terabyte
- 1024 Terabytes = 1 Petabyte
- 1024 Petabytes = 1 Exabyte
- 1024 Exabytes = 1 Zettabyte
- 1024 Zettabytes = 1 Yottabyte
- 1024 Yottabytes = 1 Brontobyte
- 1024 Brontobytes = 1 Geopbyte

Disk Storage

- 1 Bit = Binary Digit
- 8 Bits = 1 Byte
- 1000 Bytes = 1 Kilobyte
- 1000 Kilobytes = 1 Megabyte
- 1000 Megabytes = 1 Gigabyte
- 1000 Gigabytes = 1 Terabyte
- 1000 Terabytes = 1 Petabyte
- 1000 Petabytes = 1 Exabyte
- 1000 Exabytes = 1 Zettabyte
- 1000 Zettabytes = 1 Yottabyte
- 1000 Yottabytes = 1 Brontobyte
- 1000 Brontobytes = 1 Geopbyte

This is based on the IBM Dictionary of computing method to describe disk storage - the simplest.

Source: <http://www.whatsabyte.com/>

Now let's go into a little more detail.

Bit: A Bit is the smallest unit of data that a computer uses. It can be used to represent two states of information, such as Yes or No.

Byte: A Byte is equal to 8 Bits. A Byte can represent 256 states of information, for example, numbers or a combination of numbers and letters. 1 Byte could be equal to one character. 10 Bytes could be equal to a word. 100 Bytes would equal an average sentence.

Kilobyte: A Kilobyte is approximately 1,000 Bytes, actually 1,024 Bytes depending on which definition is used. 1 Kilobyte would be equal to this paragraph you are reading, whereas 100 Kilobytes would equal an entire page.

Megabyte: A Megabyte is approximately 1,000 Kilobytes. In the early days of computing, a Megabyte was considered to be a large amount of data. These days with a 500 Gigabyte hard drive on a computer being common, a Megabyte doesn't seem like much anymore. One of those old 3-1/2 inch floppy disks can hold 1.44 Megabytes or the equivalent of a small book. 100 Megabytes might hold a couple volumes of Encyclopedias. 600 Megabytes is about the amount of data that will fit on a CD-ROM disk.

Gigabyte: A Gigabyte is approximately 1,000 Megabytes. A Gigabyte is still a very common term used these days when referring to disk space or drive storage. 1 Gigabyte of data is almost twice the amount of data that a CD-ROM can hold. But it's about one thousand times the capacity of a 3-1/2 floppy disk. 1 Gigabyte could hold the contents of about 10 yards of books on a shelf. 100 Gigabytes could hold the entire library floor of academic journals.

Terabyte: A Terabyte is approximately one trillion bytes, or 1,000 Gigabytes. There was a time that I never thought I would see a 1 Terabyte hard drive, now one and two terabyte drives are the normal specs for many new computers. To put it in some perspective, a Terabyte could hold about 3.6 million 300 Kilobyte images or maybe about 300 hours of good quality video. A Terabyte could hold 1,000 copies of the Encyclopedia Britannica. Ten Terabytes could hold the printed collection of the Library of Congress. That's a lot of data.

Petabyte: A Petabyte is approximately 1,000 Terabytes or one million Gigabytes. It's hard to visualize what a Petabyte could hold. 1 Petabyte could hold approximately 20 million 4-door filing cabinets full of text. It could hold 500 billion pages of standard printed text. It would take about 500 million floppy disks to store the same amount of data.

Exabyte: An Exabyte is approximately 1,000 Petabytes. Another way to look at it is that an Exabyte is approximately one quintillion bytes or one billion Gigabytes. There is not much to compare an Exabyte to. It has been said that 5 Exabytes would be equal to all of the words ever spoken by mankind.

Zettabyte: A Zettabyte is approximately 1,000 Exabytes. There is nothing to compare a Zettabyte to but to say that it would take a whole lot of ones and zeroes to fill it up.

Yottabyte: A Yottabyte is approximately 1,000 Zettabytes. It would take approximately 11 trillion years to download a Yottabyte file from the Internet using high-power broadband. You can compare it to the World Wide Web as the entire Internet almost takes up about a Yottabyte.

Brontobyte: A Brontobyte is (you guessed it) approximately 1,000 Yottabytes. The only thing there is to say about a Brontobyte is that it is a 1 followed by 27 zeroes!

Geopbyte: A Geopbyte is about 1000 Brontobytes! Not sure why this term was created. I'm doubting that anyone alive today will ever see a Geopbyte hard drive. One way of looking at a geopbyte is 15267 6504600 2283229 4012496 7031205 376 bytes!

Now you should have a good understanding of megabytes, gigabytes, terabytes and everything in between. Now if we can just figure out what a WhatsAByte is.....:)

The byte converter <http://www.whatsabyte.com/P1/byteconverter.htm>

DATA IS ABUNDANT, INFORMATION IS USEFUL, KNOWLEDGE IS PRECIOUS.

Data. – Data is raw and it's abundant. It simply exists and has no significance beyond its existence . It can exist in any form, usable or not. It does not have meaning of itself. Collecting users activity log will produces data.

Information. – Information is data that has been given meaning by way of relational connection.

Knowledge. - Knowledge is the appropriate collection of information, such that its intent is to be useful.

Internet users are generating petabytes of data every day. Millions of users access billions of web pages every millisecond, creating hundreds of server logs with every keystroke and mouse click. Having only user log data is not useful. To give better service to user and generate money for business it is required to process raw data and collect information which can be used for providing knowledge to users and advertisers. **Source:** <http://www.whatsabyte.com/>

Based on these figures, I opine that intelligence exists out there just waiting to be tapped. Oh, come on now, you do have search engines to help research that data; it's only 8 zetabytes! Lots of data but guess what, even Google which is considered currently the best search engine, has only indexed about 170 terabytes. Now you know why I recommend using more than one search engine with good keywords to assist.

Key Army Access Sites

NOTE: Several links require password access.

To access Intelink or to apply for a remote access account, go to <https://www.intelink.gov>

The good thing about Intelink is that you can apply for a non-attributable so that very little electronic footprints are left behind.

US Army Intelligence Center Mission:

The United States Army Intelligence Center's mission is Leading, Training, Equipping and Supporting the world's premier corps of Military Intelligence Professionals who are imbued with a warrior spirit, self-discipline and mutual respect.

The 304th Military Intelligence Battalion's Mission:

<https://www.ikn.army.mil/apps/iknwms/default.aspx?webId=2166>

The 304th Military Intelligence Battalion's Mission The 304th Military Intelligence Battalion conducts Soldier and Leader training; instilling the Tenets of Leadership, a Warrior Ethos, and the Army Values in order to produce MI professionals who can conduct and lead Military Intelligence operations in an Army or Joint-Interagency-Intergovernmental-Multinational (JIIM) environment. 304th MI BN - Leaders of the Corps! The 304th Military Intelligence Battalion is

located in Fort Huachuca, Arizona and is a subordinate unit of the 111th Military Intelligence Brigade.

Intelligence Knowledge Network (IKN):

<https://www.ikn.army.mil/>

IKN is a Knowledge Management tool and dynamic portal that enables Intelligence Soldiers all over the world to communicate, collaborate and investigate. IKN serves as the Intelligence Warfighter Forum and hosts discussion forums, a single point of entry to access Intelligence Community websites, and provides a variety of public and private web applications that support the Intelligence Community and the Warfighter.

The Global Terrorism Database (GTD) is an open-source database including information on terrorist events around the world since 1970 (currently updated through 2004). Unlike many other event databases, the GTD includes systematic data on international as well as domestic terrorist incidents that have occurred during this time period and now includes almost 80,000 cases. For each GTD incident, information is available on the date and location of the incident, the weapons used and nature of the target, the number of casualties, and -- when identifiable -- the identity of the perpetrator.

Aviation

Airport & Aviation Security

<http://www.ict.org.il/Articles/tabid/66/Articlsid/1105/currentpage/1/Default.aspx>

Track Planes in Real-Time with Google Maps (we just continue to make it easier for terrorists like Al Qaeda to shoot down an aircraft. Aircraft and airports are very secure and getting inside poses a high degree of risk, however, shooting down an aircraft away from the terminal would make a statement that aviation still is not that safe.)

BLOGS

By David F. Carr DOD: Be wary of social media's 'loose lips'

In an earlier era, “loose lips sink ships” was the military’s warning not to let even small details about military movements and operations slip in casual conversation. In contrast, social media Web sites today thrive on loose lips, making it even tougher to maintain operational security. Even the smallest details shared on social media sites can play a role in security breaches.

WASHINGTON — Everyone from troops in the field to the highest brass and civilian leaders will be allowed to Twitter, blog and use Facebook and other social networking sites on the military's non-classified computer network, the Pentagon has announced.

The new policy follows a seven-month review in which the Defense Department weighed the threats and benefits of allowing the wide use of emerging Internet capabilities. It essentially seeks to manage the risks while acknowledging the Internet is proving a powerful tool for a myriad of tasks including recruiting, public relations, collaboration with a wide range of people and for communications between troops and their families.

To guard security, it allows commanders to cut off access – on a temporary basis only – if that's required to safeguard a mission or reserve bandwidth for official use. The new directive also makes practices uniform across the entire department, in which different commands previously blocked certain things while others didn't. Visiting sites for pornography, gambling or hate-crime activities is still prohibited on military computers.

"We need to take advantage of these capabilities that are out there – this Web 2.0 phenomena," said David M. Wennergren, deputy assistant secretary of defense for information technology. "The idea is be responsible and use these tools to help get the job done."

The new directive means that YouTube, MySpace and more than a dozen sites blocked by the Pentagon in May 2007 will be unblocked, he said. The Pentagon said at the time that the use of video sites in particular was straining its network and using too much of its bandwidth. But Wennergren said Friday that the move failed to stem the use of bandwidth because people just went to alternate sites.

<http://www.fcw.com/Articles/2009/06/22/Operational-Security-Presentation.aspx>

BLOGS, like social sites, are good sources of information harvesting for intelligence purposes if you have the time and patience, especially the time. Good keyword searching will cut down on the time you spend on BLOGS if your only reason for being there is to harvest information. It is very easy to get distracted though with all the videos that appear daily and you have to be focused on the task. I think that too much information is being passed around. A good analyst, foreign or domestic, can put together enough information from BLOGS to build a good intelligence file. However, I realize that people are not going to shut them down and too many folks out there want access to them.

World Blogs (One of the Web's largest and most comprehensive directories of World Blogs, sorted by country and region.)

BLOGS, like social sites, are good sources of information harvesting for intelligence purposes if you have the time and patience, especially the time. Good keyword searching will cut down on the time you spend on BLOGS if your only reason for being there is to harvest information. It is very easy to get distracted though with all the videos that appear daily and you have to be focused on the task. Personally, I think that too much information is being passed around. A good analyst, foreign or domestic, can put together enough information from BLOGS to build a good intelligence file. However, I realize that people are not going to shut them down and too many folks out there want access to them. Be careful how you use them. Once you post information to a Blog it is basically there forever.

CAMS Around the World

(why would CAMS be included in this handout? Imagine being told you have to deploy to a certain country to conduct an operation. You are told the weather is 40 degrees with a heavy overcast and it is drizzling. You can only imagine an image of what it looks like. However, with a weather cam of the area the image is vivid and in real time. Most major cities around the world have cams showing certain parts of the city which can be very helpful when planning an operation. They can show areas to avoid and roads that support your equipment.)

Country Links/Studies

National Geospatial Intelligence Agency (Download Country Files) Complete Files of Geographic Names for Geopolitical Areas from GNS (ISO/IEC 10646 [Unicode UTF-8] Compliant as of 18 July 2002).

We provide complete files of geographic names information covering countries or geopolitical areas. The files are not in customary gazetteer format, but are in a special format amenable to input into geographic information systems, databases, and spreadsheets, giving end users powerful capabilities for data analysis, manipulation, and display. They are offered with both names formats provided within each of the files: Reading Order format (Mount Everest) that works well with mapping applications, and Reverse Generics format (Everest, Mount) that works well with gazetteer listings. Follow the links below to learn more and to begin downloading files. Database most recent update - July 01, 2013. <http://earth-info.nga.mil/gns/html/namefiles.htm>

NationMaster (Welcome to NationMaster, a massive central data source and a handy way to graphically compare nations. NationMaster is a vast compilation of data from such sources as the CIA World Factbook, UN, and OECD. You can generate maps and graphs on all kinds of statistics with ease.) We want to be the web's one-stop resource for country statistics on everything from soldiers to wall plug voltages.	http://www.nationmaster.com/index.php
StateMaster (A unique statistical database which allows you to research and compare a multitude of different data on US states. We have compiled information from various primary sources such as the US Census Bureau, the FBI, and the National Center for Educational Statistics. More than just a mere collection of various data, StateMaster goes beyond the numbers to provide you with visualization technology like pie charts, maps, graphs and scatterplots. We also have thousands of map and flag images, state profiles, and correlations.) We have stats on everything from toothless residents to percentage of carpoolers. Our database is increasing all the time, so be sure to check back with us regularly.	http://www.statemaster.com/index.php

Critical Thinking

This free web-based training is provided as an introduction to Anacapa's scheduled and on-site courses in **intelligence analysis**. Upon completion of all three training modules, you may obtain a certificate of completion. Click on a link below to go to each module.

<http://www.anacapatraining.com/company/index.html>

1. Introduction to Intelligence Analysis

(1 to 2 Hours)

2. Data Collection Tradeoffs

(2-3 Hours)

3. Critical Thinking Strategies

(2-3 Hours)

Essentials Of Critical Thinking

http://www.free-ed.net/free-ed/TextResources/critThink_01.asp

1. Critical Thinking Basics

[Topic Overview](#)

[What You Should Learn](#)

[Frequently Asked Questions](#)

[Tips on Applications](#)

Frontline: CyberWar (How real is the threat of war in cyberspace, and what does the White House know that the rest of us don't? FRONTLINE investigates a new war using embedded malicious code, probes and pings, and other weapons aimed directly at America's power grid, water supply, and transportation systems. Examples include The Slammer (Super Bowl Sunday), Nimda (a week after 9/11), Code Red (summer 2001), and Moonlight Maze (from Russia's Academy of Science). View the entire 52 minute program here in six consecutive chapters.)

Databases (Some Searchable) see also [The Deep Web](#)

I have yet to understand why researchers, even the serious types, tend to avoid databases. They would rather google all day long in the hopes that the sought information will magically appear, and sometimes it does I do have to admit but for the most part it is time not well spent especially if you know your subject and a database can return better results. (The majority of databases have their own internal search engines that will cut down on the time spent searching.) You also have to remember there is no such thing as the perfect search query for any of the search engines.

Wayback Machine (The Internet Archive is building a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public [works extremely well with URL addresses])

Department of Homeland Security

The Department of Homeland Security Open Source Enterprise (DHS-OSE) has just released two new daily Open Source products to the Homeland Security Central website on Intelink-U (<https://www.intelink.gov/hls>) and the Homeland Security Information Network-Intelligence (<https://hsin-intel.dhs.gov/>).

With the large success of the DHS Daily Cyber Report, the DHS-OSE has started reporting open source information on medical and health related hazards, as well as human smuggling and trafficking.

Respectively, these new open source products are titled: DHS Daily Infectious Diseases Report & DHS Daily Human Trafficking Report.

Listed below is a short description of each:

- The DHS Daily Infectious Diseases Report is collected each weekday as a summary of medical and health related hazards published from open-source information concerning the homeland.
- The DHS Daily Human Trafficking Report is collected each weekday as a summary of human smuggling/trafficking related open-source information.

Each of these new products along with the Daily Cyber Report are available for PDF download at the above secure web addresses and are available via unclassified e-mail subscription. There are also several other new open source reports to be released that focus on:

- Drug Trafficking,
- Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE),
- Illicit Commercial Trafficking, and
- Weapons Trafficking

These DHS-OSE open source products originate from Internet sources and open source information. They are unclassified products that can be widely distributed. Point of contact is Tom Link at thomas.link@dhs.gov or tom.link@ugov.gov

Drugs and Terrorism, Drug Cartels, And Criminal Organizations

New drug trafficking map in Mexico

The war that the government launched against drug trafficking and fights between criminal groups for the control of routes has caused splits and the emergence of new organizations. BBC Mundo relates who is who. In 2006, at the beginning of Felipe Calderon's administration, Mexico had four major cartels: the organizations of Sinaloa, Juarez, Gulf, and the Familia Michoacana. Now, the war launched by the government against drug trafficking and the fight between groups for the control of routes and markets has caused split and the emergence of new groups. According to specialist and authorities in Mexico there are currently at least seven large cartels and about 20 local bands and groups. Some have even been strengthened, such as the Sinaloa Cartel, which is considered by the US Government as one of the strongest in Latin America. Others developed an extremely violent characteristic, such as the organization of Los Zetas, founded by a group of former military elite troops, and groups such as the Tijuana Cartel or La Familia Michoacana almost disappeared. Unlike 2006, when drug trafficking was divided among several organizations, today two groups control 80% of the market: Sinaloa and Los Zetas, according to official information.

The drug trafficking map has changed in recent years, and according to experts, the scenario could change again after the death of Heriberto Lazcano Lazcano, "El Lazca," or "El Verdugo," who was killed during a clash with Navy troops. According to specialist George Grayson, the Sinaloa Federation led by Joaquin Guzman Loera, "El Chapo," could try to snatch the territory from Los Zetas. "The big winner is 'El Chapo,' whose primary goal will be to take Nuevo Laredo with the help of the Gulf Cartel, BBC World said. In the dispute for markets and drug trafficking routes, authorities and experts expect an increase in violence. BBC World presents you with the new map of drug trafficking in Mexico, a part of the war that has killed over 50,000 people over the last six years.

Sinaloa Federation

In 2006 this group was operating in five states. Now his area of influence extends to 16 of the 32 states in the country. The cartel led by Joaquin Guzman Loera, "El Chapo," and Ismael Zambada, "El Mayo," waged a bloody war against other organizations in order to control especially the border with the United States, which it achieved in 2010. The Sinaloa Federation displaced the Juarez Cartel, which controlled drug trafficking in Chihuahua and Durango in the northern part of the country and it had operational groups in Quintana Roo, in the southeast.

It also seized the territory of the Tijuana Cartel in Baja California, which had suffered significant damage to its structure following the death and capture of nearly all its founders, the Arellano Felix brothers. At the same time it established alliances with several groups such as the Knights Templar and the Gulf Cartel, and prompted the emergence of others such as the so-called Jalisco New Generation Cartel, which according to experts has become the armed wing of the Federation. But its activity is not

limited to Mexico and the United Nations Office on Drugs and Crime (UNODC) indicate that the Sinaloa organization maintains a presence in countries like Argentina, Ecuador, Peru, Panama, Costa Rica, and Guatemala. People tied to the Federation have also been found in Australia and Malaysia, as well as in other European countries. "El Chapo" Guzman, the visible leader of the cartel, is the most wanted criminals by the governments of Mexico and the United States, but that did not stop the Forbes magazine from including him in its list of the one thousand most richest and influential people in the world. The cartel is dedicated to the smuggling of heroin, marijuana, and cocaine, in addition to dominating the market for synthetic drugs, which are produced in clandestine laboratories which are mainly located in Nayarit, Jalisco, Michoacan, Colima, and Baja California. According to reports from the US Department of Justice, the Sinaloa Federation has an extensive distribution network in the country, covering at least 50 cities.

Current Leaders: Joaquin Guzman Loera, "El Chapo," Ismael Zambada Garcia, "El Mayo," Juan Jose Esparragoza Moreno, "El Azul,".

Arrested or killed: Ignacio Coronel, "El Nacho," killed during a clash with the Navy. Vicente Zambada Niebla, "El Vicentillo," arrested. Jesus Zambada Garcia, "El Rey," arrested. Martin Beltran Coronel, arrested. Teodoro GarciaSimentel, "El Teo," arrested.

Los Zetas

Six years ago, at the beginning of the war launched by the Mexican Government against drug trafficking, this group was the armed wing of the Gulf Cartel, with which it broke in 2010.

But even before their split, Los Zetas were already operating on their own. According to the Public Security Secretariat (SSP) and the US Drug Enforcement Agency, the organization established a network of drug suppliers from Central America to the northern Mexican border. The cartel virtually controls all coastal states in the country from Quintana Roo to Tamaulipas and Coahuila. Its influence includes countries like Guatemala, where the government of that country considers them the main threat to its national security, although there is also documentation on ties to the Italian mafia known as Ndrangheta. Los Zetas are not only involved in drug trafficking. According to Mexican authorities, the group controls a group involved in extortion and kidnapping, especially of undocumented migrants. It also protects or extorts gangs involved in piracy of music albums, videos or clothing. But its main trait is the extreme violence with which it operates. Experts agree that Los Zetas changed drug trafficking in Mexico, not only because of the cruel way in which they kill their rivals, but also because of the operational structure they deployed in its territory. A legacy of its past: The cartel was created with about thirty former military elite bodyguards, who were hired as personal bodyguards for the then leader of the Gulf Cartel, Osiel Cardenas Guillen. Now the group is composed of hundreds of cells, known as estacas, with 20 hitmen each. The groups are headed by a local leader, who in turn is led by a regional leader. The chain ends in the leader of the cartel, who was Heriberto Lazcano Lazcano, "El Lazca" or "The Executioner," who died during a clash with the Navy on 7 October.

He was the last former military from those who founded the organization. Experts such as George Grayson expect his successor to be Miguel Trevino Morales, "El Z-40," who was second in command. Analysts insist that the succession will not be easy, since for several months the organizations were experiencing an internal struggle that seems to be focused in the states of northeastern Mexico. So far it is not clear if the death of El Lazca will affect the operation of the cartel, or whether "El Z-40," will be able to take over without any problems. The specialist said that "He is ready to move forward with his interests with an unspeakable violence." However the Stratfor Consultant said that the death of "El Lazca" will not affect the cartel.

Current Leaders: Miguel Trevino Morales, "El Z40," • Eduardo Almanza Morales, and Octavio Almanza Morales.

Captured or Killed Leaders: Heriberto Lazcano Lazcano, "El Lazca", dead, Jaime Gonzalez Durán, "El Hummer," captured, Jesus Enrique Rejon Aguilar, "El Mamito," captured, Flavio Mendez Santiago, "El Amarillo," captured, Raul Lucio Hernández, "El Lucky," captured, Raymundo Almanza Morales, "El Gori," captured, Sigifredo Najera Talamantes, "El Canon," captured Sergio Pena Mendoza, "El Concord," captured, Ricardo Almanza Morales, "El Gori1," • dead, Salvador Alfonso Martinez Escobedo, "La Ardilla," captured, Omar Martin Estrada Luna, "El Kilo", captured.

Juarez Cartel

It used to be the strongest drug trafficking group in Mexico with presence in half of the country, but now its territory is limited to some town in Chihuahua, in the northern part of the country, and in Queretaro and Quintana Roo in the south. The Juarez Cartel, according to Stratfor consulting firm and the Federal Bureau of Investigations (FBI) of the United States lost the battle against the Sinaloa Federation, with which it was allied at one point. The group led by Joaquin Guzman Loera, "El Chapo," snatched control of virtually all of Chihuahua border region with the United States, one of the major sites for drug trafficking and also displace it in the stronghold in Sinaloa and Guerrero. The dispute over the territory was fought especially in Ciudad Juarez, which is considered the most violent people in Mexico and where 6,000 people died over a 2-year period. The Juarez cartel led by Vicente Carrillo Fuentes, "El Viceroy," established an alliance with the group of Los Zetas in order to defend themselves against their rivals, but was not able to retain its market. Now, it is engaged in the export of heroin, marijuana, cocaine, and synthetic drugs primarily through Ciudad Juarez, where it also controls a gang engaged in the extortion of merchants. At the beginning of 2012, Stratfor predicted the possible end of this organization, which was confirmed months later by one of its lieutenants, Guillermo Castillo Rubio, "El Pariente," who confessed that the cartel "was weakened."

Current Leaders: Vicente Carrillo Fuentes, "El Viceroy" Juan Pablo Ledesma, "El JL."

Arrested or killed leaders: Vicente Carrillo Leyva, captured, Elmy Hermosillo Trujillo, "El Potrillo," captured, Pedro Sanchez Arras, "El Tigre," captured Rogelio Segovia Hernández, "El Royser," captured, Luis Guillermo Castillo Rubio, "El Pariente," captured.

South Pacific Cartel: Until January 2008, this group, led by the Beltran Leyva brothers were part of the Sinaloa Federation.

But the alliance ended with the capture of Alfredo Beltran, "El Mochomo." The leaders of the group accused Joaquin Guzman Loera, "El Chapo," of tipping of authorities of "El Mochomo's" whereabouts. From that moment on began a dispute between the organizations that spanned several states in the country. In that battle the cartel allied with the group of Los Zetas and even sought the support of the Juarez Cartel. However, the death of its main leader, Arturo Beltran, "El Barbas," in December 2009, as well as the separation of various lieutenants weakened the position of the group. Currently the South Pacific Cartel maintains operation in Sinaloa and in some populations in Sonora in the northwest, as well as in Morelos and Guerrero south of the country. It also operates in and around Mexico City, the capital of the country, as documented by the Public Security Secretariat (SSP). One of the leaders of the organization, Jesus Radilla Hernandez, "El Negro," is accused by authorities of the murder of the son of the poet Javier Sicilia. The protest for the murder sparked the emergence of the Movement for Peace with Justice and Dignity, which has brought together hundreds of victims of violence from the war on drugs. One of the characteristics of the South Pacific Cartel is its ability to corrupt policemen and official, according to specialists and authorities. An example was the so-called Operation Clean Sweep, a joint investigation between Mexico and the United States to dismantle a network of bribes given by the Beltran Leyva brothers to senior officials of the Office of the Attorney General of the Republic and to employees of the US Embassy in Mexico. The South Pacific Cartel is mainly involved in the smuggling of cocaine, marijuana and heroin.

Current Leaders: Hector Beltran Leyva, "El H," Mario Alberto Beltran Leyva, Fausto Isidro Meza Flores, "El Chapo Isidro."

Captured or Killed Leaders: Arturo Beltran Leyva, "El Barbas," killed, Carlos Beltran Leyva, captured, Alfredo Beltran Leyva, "El Mochomo," captured, Sergio Villarreal, "El Grande," captured Oscar Garcia Montoya, "The Hand With Eyes," captured Edgar Valdez Villarreal, "La Barbie," captured Gerardo Alvarez Vazquez, "El Indio," captured, Jesus Radilla Hernandez, "El Negro," captured, Hector Huerta Rios, "La Burra," captured

Gulf Cartel

At the beginning of the current government in 2006, the Gulf Cartel was experiencing several problems. Its main leader, Osiel Cardenas Guillen, was in prison and it was quickly extradited to the United States. Although it formally kept its alliance with the group of Los Zetas, within the organization there were quarrels and divisions, as documented by the Public Security Secretary (SSP). In 2010 the group of former soldiers completely separated from the cartel and from that moment on the cartel began to lose its territory. Now, according to Stratfor Consultant and the SSP, this organization only has presence in some towns in Tamaulipas, in the northeast of the country, especially in Matamoros and

Reynosa. It also has groups operating in Nuevo Leon and San Luis Potosi. The Gulf Cartel has an alliance with the Sinaloa Federation, which sent its armed group, the Jalisco New Generation to fight their rivals. Stratfor also recently reported that the Knights Templar also sent hitmen to Monterrey to help the cartel which has suffered major losses among its top leaders. The war that it is waging against its former allies of Los Zetas, has caused the death of thousands of people, the disappearance of hundred more, and forced whole communities into exile, which are fleeing the armed clashes.

Among the tolls of this dispute we can include the massacre of 72 undocumented migrants in San Fernando in 2010, as well as the mass kidnapping of bus passengers who were killed and their bodies buried in unmarked graves, known as narc-graves. Specialists agree that following the death of Heriberto Lazcano Lazcano, "El Lazca," the formal leader of Los Zetas, the Gulf Cartel might try to regain territories with the help of other organizations, such as the Sinaloa Federation. Meanwhile, the group maintains drug trafficking, especially cocaine, and marijuana, through the northern part of Tamaulipas that borders the United States, an area stretching from Matamoros and Reynosa y Mexico to McAllen and Pharr in Texas.

Current Leaders: Armando Ramirez Trevino, "El Pelón," "Metro 24•" or "Comandante Simple," Guadalupe Leal, "Lupito."

Captured or Killed Leaders: Antonio Cardenas Guillen, "Tony Tormenta," dead, Jorge Eduardo Costilla Sanchez, "El Coss," captured, Samuel Flores Borrego, "Metro 3,•" dead, Gregorio Saucedo Gamboa, "Caramuela," captured, Hector Saucedo Gamboa, "El Karis," dead, Ivan Velazquez Caballero, "El Taliban," captured, Juan Gabriel Sierra Zermeno, "El Sierra", captured, Mario Cardenas Guillen, "El Gordo," captured.

The Knights Templar

This cartel emerged from a split within La Familia Michoacana, the drug cartel that in 2006 trigger the start of the war on drugs by the Mexican Government. The Knights Templar is an unusual group within the organized crime environment. Its members are not allowed to use drugs, they are not allowed to drive while intoxicated, and they are not allowed to steal, kidnap or assault women. They are governed by a strict code of conduct written by Nazario Moreno Gonzalez, El Chayo or El Mas Loco, who was also the founder of La Familia, and who died during a clash with the federal police. This is a manual with biblical references, motivational tips, and popular sayings. The document was used since 2000 as a guide in rehabilitation centers for drug addicts in Michoacan, west of the country, promoted by the founders of the cartel and that according to specialists served as centers for the recruitment of hitmen. This semi-religious aspect has been one of the factors that have made the group more cohesive.

In fact, after the death of "El Chayo" communities in the mountains of Michoacan built altars and chapels where the central figure are statues and images of Nazario Moreno, wearing clothes embroidered with gold and a sword similar to the knights who fought in the Crusades during the Middle Ages. During the recent visit of Pope Benedict XVI to Mexico, the cartel declared a truce in the war against its rivals since the area of influence of this group coincided with the sites that the leader of the Catholic Church visited in Mexico. The Knights Templar control the market for the production and smuggling of drugs, especially marijuana and amphetamines in the states of Michoacan and Guanajuato, as well as in parts of the states of Mexico and Guerrero. They have an alliance with the Sinaloa Federation, especially to support their war against the cartel of Los Zetas, which were allies until 2006. In fact the Templar called on fighting the person who was going to be the successor of Heriberto Lazcano Lazcano, "El Lazca," who was the leader of Los Zetas, and who died in a clash with members of Navy. According to Stratfor, the Knights sent a group of hitmen to Monterrey to help the Gulf Cartel in its war for the control of the city.

Current Leaders: Servando Gomez Martínez, "La Tuta," Dionicio Loya Plancarte, "El Tío."

Captured or Killed Leaders: Nazario Moreno Gonzalez, "El Chayo," or "El Más Loco", dead, Jesus Mendez Vargas, "El Chango," captured, Esteban Hernandez Barajas, "La Moneda," dead, Raymundo Monroy Mendoza, "El Eclipse," captured.

Jalisco New Generation Cartel

Mexicans learned about this group when they posted a video on YouTube where they introduced themselves as Los Matazetas. The video was in reference to the killing of 35 people whose bodies were dumped in a street in the city of Veracruz, in southeastern Mexico.

Some local media published a version that it could be a paramilitary group, but the Navy Secretariat made it clear that those responsible for the massacre was a gang tied to the Sinaloa

Federation, which had among its objectives to fight Los Zetas. We are talking of the Jalisco New Generation Cartel. Some experts said that the group emerged in 2007 derived by the so-called Millenium Cartel formed by the Valencia brothers, which operated in Jalisco and Michoacan. After the death of Ignacio Coronel, "El Nacho," the third in command in the Sinaloa organization, the Jalisco Cartel virtually became independent, according to Stratfor. Currently it has a presence in the states of Jalisco, Michoacan, Colima, Quintana Roo, and the port of Veracruz. The Jalisco New Generation group controls the production of chemical drugs in Jalisco and Colima, although its main task is to fight Los Zetas, who are seeking to settle in the territory controlled by the Sinaloa Federation. This group also backs the Gulf Cartel in its fight against the cartel of Los Zetas.

Current Leaders: Nemesio Oseguera Cervantes, "El Mencho."

Captured or Killed Leaders: Oscar Nava Valencia, "El Lobo," captured, Erick Valencia Salazar, "El 85," captured, Alberto Radillo Peza, "Pancho," captured, Abundio Mendoza Gaytan, "El Guero," captured.

Drug Smuggling Techniques/Methods

You can hide drugs up your anus or vagina but a good customs agent will find them if they're suspicious. There are also experts who make a living packing suitcases and rucksacks. It is possible to do it in a way that doesn't show up on x-rays and that feels genuinely like part of the baggage. It's an acquired skill however and the customs boys know exactly what to look for. Another popular method is to buy platform shoes and cut out a space in the heels. This is hardly original but if you decide to try this please at least get used to wearing the things first. You'll look a little conspicuous overbalancing as you walk through the airport.

Narco Subs <http://www.wibw.com/internationalnews/headlines/97515289.html>

Cocaine Submarines – Great video by National Geographic on cocaine submarines.

http://www.documentarytube.com/cocaine-submarines?utm_source=feedburner&utm_medium=twitter&utm_campaign=Feed%3A+DocumentaryTube+%28Documentary+Tube%29

Colombian traffickers are using a new secret weapon smuggling cocaine north – drug submarines. Up to 30 meters long and almost impossible to detect, are capable of delivering several tons of cocaine in one shipment. Dozens of submarines are believed to be operating between the coasts of Colombia and Mexico, and police estimate that another 70 will be built next year alone. NGC is U.S. Drug Enforcement Agency and the Colombian military agents in search of drug submarine construction in some of the most remote jungles of the planet. Here, where the malaria-infested mosquitoes swarm narco-generals and heavy hand of the local population, there are at least 300 known cocaine laboratories and finished countless drug submarines and their factories. In hard-fought war against drug trafficking, an estimated catch comes in: a surprisingly sophisticated sub built by hand in the jungle.

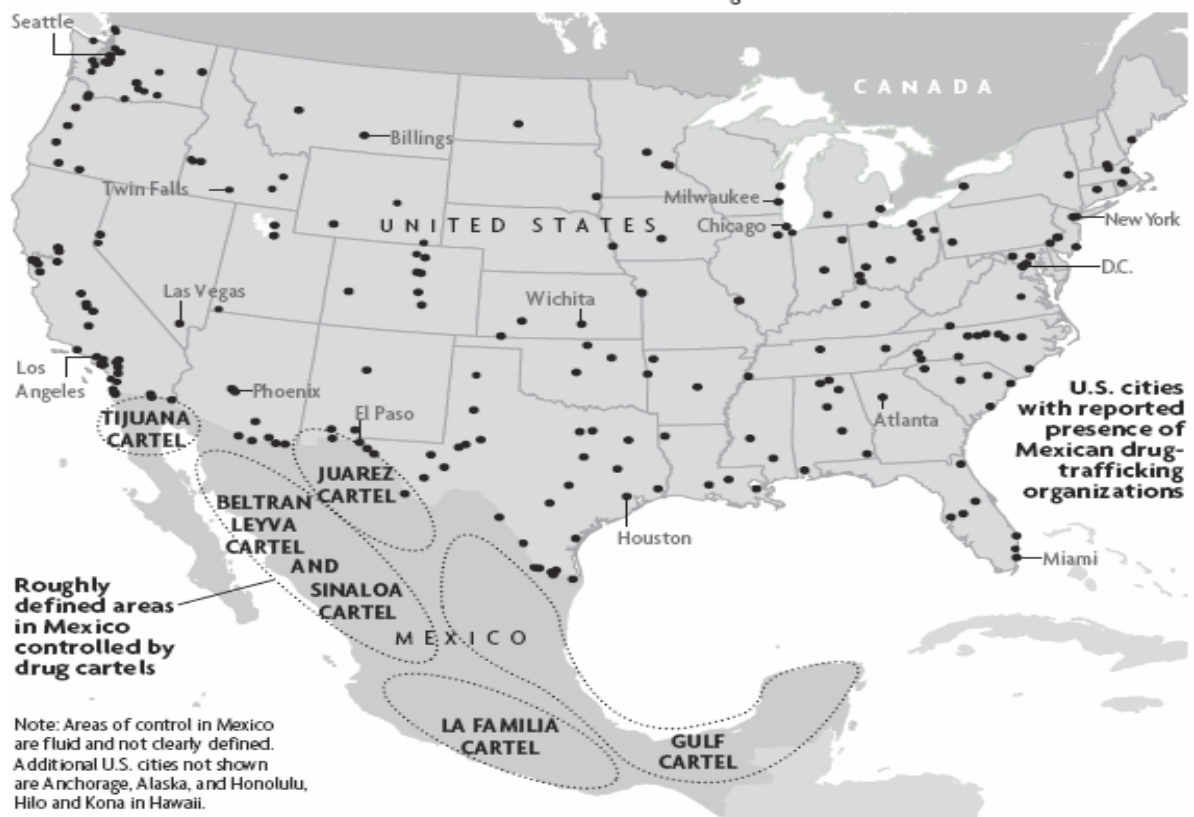

Mexican Drug Cartels Reach Into The U.S.

Mexico Under Siege: The Drug War at Our Doorstep <http://projects.latimes.com/mexico-drug-war/#/its-a-war>

Maps are interactive hyperlinked

MEXICAN DRUG CARTELS' REACH EXTENDING FAR BEYOND BORDER

Mexican drug-trafficking organizations have distribution hubs in more than 200 U.S. cities, according to the Justice Department's National Drug Enforcement Center.

Sources: U.S. Department of Justice; Congressional Research Service; Stratfor

AP

Areas of cartel influence and dispute

Drug cartels moving into the US

- Cities where Mexican cartels and their affiliates maintain drug distribution networks or supply drugs to distributors as of April 2008.

Feb. 25, 2009

Federal officials announce the arrest of more than 750 people as part of a 21-month investigation that targeted 70 distribution cells of the Sinaloa Cartel in more than 26 states, from Washington to Massachusetts.

Sept. 16-17, 2008

More than 160 people said to be members of the Gulf Cartel are arrested nationwide, including 43 in Atlanta. Officials label the city a "major drug distribution center for the Southeast and beyond."

Seized by U.S. along the southwest border in 2007

MARIJUANA

3,232,691 lbs.

Flow from Mexico has remained high despite the recent crackdown. Cartels also produce marijuana in public lands in the western United States.

COCAINE

21,986 lbs.

About 90 percent of the cocaine entering the United States from South America comes through Mexico, but availability has decreased here since 2006.

METHAMPHETAMINE

3,765 lbs.

Flow decreased due to import restrictions of ephedrine and pseudoephedrine in Mexico, but some cartels have relocated production to California.

HEROIN

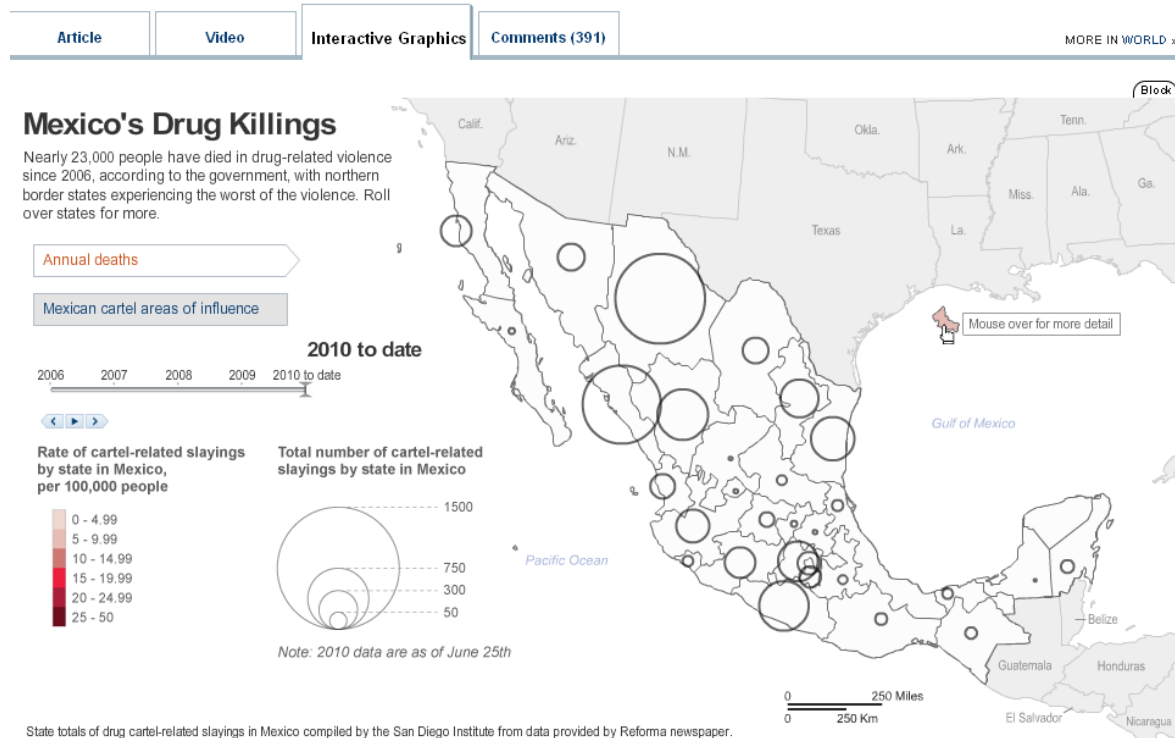

795 lbs.

A production rise in Mexico and a decrease in Colombia allowed cartels to expand heroin distribution in eastern United States in 2007.

Gangs (includes gangs in the Military)

By Scott Buhrmaster, PoliceOne Columnist Across the country, gang activity continues to grab headlines, as illustrated in numerous articles posted through PoliceOne recently. In Chicago, for example, it has been reported that officers are battling an influx of several new and violent gangs to the city. The New York Times reported earlier this month that although other types of homicides have fallen across the country, gang-related murders rose a staggering 50 percent from 1999-2002 (the last year statistics were

available). Although strong counter-gang efforts by officers in Los Angeles and Chicago (the nation's leading gang center) have effectively sparked a downtrend, LAPD Chief William J. Bratton, however, called gang violence "the emerging monster crime in America," during a speech to a national gang violence conference in Los Angeles this month. USA Today reported that some experts attribute an increase in murders in the first six months of 2003 to an overall resurgence in gang activity in many cities. And it likely comes as no surprise that even rural areas across the country are not immune to gangs. The Charlotte Observer, for example, recently ran a feature article focused on the preemptive counter-gang efforts of law enforcement in a rural North Carolina area where gang affiliation has surfaced. In fact, some remote areas outside larger cities may even attract urban gang members looking for a place to set up shop in an area where police resources may be fewer and, theoretically, awareness of gangs and tactics to suppress them may be lesser. Regardless of where you work, you will likely face the challenge of approaching gang members at some point in your career. For some of you, this may already be a daily occurrence. For others, it may be a less frequent occurrence but nonetheless one you must be tactically prepared for. Here are 10 pointers, presented specifically for patrol officers, to keep in mind when approaching gang members. Although these really just scratch the surface of the myriad gangs contact tips, they do serve as a solid foundation for your next gang contact. They also serve as a reminder that contact with gang members has unique nuances that can make a dramatic difference between well-controlled contact and a free-for-all. The better prepared you are to recognize them, the better prepared you will be to safely navigate street contact with gang members. Stay alert to your surroundings.

Knowing that they attract police attention, gang members standing in a group on the street may hide their weapons in easily accessible, nearby locations instead of on their person. Hiding spots of choice would be those easily overlooked by officers but offering quick access to gang members. Good examples are inside wheel wells of nearby cars, on top of parked car tires, inside a nearby garbage can, under bushes or under a piece of garbage on the ground. Another surrounding threat may be gang members—both friendly and rival—across the street from your contact, secreted in nearby alleys or in vehicles, driving by. To fellow gang members, your contact with their street brothers and sisters may be considered threatening and warrant distractive, perhaps offensive, action. To rival gang members, your contact with their enemies may be seen as an opportunity to attack while the enemy isn't watching—particularly if the attacker is looking to score points for courage (and stupidity) for attacking in police presence. An ideal gang contact will involve three officers: a contact officer making direct contact with the gang members, a primary cover officer spotting the contact officer and a secondary contact officer scanning the surrounding area for threats. Obviously that kind of personnel isn't always available, but when possible, the three-officer approach is preferable. Pay particular attention to underage juveniles.

Knowing that underage juveniles may face lesser weapons possession charges than older members and may be considered less threatening to an approaching officer, gangs may have younger members carry their weapons for them. When approaching gang members, stay keenly alert to the younger members, both for the fact that they may be armed and for the fact that, in an effort to impress older members, they may be more inclined to confront, challenge or act violently towards law enforcement. Pay particular attention to females.

Under the assumption that officers approaching a group of gang members may make the dangerous mistake of disregarding females as less of a tactical risk than males, gang members may have females carry their weapons for them. They may also do so with the thought that male officers without a female partner or a female officer close by may shy away from closely searching a female in the group, particularly if efforts to do so are met with resistance, threats and ridicule. Be prepared to handle females with as much tactical caution and thoroughness as you would with males. Watch out for dogs.

Obviously the presence of a dog should warrant special attention, but be aware that gang members have been known to train dogs to respond to non-verbal attack commands like touching a pant leg, pulling on a shirt or dropping a leash. A dog can be a dangerous, even deadly weapon. Handle its presence at the scene as such. Avoid showing obvious disrespect.

In gang culture, respect is often worth more than gold and can make the difference between life and death. Efforts to degrade, embarrass or show outward disrespect for gang members will likely be met with strong resistance and may incite violence that otherwise could have been avoided. Regardless of your true feelings, try to maintain an air of respect without alluding to weakness, inferiority or lack of control of the situation. A facade of respect will help you maintain control and may yield mutual respect that will prove beneficial at the point of contact and in the future. Do keep in mind, however, that in an arrest situation anything goes. If, for example, a gang member you are arresting asks that you not cuff

him until he is out of eyeshot of his associates to avoid embarrassment, this is an obvious no-no. Tactical soundness takes priority over all other considerations. Don't overreact.

"Overreacting tends to make officers appear to be someone who shows fear," says PoliceOne gang expert and P1 Discussion Board moderator Bob Walker. "Gang members refer to this type of officer as 'scary'--someone who shows fear and over reacts." Fear alludes to vulnerability and lack of control, which may increase the chances that combative members may confront you. However, be sure that in your effort to avoid overreacting you don't UNDERreact. Remain in control of yourself and the situation while responding with the appropriate level of action. Know your jargon and your facts...or don't use them.

One of the quickest ways to lose respect and credibility and to put yourself in danger when dealing with gang members is to show signs of ignorance to gang jargon and culture. Although communicating with gang bangers on a colloquial level may facilitate better communication, deeper respect, and may yield more information, if you're not up to date on all the current street terms, don't use them. The same holds true with gang-related facts. If you're not sure of what you're saying, don't say it. In the world of gangs and law enforcement, ignorance is not bliss, it's dangerous. "Most street officers who are not specifically assigned to gang units are dealing with all kinds of different people and occurrences," says Walker "They don't have the convenience of dedicating time to learning lots of gang slang and then staying updated on changes. "Once you start using slang, you're opening the door to the rest of your conversation being conducted in slang. If you're not fully confident of your ability to speak gang language, it's better to use no slang at all than to toss out a few terms in an effort to be cool, and then find yourself coming up short later in the conversation." Walk the walk.

Never threaten anything that you can't or won't follow through on. If you say you're going to respond in a certain way if your questions aren't answered, do it. If you say action will be taken if certain behavior isn't immediately terminated, take it. And on the flip side, if you promise something that you can in fact provide in response to cooperation, follow through on your "agreement." Another quick way to lose credibility and diminish the odds of future cooperation is to make shallow threats and meaningless promises. Pay close attention to clothing.

Some gang wear is conducive to effectively hiding weapons. Things like baggy pants with deep pockets, oversized shirts, thick coats, and ball caps lend themselves well to secreting a variety of weapons including, of course, guns. Pay very close attention to the movements of gang bangers who may be wearing clothes that are especially good for hiding weapons. Also remember to search very thoroughly and cautiously when that level of contact is warranted. Use 'interest' as a means of gathering intelligence.

You may be surprised at how much can be learned just by asking with interest and waiting for an answer. Whenever possible, ask gang members questions that may yield valuable intelligence information without a demanding or overbearing tone. Ask about things like leadership, new gang members, upcoming activities, problems with rival gangs, shifts in territory...anything and everything that may prove helpful to anti-gang efforts. Be sure to take notes when reasonable and be sure to share the intelligence with your command staff, fellow officers and your gang unit.

AB - Aryan Brotherhood -- A white supremacist prison/street gang founded in the 1960s in California. 666 is another tag associated with this Caucasian gang.

ABC - Altadena Blocc Crips -- A predominantly African-American street gang based in the San Gabriel Valley of Southern California. Their name is occasionally spelled "Altadena Bloc Crips" or "Altadena Block Crips."

ABC - Asian Boy Crips -- An Asian-American street gang founded in Minnesota.

ABCC - Acacia Blocc Compton Crips -- An

African-American street gang that originated in Compton, California.

ABT - Aryan Brotherhood of Texas -- A white supremacist prison/street gang founded in Texas in the 1980s.

ABZ - Asian Boyz -- An Asian-American street gang that originated in Southern California, then later spread to a number of cities across the country. They have grown to become one of America's largest Asian street gangs. Many of the ABZ sets are comprised primarily of Cambodian-Americans. AB, ABS, and 1 2 26 (1 = A, 2 = B, 26 = Z) are a few of the other tags associated with this gang. Their colors include black, yellow, and green. A tattoo of a dragon wrapped around the letter "A" can occasionally be found on its members. Tiny Rascal Gangsters (TRG),

and Wah Ching have been rivals of this gang.

AC - Aryan Circle -- A white supremacist street/prison gang that has spread to dozens of states throughout the country.

ACB - Asian Crip Boys -- An Asian-American street gang found in multiple locations, including--but not limited to--California, Washington, Illinois, Georgia, and North Carolina.

ACG - Asian Crip Girls -- An Asian-American street gang. In Minnesota, this gang is predominantly Hmong.

ADCC - Atlantic Drive Compton Crips -- A Southern California street gang found south of Los Angeles in Compton.

ADL - Altadena Denver Lanes -- A Southern California street gang found in the San Gabriel Valley. This Bloods' gang is comprised primarily of African-Americans. Red has been their chosen color.

AFO - Arellano-Felix Organization -- A major North American drug trafficking cartel that is also known as the Tijuana Cartel.

AGC - Avalon Gangsta Crips -- An African-American street gang founded in Los Angeles, California.

AIB - Asian Insane Boys -- An Asian-American street gang in Southern California.

AIGN - Almighty Imperial Gangster Nation -- An African-American street gang. IG and AIG are a couple of other tags associated with this gang.

AKA - Asian Kick Ass -- An Asian-American street gang in Southern California. They've arguably been most active in the San Gabriel Valley, east of Los Angeles, California.

AKB - Asian Killa Boyz -- A Southern California street gang based in the San Gabriel Valley.

AKP - Asian King Posse -- A predominantly Hmong street gang in the Midwest. They've arguably been most active in Detroit, Michigan, Minneapolis/St. Paul, Minnesota and Wisconsin. 116 is another tag associated with this Asian-American gang.

ALK - Almighty Latin Kings -- Founded in Chicago, Illinois, they are one of the largest Hispanic gangs in the United States. They're also known as the Latin Kings (LK), Almighty Latin King Nation (ALKN), and Almighty Latin King and Queen Nation (ALKQN).

ALKN - Almighty Latin King Nation (See above ALK entry)

ALKQN - Almighty Latin King and Queen Nation (See above ALK entry)

ANO - Aryan Nation Outlaws -- A white supremacist gang that was reportedly founded by members of the Aryan Brotherhood of Texas.

AOA - American Outlaws Association -- A motorcycle gang also known as the Outlaws Motorcycle Club and Outlaws Nation.

AP - Armenian Power -- An Armenian street gang most active in Hollywood, Glendale, the eastern San Fernando Valley, and western San Gabriel Valley of Southern California. AP 13, AP X3, and AP XIII are a few of the other tags associated with this gang.

AP - Avenue Pirus -- A Southern California street gang that is occasionally known as Avenue Piru Gang (APG).

APB - Athens Park Boys -- A street gang

that originated in Los Angeles, California. They later popped up in a few other locations across the country.

APO - Asian Pride Only -- An Asian-American street gang most active in California and Oregon.

AS - Aryan Soldiers -- A white supremacist street/prison gang.

ASW - Asian Street Walkers -- An Asian-American street gang that is occasionally known as Asian Street Warriors. They've been active in Utah, Idaho, and especially Stockton, California. Many of their members have been of Cambodian ancestry.

A13 - Azusa 13 -- A predominantly Hispanic street gang in Southern California. The gang (also known as Varrio Azusa 13, and Varrio Azusa 13 Rifa) can be found in the San Gabriel Valley community of Azusa, in Los Angeles County. This Mexican Mafia affiliated gang has been accused of engaging in a campaign of violence and harassment to drive African-Americans out of the city of Azusa as well as prevent blacks from moving into the SGV city. In addition to the aforementioned hate crimes, a 2011 federal indictment also showed they sought to monopolize the market for illegal drugs in Azusa, California.

ATC - Anaheim Travelers City -- An Anaheim, California street gang. SouthSide Krooks (SSK) has been a rival of this Southern California gang. ATC LM (Anaheim Travelers City Los Malos) is another tag associated with this gang.

AV - Ashland Vikings -- A predominantly Hispanic street gang based in Chicago, Illinois. AVs and AVN (Ashland Vikings Nation) are a couple of other tags associated with this gang. Their rivals include—but are not limited to—La Raza, Harrison Gents, Playboys, and Maniac Latin Disciples.

Aves - The Avenues -- A Mexican-American street/prison gang that has been most active in northeastern Los Angeles, California. Their turf has included Highland Park, Glassell Park, as well as sections of Cypress Park, and Eagle Rock. Founded in the 1950s, the gang (also known as Avenidas) was named for the avenues in northeast L.A. that cross Figueroa. They're very closely associated with the Mexican Mafia (La Eme). Members of the Avenues have been convicted of committing hate crimes aimed at driving black residents out of the predominantly Latino neighborhoods of northeastern Los Angeles. Highland Park (HLP) has been a rival of this gang. The use of an apostrophe (Ave's) occasionally appears in tagging. A tattoo of a skull wearing a fedora is commonly found on many of its members. Cliques include Drew Street, Cypress Aves, Division Street (DVST), 43rd Aves, Avenues 57, etc.

BA - Barrio Azteca -- Founded in the 1980s, Barrio Azteca is a Mexican-

American street/prison gang and drug cartel that has been most active in the Southwestern United States.

BA - Brown Authority -- A predominantly Hispanic street gang in Pico Rivera, California. Pico Viejo has been a rival of this Los Angeles County gang.

BB - Border Brothers -- A predominantly Hispanic prison/street gang that has been most active in California and Arizona. Although they are primarily known as a prison gang, they have increasingly been establishing a presence on the streets. 22 and XXII are a couple of other tags associated with the Border Bros. (The number 2 represents the letter "B" -- thus, 22 = BB.) Some cliques claim black as their gang color.

BBH - Brown Brotherhood -- A predominantly Hispanic street gang that has arguably been most active in the California cities of Vallejo (in Solano County) and Whittier (in Los Angeles County). BBH 13 and BBHX3 are a couple of other tags associated with this gang.

BCR - Brown Crowd Raza -- A Sureño street gang found in the vicinity of Portland, Oregon.

BD - Black Disciples -- An African-American street gang founded in Chicago. They are also known as the Almighty Black Disciple Nation (ABDN).

BD - Black Dragons -- An Asian-American street gang and organized crime syndicate that was founded in the 1980s. They've been most active in Monterey Park and Rosemead in the San Gabriel Valley, and Los Angeles, California. Many of their members have been ethnic Chinese from Vietnam. Black Dragons can occasionally be identified by their use of the Oakland Raiders' number 80 jersey of Jerry Rice.

BDS - Bulldogs -- A predominantly Hispanic street/prison gang in Fresno, California. FBD and F-14 (Fresno 14) are a couple of other tags associated with this gang. Red has been their traditional color.

BG - Bassett Grande -- A Southern California street gang that is also known as Bassett Grande 13. LNO (Los Nite Owls) is another tag associated with this gang.

BGC - Broadway Gangsta Crips -- An African-American street gang that originated in Los Angeles, California. NOTE: It's occasionally spelled Broadway Gangster Crips.

BGF - Black Guerrilla Family -- An African-American gang that was originally called Black Family or Black Vanguard, and was founded in 1966, at the San Quentin State Prison in California.

BH - Big Hazard -- A predominantly Mexican-American street gang found in East Los Angeles, California, and a few other locations across the country.

BHB - Bad Hamo Bloods -- A street gang on the island of O'ahu in Hawai'i. They

have been most active in Kalihi, Honolulu, Hawaii'i.

BHB - Big Head Boyz -- A street gang in Boston, Massachusetts. Their turf has included the area in the vicinity of the city streets of Brunswick, Creston, and Fayston. MIC (Magnolia Intervale Columbia), and Columbia Road Rockies have been rivals of this gang.

BHB - Bounty Hunter Bloods -- A predominantly African-American street gang. Although they are primarily an East Coast gang found in Virginia and New Jersey, they've also established themselves in a number of other locations across the country.

BHT - Barrio Hollister Territory -- A street gang in Hollister, California. This San Benito County gang is reportedly affiliated with the Nortenos.

BLD - Bloods -- A large, African-American gang that was founded in California. The Crips are the long-time rivals of the Bloods. Red has been this gang's traditional color. Bloods can frequently be identified by their use of red clothing, and/or red bandanas. Red is also the preferred color of spray paint for Blood graffiti.

BLST - Barrio Libre South Tucson -- A Mexican-American street gang in Pima County, Arizona. BLST 13 is another tag associated with this South Tucson gang.

BMC - Brown Magic Clique -- A predominantly Hispanic street gang that's found along the Oregon - Idaho border. BMC has been most active in Nyssa, and Ontario, in Malheur County, Oregon.

FD - Flying Dragons -- A multi-national street gang comprised primarily of Asians. Although they can be found in many locations around the world, they have arguably been most active in Hong Kong, Canada, Australia, New Jersey, New York City's Chinatown, Queens, and Brooklyn.

504 - Gotti Boyz -- An African-American street gang that has been most active in the 3rd ward of New Orleans, Louisiana. They have also been found in Atlanta, Georgia, and Houston, Texas. The 504 that occasionally represents this gang has been the area code for New Orleans.

4CH - Four Corner Hustlers -- An African-American street gang founded in Chicago, Illinois in the late 1960s. They later spread to numerous locations across the United States. In their early days, black and brown were their colors. Later, black and gold emerged as their chosen colors.

4Seas - Four Seas Mafia -- A multi-national street gang and crime syndicate. Originally based in Taiwan, their sphere of influence later spread to China, Korea, and Japan. It is the four countries of Taiwan, China, Korea, and Japan, which gives them their name, "Four" Seas Mafia. In the United States, 4Seas is a street gang, rather than a more sophisticated crime syndicate. The Four Seas Mafia has been most active in the San Gabriel Valley of Southern California.

14 - Nortenos -- The number 14 represents the letter "N" (the fourteenth letter of the alphabet) to denote the Nortenos (Spanish for Northerners), or an affiliation with them. Red has been their traditional color. They are very closely affiliated with the prison gang Nuestra Familia. The Mexican Mafia (La Eme) and the Sureños (Spanish for Southerners) have been their traditional rivals. Nebraska Cornhuskers' jerseys and related sportswear are occasionally worn by its members. University of Nebraska apparel is popular with Nortenos because of their prominent "N" and red color. In addition to the aforementioned Big Red apparel, members have also worn San Francisco 49ers' gear, and University of Nevada, Las Vegas sportswear. The meaning of the UNLV acronym being altered to "Us Nortenos Love Violence." Graffiti, or tattoos of a Huelga bird can occasionally indicate a Norteno affiliation, as can a red belt, red shoe laces, or any apparel with the number 14 prominently

displayed. XIV, and X4 are a couple of other tags associated with them.

FSC - Fair Street Crips -- A predominantly African-American street gang in the Atlanta, Georgia area.

FS13 - Flip Side 13 -- A Southern California street gang comprised primarily of Filipino-Americans.

FSU - Friends Stand United -- A street gang founded in Boston, Massachusetts in the early 1990s. Their gang acronym, FSU, can also stand for Fuck Shit Up, and Forever Stand United.

TAP Boyz - The Arabian Posse Boyz -- An Arab-American gang based in Chicago, Illinois.

TB - Tango Blast -- A street/prison gang based in Texas. PTB and 16-20-2 are a couple of other tags associated with this gang.

TBS - Tiny Boys Surenos -- A predominantly Hispanic street gang found in multiple locations, including--but not limited to--California, Oregon, and Washington. TBS 13 is another tag associated with this gang that is occasionally known as Tiny Boy Surenos.

TBS - True Brown Style -- A multi-national street gang. TBS 13 and TBS XIII are a couple of other tags associated with this international gang.

TCB - Texas Chicano Brotherhood -- A predominantly Mexican-American gang founded in 1989, as a result of an internal rift within the Tri-City Bombers. The Tri-City Bombers became bitter rivals with this South Texas gang. TXCB is occasionally offered as an acronym for the Chicano Bro's.

TCB - Tri-City Bombers -- A predominantly Hispanic street/prison gang, also known as the Bombitas. Founded in the South Texas Rio Grande Valley, in an area known as the Tri-Cities (Pharr, San Juan, and Alamo), they've spread to multiple locations, including--but not limited to--Iowa, Minnesota and Ohio. But they are most active in the Tri-Cities area, as well as Austin, Dallas and Houston, Texas. Po' Boys, and Texas Chicano Brotherhood have been their rivals. (Texas Chicano Brotherhood was actually founded as a result of an internal rift within the Tri-City Bombers. This has been the reason they've been such bitter rivals.) 39 and TRICB are a couple of other tags associated with this gang. A typical Bomber tattoo consists of the letters TCB

with a fused, round bomb found within or attached to those letters. Their gang colors are usually red and black.

TCG - Tongan Crip Gang -- A street gang comprised primarily of Pacific Islanders. This gang--also known as the Tongan Crip Gangsters--has been most prevalent in California, Hawaii and Utah.

TCR - Tongan Crip Regulators -- A street gang based in the Salt Lake City, Utah area.

TCS - Titanic Crip Society -- A predominantly Hispanic street gang based in Utah. Blue is this gang's traditional color.

TGP - Tau Gamma Pinoy -- A predominantly Filipino-American street gang in Southern California.

THS - Tropang Hudus -- A Southern California street gang based in the San Gabriel Valley.

3AK - Third Avenue Killers -- A predominantly Native American gang found in Northern Minnesota. This American Indian gang has arguably been most active in the vicinity of Bemidji, and Cass Lake, in Beltrami and Cass Counties.

3ni - Trinitarios -- A multi-national street/prison gang comprised primarily of Hispanics of Dominican ancestry. Founded circa 1990 in New York, they quickly spread throughout the East Coast of the United States. They've been most active in New Jersey, as well as Brooklyn, The Bronx, and the Washington Heights area of New York. Their gang colors include blue, red, black and especially lime green. DPL, and Trini are a couple of other tags associated with this gang.

313 - Chaldean Mafia -- 313 represents the third and the thirteenth letters of the alphabet, to stand for "CM" (Chaldean Mafia). Based in Michigan, this "stealth" street/prison gang is comprised primarily of Middle-Eastern individuals of Iraqi ancestry.

TLS - Tiny Locos -- A predominantly Hispanic street gang that is not only an independent street gang located in several cities across the country, but also a subset comprised of the younger members of several other gangs. They've arguably been most active in California, Oregon and Washington. Some cliques claim blue as their gang color.

TLT - True Local Thug -- An Asian-American street gang found in the Twin Cities (Minneapolis / St. Paul) area of Minnesota. 317 is another tag associated with this gang.

TM - Texas Mafia -- A predominantly Caucasian gang founded in the Texas prison system in the early 1980s.

TMC - Tiny Man Crew -- An Asian-American street gang in Minnesota and Wisconsin. They've been most active in Green Bay, Menasha, and Oshkosh,

Wisconsin.

TMK - Tonight Monte Kills -- A predominantly Hispanic street gang based in the San Gabriel Valley area of Southern California.

TOP - Tiny Oriental Posse -- A multi-national Asian street gang in Southern California, and previously active in West Valley City, Utah.

TRG - Tiny Rascal Gangsters -- A predominantly Asian-American gang, also known as the Tiny Rascal Gang, Tiny Rascal Gang, or Tiny Rascals. TRG was founded in Long Beach, California in the mid-1980s. Many of the TRG sets are comprised primarily of Cambodian-Americans. They can now be found in a number of locations across the country, including--but not limited to--Connecticut, Central and Southern California, Brattleboro, Vermont, both Portland and Sanford in Maine, Washington, D.C., as well as the Twin Cities (Minneapolis / St. Paul) area of Minnesota. They are also reportedly found in both Lawrence and Brockton in Massachusetts. East Side Longos (ESL), and Asian BoyZ (ABZ) are among their rivals. TRG gang colors include black, blue and gray. 7126 is another tag associated with this gang.

TS - Texas Syndicate -- A street/prison gang, also known as Sindicato Tejano, that was founded in the early 1970s. Their gang members are primarily Mexican-American.

TSN - Two-Six Nation -- A predominantly Latino street gang founded in Chicago back in the mid-20th century. 2-6N, G26, and GTS are some of the other tags associated with this gang. In Chicago, Illinois, the Latin Kings are their primary rivals. Their gang colors are usually black and tan.

TSO - Texas Syndicate Originals -- A faction of the Texas Syndicate gang.

TSU - Texas Syndicate United -- A faction of the Texas Syndicate gang.

TVL - Traveling Vice Lords -- A predominantly African-American gang with roots in Chicago, Illinois. They are also known as the Traveler Vice Lords.

TVR 13 - Tooner Ville Rifa 13 -- A Mexican-American gang based in Southern California. With roots dating back to the mid-20th century, their sphere of influence has included areas of Los Angeles, Glendale and surrounding communities.

TWS - Tiny Winos -- Tiny Winos is not only an independent street gang located in several cities across the country, but is also a subset (very young members, typically) of several other gangs.

TWS - Westside 18th Street Tiny Winos -- A Sureno street gang found in the vicinity of Portland, Oregon.

UAM - United Asian Mafia -- A Southern

California street gang. They've arguably been most active in Orange County, and Pomona. Tiny Rascal Gang (TRG) has been one of their rivals.

UB - United Bamboo -- A multi-national crime syndicate comprised primarily of Asians. This triad was founded in Taiwan in the mid-20th century. They're occasionally known as the United Bamboo Gang (UBG). In the United States, this organized crime network has been most active in the San Gabriel Valley of Southern California. Specific areas that have seen United Bamboo activity include--but are not limited to--Houston, Texas, New York City's Chinatown, LA's Chinatown, and the California cities of Alhambra, Diamond Bar, Hacienda Heights, Monterey Park, Paramount, Rosemead, and Rowland Heights.

UBN - United Blood Nation -- A gang founded in 1993 at Rikers Island prison, and later spread throughout the East Coast of the United States.

UEC - Unexpected Criminals -- A Southern California street gang.

URC - Unknown Rapist Crew -- A predominantly Hmong street gang.

USC - Unstoppable Criminals -- A California-based street gang that is occasionally referred to as the "Unseen Criminals."

UTVL - Undertaker Vice Lords -- An African-American gang founded in Chicago, Illinois, in the 1970s.

UVL - Unknown Vice Lords -- An African-American gang founded in Chicago, Illinois. They're now found in numerous locations across the United States.

VB - Valentine Bloods -- A predominantly African-American street gang. Over the years, they've arguably been most active in California, Florida, New Jersey, North Carolina, and New York.

VB - Viet Boys -- An Asian-American street gang found in the vicinity of Seattle, Washington.

VBZ - Viet Boyz -- An Asian-American street gang that originated in Southern California.

VC - Varrio Catorce -- A street gang found in California, Oregon and Washington. 14, XIV, X4, VC 14, VC XIV, and VC X4 are a few of the tags associated with this gang.

VC - Varrio Centro -- A predominantly Mexican-American street gang that has been most active in the vicinity of Fort Worth, Texas.

VCFO - Vicente Carrillo-Fuentes Organization -- A major North American drug trafficking cartel.

VDH - Varrio Diamond Hill -- A street gang that has been most active in Fort Worth, Texas. Varrio North Side (VNS) has been a key rival.

VDM - Very Dangerous Mexicans -- A Mexican-American street gang found in North Carolina.

VF - Volksfront -- A white supremacist street/prison gang founded in 1994. Although Volksfront chapters exist across the United States, as well as several foreign countries, they have arguably been most active in Portland, Oregon, and Missouri. Their colors include red, white and black. WP (White Power), ROA (Race Over All), and the swastika are a few of the other tags associated with this neo-Nazi group.

VFL - Varrio Fallbrook Locos -- A predominantly Mexican-American street gang in Fallbrook, California. VFL 13 is another tag associated with this Southern California gang.

VHG - Varrio Hawaiian Gardens -- A predominantly Hispanic street gang based in Hawaiian Gardens, California. VHG has roots dating back to the mid-20th century. Members of this Southern California gang have been known to take pride in their racism and mission to rid Hawaiian Gardens of all African-American residents through a campaign of violence and intimidation. Some members have even admitted VHG is a "Hate Gang."

VHK - Vamphill Kings -- A Boston, Massachusetts street gang. Vamp Hill gang colors include black and white, and also black and silver.

VL - Vatos Locos -- A street gang active in California, Oregon, Washington, North Carolina, Georgia, Washington, D.C. and several other locations across the country. VLS and VL X3 are a couple of other tags occasionally associated with this gang.

VL - Vice Lords -- A large, predominantly African-American gang street/prison founded in Chicago in the mid-20th century. Although they now have a nationwide presence, they're most active in the Midwest. In spite of the fact they are often recognized primarily as a black gang, there have been documented cases of both Caucasian and Hispanic Vice Lords' members. They have also been known as the Vice Lord Nation (VLN), Almighty Vice Lord Nation (AVLN), and Conservative Vice Lord Nation (CVLN). 312, which is Chicago's area code, is a common tattoo found on members of the Vice Lords. Their colors include gold, black and red.

VLA - Varrio Los Avenues -- A predominantly Hispanic street gang in Yuma, Arizona.

VLM - Vatos Locos Mexicanos -- A North American street gang comprised primarily of Hispanics.

VLT - Varrio Loco Town -- A predominantly Mexican-American street gang in Salt Lake City, Utah.

VM - Vietnamese Mafia -- An Asian-American street gang.

VMH - Varrio Madison Heights -- A Maricopa County, Arizona street gang.

VML - Varrio Mesa Locos -- A predominantly Hispanic street gang based in Oceanside, California. ML, 13 12 (13 represents the letter "M" and 12 represents the letter "L"), VMLS, and MESA are a few of the other tags associated with this San Diego County gang.

VNE - Varrio Nuevo Estrada -- A Mexican-American street gang founded in East Los Angeles, California. Their sphere of influence has since spread to other Southern California communities.

VNS - Varrio North Side -- A predominantly Mexican-American street gang that has arguably been most active in California, Texas, and Washington. In Fort Worth, Texas, Varrio Diamond Hill (VDH) has been one of their key rivals.

VPG - Viet Pride Gangsters -- An Asian-American street gang occasionally known as Viet Pride Gang or Viet Pride Gangstas.

VPL - Varrio Posole Locos -- A predominantly Hispanic street gang based in Oceanside, California. P, PT, VP, VPL, VPLS, Posole, Posoles, M, Eme, Varrio Posole, Posole Town, 13, 16, 16 20, 22, 22 16, 22 16 12, and 22 16 12 19 are a few of the other tags associated with this San Diego County gang.

VPR - Varrio Pasadena Rifa -- A predominantly Hispanic street gang found in Pasadena, California. Both South Side Pasadena, and North Side Pasadena have been rivals of this Los Angeles County gang.

VSJ - Varrio San Jose -- A predominantly Hispanic street gang based in San Jose, California.

VSLC - Venice Shoreline Crips -- An African-American street gang found in Venice, California. VSC is occasionally offered as an acronym for this Crips' set.

VSM - Varrio San Marcos -- A predominantly Hispanic street gang based in San Marcos, California. They're also known as Wolfpack, Lobo Town, and Ghost Town. VSM, SM, WP, WPLS, GT, 19 13 (19 represents the letter "S" and 13 represents the letter "M"), 23 16 (23 represents the letter "W" and 16 represents the letter "P"), and 7 20 (7 represents the letter "G" and 20 represents the letter "T") are a few of the other tags associated with this San Diego County gang.

VSV - Varrio Simi Valley -- A street gang in Ventura County, California. Organized in the 1980s, this gang was initially comprised of Mexican-Americans, though some Caucasian members have been documented. They've been most active in Simi Valley and Moorpark. Moorpark Locos (MPLS) has been a rival of this gang.

VVR - Varrio Vista Rifa -- A predominantly

Hispanic street gang in Los Angeles, California. VVR X3 is another tag associated with this gang.

WB - The Wonder Boys -- A Mexican-American street gang in the Yuma, Arizona area. They are also known as Los Wonder Boys, or Wonder Bois.

WBP - Wetback Power -- A Mexican-American street gang.

WCMP - West Covina Mob Piru -- A Southern California street gang based in the San Gabriel Valley community of West Covina.

WF13 - White Fence 13 -- A Mexican-American street gang founded in East Los Angeles, California.

WK - White Knights -- A white supremacist street/prison gang founded in the Texas prison system in 1991.

WNS - Winos -- A predominantly Hispanic street gang. They have arguably been most active in California, Oregon and Washington. They are not only an independent street gang located in several cities across the country, but also a subset (younger members, typically) of several other gangs.

WSBP - West Side Brown Pride -- A predominantly Mexican-American street gang found in the American Southwest. Although they are found in several locations, they are most active in Phoenix, Arizona. WSBP13 and WSBPXIII are a couple of other tags associated with this gang.

WSBPL - West Side Brown Pride Locos -- A predominantly Mexican-American street gang found in Tucson, Arizona.

WSC - West Side Crips -- An African-American street gang.

WS18 - Westside 18th Street -- A Sureno gang found in the vicinity of Portland, Oregon. XVIII, X8 and XV3 are a few of the tags associated with this gang.

WS18TWS - Westside 18th Street Tiny Winos -- A Sureno street gang found in the vicinity of Portland, Oregon.

WSI - West Side Islanders -- A street gang comprised primarily of Pacific Islanders. They have been found in California, Oregon, Washington, and on the island of Oahu in Hawai'i. They have arguably been most active in Honolulu, Hawai'i, and Long Beach, California.

WSL - Westside Locos -- A predominantly Hispanic street gang found in numerous locations from coast to coast. They are arguably most active in California, Florida, and Georgia. WSL 13, WSL X3 and WSL XIII are a few of the other tags associated with this gang. Be aware that some WSL sets claim an alliance with the Nortenos, while others are allied with the Surenos.

WSM - West Side Mesa -- An Arizona street gang comprised primarily of Hispanics.

WSP - West Side Pomona -- A predominantly Hispanic street gang that originated in Pomona, California. WSP 13, WSP X3 and WSP XIII are a few of the other tags associated with this gang.

WSV - West Side Verdugo -- A Southern California street gang, also known as the Mount Vernon Gang (MVG).

WSW - Westside Wilmas -- A predominantly Hispanic street gang found in the South Bay area of Los Angeles. They've been most active in Wilmington

and Long Beach, California. Eastside Wilmas (ESW) has been one of their rivals.

WTX - West Texas Tangos -- A predominantly Hispanic street/prison gang.

WVL - Whittier Varrio Locos -- A predominantly Hispanic street gang found in the Whittier area, southeast of Los Angeles, California.

WVN - Watson Varrio Norte -- A Santa Cruz County, California street gang found in the Watsonville area.

YCT - Young Crazy Thugs -- A Southern California street gang that is occasionally spelled "Young Crazy Thugz."

YOG - Young Oriental Gangsters -- An Asian-American gang.

YOH - Youth of Hitler -- A white supremacist skinhead gang found in Portland, and Milwaukie, which is located southeast of Portland, Oregon.

YOT - Young Oriental Troop -- An Asian-American street gang found in the vicinity of Seattle, Washington.

YTK - Young Terrible Kids -- A street gang found in Hawaii.

YTL - Young 20 Locs -- A predominantly African-American street gang found in Long Beach, California. They are a subset and younger generation of the Rollin' 20 Crips (RTC). Their chosen colors are black and yellow, and members often wear Pittsburgh Steelers apparel.

ZP - Zoe Pound -- A predominantly Haitian gang found in Florida, as well as other locations.

OGK is a gang in Albany New York, "Original Gangsta Killers"

OGK-Original Gangster Kingz is another gang that operates out of New York and perhaps Illinois

Gangs in The Military (According to the FBI, 15,000 men and women in the U.S. military have ties to notorious American gangs such as MS-13, the Crips, the Bloods, and the Gangster Disciples.)

<http://www.policemag.com/Videos/Channel/Gangs/2011/01/Gangs-In-the-Military-Part-1.aspx>

Gang tattoos are an excellent tool for law enforcement and corrections officers to use to identify known or suspected gang members. This gallery includes examples of tattoos worn by predominantly Hispanic gangs such as the Mexican Mafia, MS-13, and the Latin Kings. The number "13" is used because M (or La Eme) is the thirteenth letter of the alphabet and is used to signify the Mexican Mafia, which uses Sureños—gangs that swear allegiance to the Mexican Mafia—to carry out its orders from prison. <http://www.policemag.com/Channel/Gangs/PhotoGallery/2009/08/Gang-Tattoos-Hispanic.aspx>

Flixxy	http://www.onairtoday.com/
	http://www.flixxy.com/

[Zoomr](#) : Recent startup that is shaping up to take on Flickr. Have just announced they will be increasing monthly limits on free and paid accounts to more than what Flickr offers.

[Vmix](#) : Founded by the people behind MP3.com, Vmix offers photo and video sharing along with the ability to create you own slideshows. A busy-looking site that seems to have quite a bit of traffic.

[Flickr](#) : The daddy of photo-sharing sites, the first in the breed of web 2.0 photo sites, allows you to create galleries, tag photos etc. The biggest in terms of traffic and was acquired by Yahoo.

[Fotki](#) : Founded in 1998 Fotki has been around for ages in relation to a lot on this list, it offers a range of services such as photo-sharing, photo-printing, photo-selling and blogging.

[Fotolog](#) : Large photo blogging community - claims to have a staggering 1.5 billion page views and receive over 20 million unique visitors per month which is backed up by its alexa ranking of [33](#).

[Fototopic](#) : Another site that has been around a few years; since 1999. Offers gallery services and also prints and your photos on to various gifts within their store.

[Glowfoto](#) : A basic photo sharing site that offers galleries and the option to upload via mobile phone. 25million photos have been uploaded by 73k users so far.

[DotPhoto](#) replaced [MyPhotoAlbum](#) : Photo sharing with the usual features and also offers printing; currently offering 15 free prints to new users. Has had 32million photos uploaded so far.

[Panoramio](#) : Photo storage and a mapping feature via a mashup with google maps. Each photo gets linked with the place it was taken. 2GB storage included for free.

[Zoomonga](#) : A nice-looking site but the rather stingy 20mb of uploads per month on the free plan could be why it doesnt look exactly busy.

[Webshots](#) : Another huge site owned by Cnet. Provides the usual photo sharing features plus a desktop utility for organising photos, prints on gifts etc.

[Photobucket](#) : The favourite of myspace users, provides free and paid accounts for image hosting and video hosting along with the ability to create a flash slideshow. Have harnessed viral marketing to a tee and provide most of the image hosting for myspace and other social networks.

[PBase](#) : Not the easiest on the eye but seems to have gained huge traffic since it was established in 1999. Very basic features and a huge member's forum.

[OrangePics](#) : A basic site that emphasizes ease of use and safety of your photos. Currently offering your first full year for free, after which is an annual charge of \$24.95.

[Phanfare](#) : Offers unlimited storage for a monthly fee of \$6.95 to host your photos and video clips. Also provides downloadable organisation software.

[SmugMug](#) : Really nicely designed site that offers accounts from \$59.95 per year with a free trial. The user galleries are nice to look at and you can include video in these.

[Dropshots](#) : Front end looks nice and clean and the features are up to scratch but viewing the sample gallery lets the site down - cluttered and ugly.

[Slide](#) : Another site that has taken advantage of myspace to create viral marketing. Users upload photos and create slideshows using the editor and then post them to their profile or blog etc. Controls are nice and easy to use, will do well unless myspace bring out their own slideshow tools.

[Photosite](#) : Provides photo sharing but you get the impression the site is more about selling prints and gifts than that. looks a touch too corporate although the drag and drop tools sound impressive.

[23HQ](#) : Nice site which provides completely free accounts, basic features such as galleries, tagging and photogroups; where you can form your own community of friends and chat and share each other's photos.

[Kodak Gallery](#) : Goes under the name of a photo sharing site but looks very corporate and set up to flog merchandise rather than provide a nice website experience.

[Zoto](#) : Nice site with good features such as geo-tagging, photo blogging and the usual community features such as browsing by interest. Free version with the option to upgrade to a pro account for \$24.95 per year.

[Snapfish](#) : Another corporate site run by Hewlett Packard, offers photo sharing and digital prints of your snaps.

[Flukiest](#) : Photo, Video and music sharing with the ability to upload via mobile phone or a personalised Flukiest email address.

[Imagestation](#) : Sonys photo sharing offering, much better looking the Kodaks or HPs. Usual features with printing options but also the ability to upload via your psp.

[PictureTrail](#) : Another site that is combining photo sharing and social networking. Provides myspace style customisable profiles and some nice flash widgets to create 3d cubes of your photos, heart shapes, slideshows, screensavers and loads more bits and bobs.

[Hello](#) : Great domain and Googles offering which is designed to work in tandem with their [picasa](#) image organising software which they acquired. Picasa is great piece of software and helps you find pictures you had long forgotten about. it seems that hello allows you to send images to your friends like and instant messenger or to your blogger blog.

[Parazz](#) : Parazz is a nifty looking site which offers drag and drop uploading, slideshow creation with the option to add a soundtrack, camera phone uploads and a colour theme editor. They provide a free version or pro version for \$29 a year.

[Zeec](#) : Clean looking site with nice user galleries, offers the choice of uploading via your pc or mac with their software or via mobile phone.

IMINT

GEOINT Online (A website that is unifying existing NGA web-based capabilities for online, on-demand discovery of and access to geospatial intelligence (GEOINT) content, services, expertise, and support. GEOINT Online is an element of the strategy to transform NGA from solely a product producer to a GEOINT Services Provider with integrated access to GEOINT content, services, expertise and support.)

Iranian Websites

Mashreghnews ("Mashreghnews" is closed to armed forces. High likely IRGC. Due to its extreme focus on "air" related stuff, it might be connected to a company or an institute that works for IRGC's Aerospace Forces. Iran has two military. Artesh, or "Army" is the one that is conventional with most personnel, limited political involvement and low technology. IRGC or Sepah, made after Iraq's attack to Iran from ordinary people to protect the "revolution" and then remained as a whole separate military figure. Army has an Air force, IIRAF. They are running the airplanes, specially F-14 Tomcats. Iran is the ONLY and largest owner of F-14s at the moment due to restrictions and also because of military ties of U.S. govt with Shah's Army before the Revolution. Back then, and even these days, Tomcats are stuff one can count on them. Army also has a Force name "Air Defense". These are the "S-300 bullshit" people who run Radars and surface to air offense. at IRGC side, they only have an Aerospace Force. While it has limited kid stuff planes, its focus is Missiles.) NOTE: Translating the site into English turns out to be very poor, however, with patience you can pick up enough key words to do follow up research <http://www.mashreghnews.ir/fa/news/156072/%D8%A7%D9%88%D9%84%DB%8C%D9%86-%DA%A9%D8%A7%D9%86%D8%AF%DB%8C%D8%AF%D8%A7%DB%8C-%D8%B1%DB%8C%D8%A7%D8%B3%D8%AA%E2%80%8C-%D8%AC%D9%85%D9%87%D9%88%D8%B1%DB%8C-%D9%85%D8%B4%D8%AE%D8%B5-%D8%B4%D8%AF>

Type link directly into URL box; clicking will not function <http://www.nogw.com/ilweapons.html>

Despite Israel's refusal to acknowledge its nuclear weapons status, its secret arsenal is an open secret that Israeli policy makers don't go out of their way to deny. From its beginnings in the mid-1960s, Israel's program has developed into one that rivals those of larger powers like France and Britain. Here, based on interviews with U.S. intelligence officials and nuclear experts, is a portrait of Israel's strategic weapons programs. <http://www.sweetliberty.org/issues/israel/strategic/index.shtml>

Click on a symbol or location for more about Israel's secret arsenal.

SPECIAL REPORT Mideast endgame: an interactive guide

Israel's Nuclear Facilities http://www.atomicarchive.com/Almanac/IsraeliFacilities_static.shtml

The following sites can be found in Google Earth or Bing Maps 3D by copying and pasting the latitudes and longitudes into the search box.

Negev Nuclear Research Center, Dimona

Negev Nuclear Research Center. Plutonium production and extraction facilities, along with other weapons-related infrastructure.

31.001504°N, 35.146723°E

Eilabun

Eilabun is Israel's second weapons storage facility. Tactical nuclear shells and land mines are among its contents.

32.760226°N, 35.412077°E

Kfar Zekharya

Suspected nuclear missile base and bomb storage storage facility.

31.766267°N, 34.88142°E

Nahal Soreq

Soreq is the equivalent of the U.S. national weapons laboratories. The lab handles weapons design and construction as well as research.

31.766267°N, 34.88142°E

Yodefath

Suspected nuclear weapons assembly facility.

32.85093°N, 35.27916°E

Tirosh

Reportedly one of two Israeli nuclear weapons storage facilities. It is speculated that that Tirosh is the strategic weapons storage site, while Eilabun is the tactical weapons storage site.

31.751963°N, 34.863524°E

Rafael

Rafael has been responsible for the actual assembly of Israeli nuclear weapons.

32.889534°N, 35.09119°E

Language/Web Site Translators Online (In Other Words)

The notion of 'foreign' languages is beginning to disappear, thanks to ongoing developments by the likes of Google and Facebook that help the thousands of languages across the world be less foreign and more accessible. How? By making language translation easier than ever. In light of the technological progress in translation software made over the last decade, we may very well be on the cusp of witnessing the majority of language barriers between people groups disappear.

Not only does that mean everyone will be able to speak their natural tongue, learning another language will be purely out of interest or linguistic study, not a degree requirement for students or mandatory continuing education for international business people.

http://singularityhub.com/2012/07/24/will-it-matter-if-we-speak-different-languages-in-the-future/?utm_source=feedburner&utm_medium=feed&utm_campaign=Feed%3A+SingularityHub+%28Singularity+Hub%29

Law Enforcement Intelligence Analysis Digital Library <https://sites.google.com/site/lawenforcementintelligence/>
ID This Person is a free website that was recently launched and is now being used in Illinois, Missouri, Tennessee, Kentucky and Ohio. The website is a new tool where law enforcement agencies post images of unknown suspects for the public to view. TIPs are sent via email to law enforcement and rewards are paid to those providing TIPs if they help an agency ID someone. Totally free service with no hidden fees, available to Law Enforcement throughout the US. <http://www.idthisperson.com/>

Library Resources

The Researching Librarian's Database Library. (Note: I cannot recall where I obtained the following database but I certainly cannot take credit for it. I selected several at random to see if they were still active and inputted keywords that returned good results.)

AATA Online: Abstracts of International Conservation Literature
<http://aata.getty.edu/NPS/>

"AATA Online is a comprehensive database of more than 100,000 abstracts of literature related to the preservation and conservation of material cultural heritage."
-- Title page

ACM Digital Library
<http://dl.acm.org/portal.cfm>

Freely searchable after a fairly painless registration. "As a service to the computing community, the Digital Library will continue to offer its search and bibliographic database resources to all

visitors, for free. All you need to do is register with us." -- Title page

AfricaBib
<http://www.africabib.org/>

Doing research on African libraries or librarianship? Definitely check here. "The site consists of two bibliographic databases covering Africana periodical literature (Bibliography of Africana Periodical Literature Database) and African Women's literature (African Women's Database). You will also find a comprehensive bibliography on women travelers and explorers to Africa (Women Travelers, Explorers and Missionaries to Africa: 1763-2000: A Comprehensive

English Language Bibliography)." -- "About" page

ALB 1876 : American Libraries before 1876
<http://www.princeton.edu/~davpro/databases/index.html>

Part of the Davies Project at Princeton University, this database contains "Research into the History of University Libraries in the United States and the History of their Collections." -Title Page

All Academic
<http://www.allacademic.com/>

"All Academic is an academic index. It is designed to provide scholars and researchers with useful on-line source information about scholarly works. . . . Links are direct from source citations to scholarly publications. All Academic catalogs free publications only! Links to commercial and fee based scholarly publications are not included in this database." -- "About" information

**American Library Association
Archives: Holdings Database**
<http://www.library.illinois.edu/archives/ala/holdings/>

"This website provides a searchable interface for the American Library Association Archives' 'control card' database. The system includes records for over 1,100 archives or manuscript collections which have been arranged according to the archival principle of provenance. Materials are arranged in a three-part classification scheme of record group, record sub-group, and record series." -- Title page

**Anthropological Index of the Royal
Anthropological Institute**
<http://lucy.ukc.ac.uk/AIO.html>

A small but surprising number of entries concerning libraries. "The Anthropological Index Online is based on the journal holdings of The Anthropology Library at the The British Museum (Museum of Mankind) which receives periodicals in all branches of anthropology, from academic institutions and publishers around the world." -- Title page

ARCHON Directory
<http://www.nationalarchives.gov.uk/archon/>

"The ARCHON Directory includes contact details for record repositories in the United Kingdom and also for institutions elsewhere in the world which have substantial collections of manuscripts noted under the indexes to the National Register of Archives." -- Title page

**arlis.net Periodicals Database (formerly
Union List of Art, Architecture and
Design Serials)**
<http://www.arlis.net/>

"The arlis.net service is designed to help users to locate art, architecture and design publications, plus related materials. The service currently consists of a database of periodical titles (or magazines / journals / serials), and a related directory of art library resources in general. " Click on the periodicals tab at the top of the page. -- "Introduction"**Bibliographic Database of the Conservation Information Network (BCIN)**
<http://www.bcin.ca/>

"The Bibliographic Database of the Conservation Information Network (BCIN) provides access to over 190,000 bibliographic citations for conservation literature. BCIN includes citations from the Art and Archaeology Technical Abstracts (prior to 1998), technical reports, conference proceedings, journal articles, books and audiovisual and unpublished materials. The database also includes previously unavailable material from private sources, as well as new information gathered by a worldwide network of contributors." -- "About BCIN" page

**Bibliographical Society of the
University of Virginia**
<http://bsuva.org/>

Of monumental importance, the first 51 volumes of **Studies in Bibliography**, offering a vast library of articles on bibliography and textual criticism, has been made available online by the Bibliographical Society. Also available are **Shakespearean Prompt-Books of the Seventeenth Century** and Emily Lorraine de Montluzin's **Attributions of Authorship in the Gentleman's Magazine** and **Attributions of Authorship in the European Magazine**.

**Book History Online: International
Bibliography of the History of the
Printed Book and Libraries**
<http://www.kb.nl/bc/abhb-en.html>

"Book History Online (BHO) is designed, managed, maintained and published by the Koninklijke Bibliotheek, National Library of the Netherlands, in co-operation with national committees in countries all over the world. BHO is a database in English on the history of the printed book and libraries. It contains titles of books and articles on the history of the printed book worldwide. It is based on ABHB, the *Annual Bibliography of the History of the printed Book and Libraries*." -- "Introduction" page

Book Search Mashup
<http://kokogiak.com/booksearch/>

This mashup created by Web developer, Alan Taylor at his site Kokogiak, lets you runs queries in Google Books, Amazon Search Inside/A9 and MSN Live Book simultaneously. Results appear side-by-side in 3 columns for quick comparison.

BookServer
<http://www.archive.org/bookserver>

"The BookServer is a growing open architecture for vending and lending digital books over the Internet. Built on open catalog and open book formats, the BookServer model allows a wide network of publishers, booksellers, libraries, and even authors to make their catalogs of books available directly to readers through their laptops, phones, netbooks, or

dedicated reading devices. BookServer facilitates pay transactions, borrowing books from libraries, and downloading free, publicly accessible books." -- Homepage

British Library Catalog
<http://catalogue.bl.uk/>

"This service provides simple searching and ordering of documents from the British Library's extensive collections." -- Homepage

British Library Manuscripts Catalog
<http://molcat.bl.uk/>

"This On-line Catalogue is designed to offer a single means of access to the mainstream catalogues of the Department of Manuscripts covering accessions from 1753 to the present day." -- "About" page

**British Official Publications
Collaborative Reader Information
Service (BOPCRIS)**
<http://www.southampton.ac.uk/library/du/projects.html>

"You can use this web site to search and browse information from British Official Publications over the period 1688-1995. You can also read abstracts, and view detailed consistent subject indexing, of key documents. You can then read the digitised full-text version of a limited number of these documents." -- Title page

C-SPAN Video Library
<http://www.c-spanvideo.org/videoLibrary/>

"The C-SPAN Archives records, indexes, and archives all C-SPAN programming for historical, educational, research, and archival uses. Every C-SPAN program aired since 1987, now totaling over 160,000 hours, is contained in the C-SPAN Archives and immediately accessible through the database and electronic archival systems developed and maintained by the C-SPAN Archives." -- About page

**Canadian Association of Research
Libraries Open Archives Metadata
Harvester**
<http://carl-abrc-oai.lib.sfu.ca/>

"Welcome to the Canadian Association of Research Libraries (CARL) Institutional Repositories Pilot Project Harvester. This Harvester is the search service for the CARL Institutional Repositories Pilot Project and aggregates material from each of the participating Canadian institutions, allowing users to seamlessly search all of the repositories at once, using one common point of access." -- About this Archive page

Catalogue of Digitized Medieval Manuscripts
<http://manuscripts.cmrs.ucla.edu/>

"The Catalogue of Digitized Medieval Manuscripts offers a simple and straightforward means to discover medieval manuscripts available on the web. Very much a work in progress, the database will initially provide links to hundreds of manuscripts, which we expect quickly to grow to thousands. Basic information about the manuscripts is fully searchable, and users can also browse through the complete contents of the database. As the project develops, a richer body of information for each manuscript, and the texts in these codices, will be provided, where available." -- About us page

Collection of Computer Science Bibliographies
<http://iinwww.ira.uka.de/bibliography/>

"This is a collection of bibliographies of scientific literature in computer science from various sources, covering most aspects of computer science. The about 1200 bibliographies are updated monthly from their original locations such that you'll always find the most recent versions here. The collection currently contains more than one million references (mostly to journal articles, conference papers and technical reports) and consists of 660 MBytes of BibTeX entries. More than 16000 references contain crossreferences to citing or cited publications. More than 100,000 references contain URLs to an online version of the paper. There are more than 2000 links to other sites carrying bibliographic information." -- Title page

COPAC
<http://www.copac.ac.uk/>

"COPAC provides FREE access to the merged online catalogues of 21 of the largest university research libraries in the UK and Ireland." -- Title page

Current Cites
<http://currentcites.org/>

"A team of librarians and library staff monitors information technology literature in both print and digital forms, each month selecting only the best items to annotate for a free publication. The resulting issue of 10-20 annotated citations of current literature is emailed to a mailing list and is redistributed on other electronic fora. The individual citations are also individually indexed so that you can dynamically create your own Bibliography On-Demand. The items that are freely available on the Internet are also retrieved and indexed so that you can perform an Article Search of the full-text of these items." -- Title page

DART-Europe E-theses Portal
<http://www.dart-europe.eu/basic-search.php>

"DART-Europe is a partnership of research libraries and library consortia who are working together to improve global access to European research theses." - Homepage

DataFerrett
<http://dataferrett.census.gov/>

"DataFerrett is a unique data mining and extraction tool. DataFerrett allows you to select a databasket full of variables and then recode those variables as you need. You can then develop and customize tables. Selecting your results in your table you can create a chart or graph for a visual presentation into an html page. Save your data in the databasket and save your table for continued reuse." - Homepage

DLIST - Digital Library of Information Science and Technology (University of Arizona)
<http://arizona.openrepository.com/arizona/handle/10150/105067>

"Established in 2002, DLIST, Digital Library of Information Science and Technology is a cross-institutional, subject-based, open access digital archive for the Information Sciences, including Archives and Records Management, Library and Information Science, Information Systems, Museum Informatics, and other critical information infrastructures. The dLIST vision is to serve as a dynamic archive in the Information Sciences, broadly understood, and positively impact and shape scholarly communication in our closely related fields." -- About page

Digital Collections Registry
<http://dlf.grainger.uiuc.edu/DLFCollectionsRegistry/browse/>

From the [Digital Library Federation](#). A searchable database of members' public domain, online digital collections.

Directory of Union Catalogs (IFLA)
<http://archive.ifla.org/VI/2/duc/index.htm>

"This Directory is a complete listing of all known current national union catalogues in the world, including monograph, serial and general union catalogues. In order for catalogues to be included, they must be both national (or international) and current. Closed catalogues and regional or local catalogues are not listed. Specific subject catalogues are included where known, as well as those with a general subject coverage." -- Title page

DLF Aquifer
<http://www.diglib.org/aquifer/>

From the [Digital Library Federation](#). "Our purpose is to promote effective use of distributed digital library content for teaching, learning, and research in the area of American culture and life. We support scholarly discovery and access by: Developing schemas, protocols and communities of practice to make digital content available to scholars and students where they do their work; Developing the best possible systems for finding, identifying and using digital resources in context by promoting digital library best practices and developing tools and services to improve digital resource access and use" -- Title page

E-LIS - The open archive for Library and Information Science
<http://eprints.rclis.org/>

"E-LIS is an open access archive for scientific or technical documents, published or unpublished, on Librarianship, Information Science and Technology, and related areas. E-LIS relies on the voluntary work of individuals from a wide range of backgrounds and is non-commercial. It is not a funded project of an organization. It is community-owned and community-driven. We serve LIS researchers by facilitating their self-archiving, ensuring the long-term preservation of their documents and by providing world-wide easy access to their papers." -- Title page

English Short Title Catalogue
http://estc.bl.uk/F/?func=file&file_name=login-bl-list

"The English Short Title Catalogue (ESTC) lists over 460,000 items: published between 1473 and 1800; mainly in Britain and North America; mainly, but not exclusively, in English; from the collections of the British Library and over 2,000 other libraries." -- Title page

ERIC Database
<http://www.eric.ed.gov/>

"The Education Resources Information Center (ERIC), sponsored by the Institute of Education Sciences (IES) of the U.S. Department of Education, produces the world's premier database of journal and non-journal education literature. The new ERIC online system, released September 2004, provides the public with a centralized ERIC Web site for searching the ERIC bibliographic database of more than 1.1 million citations going back to 1966. Effective October 1, more than 107,000 full-text non-journal documents (issued 1993-2004), previously available through fee-based services only, will be available for free." -- Title page

ERIC/AE Draft Abstracts
<http://ericae.net/sinprog.htm> -- No longer available (closed by U.S. Dept. of Education as of 12/09/03)

"Processing of an ERIC abstract typically takes six to nine months from the time we prepare an abstract to the final product appearing in *Resources in Education* or the *Current Index to Journals in Education*. To help you obtain the latest information on assessment and evaluation, we created this experimental database of our abstract drafts. We update this database every Thursday or Friday night. Since we usually prepare abstracts within 2 or 3 weeks of receiving the paper or journal, this information is very current." -- Title page

ERIC/AE Full Text Internet Library
<http://ericae.net/ftlib.htm> -- No longer available (closed by U.S. Dept. of Education as of 12/09/03)

Includes sections of full-text articles on educational quality, learning theory, evaluation, student evaluation, tests and testing, professional standards, research, and statistical analysis. Article example: [How to Write a Scholarly Research Report](#).

"Here you will find links to some of the best full-text books, reports, journal articles, newsletter articles and papers on the Internet that address educational measurement, evaluation and learning theory. We have selected these documents based upon criteria that are widely accepted in the library and information science community and we have provided a framework so that you can easily browse these resources." -- Title page

ERIC/IT Full Text Database
<http://www.ericit.org/fulltext.shtml> -- No longer available (closed by U.S. Dept. of Education as of 12/09/03)

"Search over 1,000 of the latest research reports, conference papers, opinion papers, selected articles and other ERIC documents in the fields of Library Science and Educational Technology and receive the documents in full text immediately." -- Title page

EdResearch
<http://cunningham.acer.edu.au/dbtw-wpd/sample/edresearch.htm>

The EdResearch Online database is housed [Acer Cunningham Library](#) and indexes over 13,800 education research articles, many of which have full-text available. The database is updated monthly.

FindArticles.com
<http://findarticles.com>

"FindArticles is a specialized search engine designed to help you quickly and easily find published articles on the topics that interest you. Our database has hundreds of thousands of articles from

more than 300 magazines and journals, dating back to 1998. FindArticles even brings some print-only publications to the Web for the first time." -- "Help" page

TheFreeLibrary.com
<http://www.thefreelibrary.com/>

"Since 2003, The Free Library has offered free, full-text versions of classic literary works from hundreds of celebrated authors, whose biographies, images, and famous quotations can also be found on the site. Recently, The Free Library has been expanded to include a massive collection of periodicals from hundreds of leading publications covering Business and Industry, Communications, Entertainment, Health, Humanities, Law, Government, Politics, Recreation and Leisure, Science and Technology, and Social Sciences. This collection includes millions of articles dating back to 1984 as well as newly-published articles that are added to the site daily." -- Homepage

getCITED
<http://www.getcited.org/>

"getCITED is a site that exists to facilitate the dissemination and discussion of academic research. It has numerous features, but at its core, it consists of two things: a database and a discussion forum. What makes getCITED's database truly unique is that it lets scholars and researchers decide what its content should be. What makes its discussion forum truly unique is the fact that, within the comments posted, you can create LINKS to PUBLICATIONS and IDENTITIES within the getCITED database." -- "About" page

Google Book Search
<http://books.google.com/>

The searchable interface for Google's mass book digitization project. page

GPO Access Browse Topics
<http://www.browsetopics.gov/>

"This service arranges U.S. Government sites by topic. The main list of topics is based upon the current Guide to U.S. Government Information, also known as The Subject Bibliography Index." -- Title page

GPO Access Multi-Database Search
<http://www.gpoaccess.gov/multidb.htm>

Useful for searching a variety of federal government publications for information pertaining to libraries. Includes the United States budget, Congressional bills, the *Congressional Record*, the *Federal Register*, public laws, and the *United States Code*, among other items.

GrayLIT Network - See [Science.gov](#)

HCI Bibliography: Human-Computer Interaction Resources
<http://www.hcibib.org/>

"The HCI Bibliography is a free-access online bibliographic database on Human-Computer Interaction. The basic goal of the Project is to put an electronic bibliography for most of HCI on the screens of all researchers, developers, educators and students in the field through the World-Wide Web and anonymous ftp access." -- "About" page

Index Translationum
<http://www.unesco.org/culture/xtrans/>

"INDEX TRANSLATIONUM data base contains cumulative bibliographical information about books translated and published in about a hundred of UNESCO Member States from 1979, totalizing some 1,300,000 notices in all disciplines: literature, social and human sciences, natural and exact sciences, art, history, etc." -- Title page

Infotrieve
<http://www.infotrieve.com/>

Many LIS journals are indexed in ArticleFinder, "Infotrieve's free-to-search proprietary bibliographic database containing over 22 million citations and over 10 million abstracts from more than 35,000 of the most important scholarly journals from fields such as medicine, biotechnology, science, engineering, and law." -- "About" page

Ingenta
<http://www.ingentaconnect.com/>

CARL UnCover is defunct, now incorporated into Ingenta. Free searching.

Internet Archive
<http://www.archive.org/index.php>

"The Internet Archive is building a digital library of Internet sites and other cultural artifacts in digital form. Like a paper library, we provide free access to researchers, historians, scholars, and the general public." -- IA Homepage

Internet Speculative Fiction Database
<http://www.isfdb.org/cgi-bin/index.cgi>

Hosted by the Cushing Library Science Fiction and Fantasy Research Collection and Institute for Scientific Computation at Texas A&M University, "The ISFDB is an effort to catalog works of Science Fiction, Fantasy, and Horror. It links together various types of bibliographic data: author bibliographies, publication bibliographies, award listings, magazine content listings, anthology and collection content listings,

yearly fiction indexes, and forthcoming books." -- Homepage

Intute

<http://www.intute.ac.uk/>

"Intute is a free online service providing you with access to the very best Web resources for education and research. The service is created by a network of UK universities and partners. Subject specialists select and evaluate the websites in our database and write high quality descriptions of the resources." -- Homepage

lexisONE

<http://law.lexisnexis.com/webcenters/lexisone/>

Provides full-text of case law (state and federal), legal forms, and a legal internet guide.

Library, Information Science & Technology Abstracts (LISTA)

<http://www.libraryresearch.com/>

"EBSCO Publishing is proud to provide the Library, Information Science & Technology Abstracts (LISTA) database as a free resource to anyone interested in libraries and information management. Delivered via the EBSCOhost platform, LISTA indexes nearly 600 periodicals plus books, research reports, and proceedings. With coverage dating back to the mid-1960s, it is the oldest continuously produced database covering the field of information science." -- EBSCO Free Databases page

LigerCat : Literature and Genomics Resource Catalogue

<http://ligercat.ubio.org/>

"LigerCat was created as part of the Biology of Aging project at the MBLWHOI Library at the Woods Hole Marine Biological Laboratory.

LigerCat is a search tool for NCBI's PubMed that uses tag clouds to provide an overview of important concepts and trends. LigerCat aggregates multiple articles in PubMed, summing their MeSH descriptors and presenting them in a cloud, weighted by frequency.

Medical Subject Headings (MeSH) is a large controlled vocabulary created and maintained by the National Library of Medicine to categorize and index journal articles in the life sciences. MeSH descriptors are akin to tags in a blog post, but scientific articles are tagged with MeSH descriptors by respected librarians and scientists.

In addition to providing a visual overview of a set of PubMed articles, LigerCat can

search PubMed in realtime. Simply click on one or more MeSH descriptors in a tag cloud to search PubMed for those terms instantly." -- About page

Medieval Feminist Index

<http://www.haverford.edu/library/refere/nce/mschaus/mfi/mfi.html>

Great for items about medieval books, libraries, etc., with a feminist slant. A quick test search turned up, among others, "A Library Collected by and for the Use of Nuns" and "Reassessing Women's Libraries in Late Medieval France." "The Medieval Feminist Index covers journal articles, book reviews, and essays in books about women, sexuality, and gender during the Middle Ages." -- "What is the MFI?" page

MagPortal

<http://www.magportal.com/>

Searches and returns full-text articles from web publications. Should prove useful for some topics.

National Criminal Justice Reference Service (NCJRS) Abstracts Database

<http://www.ncjrs.gov/abstractdb/search.asp>

Useful for prison librarianship research. "The National Criminal Justice Reference Service Abstracts Database contains summaries of more than 160,000 criminal justice publications, including Federal, State, and local government reports, books, research reports, journal articles, and unpublished research." -- Title page

National Union Catalog of Manuscript Collections (NUCMC)

<http://www.loc.gov/coll/nucmc/>

Provides access to the RLIN AMC (Archival and Mixed Collections) file and the OCLC bibliographic database describing archival and manuscript collections in public, college and university, and special libraries located throughout North America and around the world. "NUCMC, or the National Union Catalog of Manuscript Collections, is a free-of-charge cooperative cataloging program operated by the Library of Congress." -- Title page

Networked Digital Library of Theses and Dissertations (NDLTD)

<http://www.ndltd.org/>

The goals of the NDLTD are as follows: "To improve graduate education by allowing students to produce electronic documents, use digital libraries, and understand issues in publishing; to increase the availability of student research for scholars and to preserve it electronically; to lower the cost of submitting and handling theses and dissertations; to empower students to

convey a richer message through the use of multimedia and hypermedia technologies; to empower universities to unlock their information resources; to advance digital library technology." -- Title page

NewspaperCat : Catalog of Digital Historical Newspapers

<http://www.newspapercat.org/>

"The Catalog of Digital Historical Newspapers (NewspaperCat) is a tool that facilitates the discovery of online digitized historical newspaper content from newspapers published in the United States and the Caribbean. NewspaperCat was funded by a grant from the George A. Smathers Libraries.

Search by keyword, newspaper title or by city, county or state to locate titles. From your search result, click on the link(s) to connect to the digital newspaper(s). In many cases, this content is keyword searchable, depending on the hosting organization.

NewspaperCat currently links to over 1000 full-text newspaper titles with a goal to include links to as many US and Caribbean newspapers with archival digital content as possible. Plans are to expand the Catalog as newly digitized newspaper titles are located." -- Title page

OAister

<http://www.oclc.org/oaister/>

"OAister is a Mellon-funded project of the University of Michigan Digital Library Production Services. Our goal is to create a wide-ranging collection of free, useful, previously difficult-to-access digital resources that are easily searchable by anyone." -- Title page

OpenDOAR: Directory of Open Access Repositories

<http://www.opendoar.org/>

"The OpenDOAR service is being developed to support the rapidly emerging movement towards Open Access to research information. This will categorise and list the wide variety of Open Access research archives that have grown up around the world." -- Title page

Open Access Directory

http://oad.simmons.edu/oadwiki/Main_Page

"The Open Access Directory (OAD) is a compendium of simple factual lists about open access (OA) to science and scholarship, maintained by the OA community at large. By bringing many OA-related lists together in one place, OAD will make it easier for everyone to discover them and use them for reference. The easier they are to maintain and discover, the more effectively they can spread

useful, accurate information about OA. " -- Title page

Public Library Geographic Database (PLGDB) Map
<http://www.geolib.org/PLGDB.cfm>

"The database includes the locations of America's 16,000 public libraries, population characteristics from the US Census that best describe people that use libraries, and library use statistics from the National Center for Educational Statistics. " -- Homepage

PQDT Open
<http://pqdtopen.proquest.com/>

"PQDT Open provides the full text of open access dissertations and theses free of charge.

You can quickly and easily locate dissertations and theses relevant to your discipline, and view the complete text in PDF format." -- About page

PubMed (MEDLINE, etc.)
<http://www.ncbi.nlm.nih.gov/entrez/>

Very useful for researching medical library topics, information use in the health care industry, and so on. *Bulletin of the Medical Library Association, Health Libraries Review, and Hospital Libraries* are included among journals indexed. "PubMed provides access to bibliographic information, which includes MEDLINE as well as the out-of-scope citations (e.g., articles on plate tectonics or astrophysics) from certain MEDLINE journals, primarily general science and chemistry journals, for which the life sciences articles are indexed for MEDLINE; citations that precede the date that a journal was selected for MEDLINE indexing; some additional life science journals that submit full text to PubMedCentral and receive a qualitative review by NLM." -- "Overview" page

RAMBI: The Index of Articles on Jewish Studies
<http://jnul.huji.ac.il/rambi/>

If you're researching Jewish libraries, their materials, etc., this catalog is a wonderful resource. "RAMBI - The Index of Articles on Jewish Studies - is a selective bibliography of articles in the various fields of Jewish studies and in the study of Eretz Israel. Material listed in Rambi is compiled from thousands of periodicals and from collections of articles - in Hebrew, Yiddish, and European languages- mainly from the holdings of the Jewish National and University Library, a world center for research on the Jewish people and Eretz Israel. The main criterion for inclusion in the bibliography is that the article be based on scientific research, or contain

important information for such research." - "About" page

Reference Reviews Europe Online
<http://rre.casalini.it/>

"Over 1000 European reference book reviews online, full-text searchable, updated quarterly." -- Title page

refseek
<http://www.refseek.com/>

"Currently in public beta, RefSeek is a web search engine for students and researchers that aims to make academic information easily accessible to everyone. RefSeek searches more than one billion documents, including web pages, books, encyclopedias, journals, and newspapers. RefSeek's unique approach offers students comprehensive subject coverage without the information overload of a general search engine—increasing the visibility of academic information and compelling ideas that are often lost in a muddle of sponsored links and commercial results." -- About page

ResearchIndex
<http://citeseer.ist.psu.edu/index.jsp>

"ResearchIndex is a digital library that aims to improve the dissemination, retrieval, and accessibility of scientific literature. Specific areas of focus include the effective use of web, and the use of machine learning The ResearchIndex project encompasses many areas including the location of articles, full-text indexing of the articles, autonomous citation indexing, reference linking, information extraction, display of query-sensitive summaries, extraction of citation context, distributed error correction, related document detection, and user profiling." -- "Welcome" page

Science Fiction and Fantasy Research Database
<http://sffrd.library.tamu.edu/>

"The Science Fiction and Fantasy Research Database is an on-line, searchable compilation and extension of Science Fiction and Fantasy Reference Index 1878-1985, Science Fiction and Fantasy Reference Index 1985-1991, and Science Fiction and Fantasy Reference Index 1992-1995, including material located since publication of the last printed volume." -- Introduction

Science.gov
<http://www.science.gov/>

"Science.gov is a gateway to over 50 million pages of authoritative selected science information provided by U.S. government agencies, including research and development results." -- Home page.

This database includes Office of Scientific and Technical Information's (OSTI) GrayLIT Network.

ScientificCommons.org
<http://www.scientificcommons.org/>

"The major aim of the project is to develop the world's largest communication medium for scientific knowledge products which is freely accessible to the public. ScientificCommons.org is a project of the University of St.Gallen (Switzerland) and hosted and developed at the Institute for Media and Communications Management." -- About ScientificCommons.org

Scirus
<http://www.scirus.com/>

This search engine retrieves a surprising number of articles from library and information science journals, in addition to relevant web sites. "Responding to the need for focused, comprehensive and reliable overviews of relevant scientific information, Elsevier Science has developed the powerful Internet search tool Scirus. Scirus distinguishes itself from existing search engines by concentrating on scientific content only and by searching both Web and membership sources." -- "About" page

TechRepublic's White Paper Search
<http://www.techrepublic.com/whitepapers>

"TechRepublic® provides IT professionals a valuable technical content resource dedicated to meeting their day-to-day demands for timely and relevant Information Technology-focused knowledge and insight." -- "CNET Networks" page

TRAIL - Technical Report Archive and Image Library
<http://dicoll.manoa.hawaii.edu/techreports/index.php?c=1>

The Greater Western Library Alliance (GWLA) and the Center for Research Libraries (CRL) bring us "a collaborative project to digitize, archive, and provide persistent and unrestricted access to federal technical reports issued prior to 1975." -- Homepage

UNESDOC: UNESCO Full Text Documents
<http://unesdoc.unesco.org/ulis/>

Provides access to full-text documents published by UNESCO, many on issues related to library and information science, such as copyright, access to information, and so on. Note that documents are in PDF format, which requires the free **Adobe Acrobat Reader**.

Lone Wolves

Lone wolves: myth or reality (Lone wolves: myth or reality is a new report from Searchlight that examines the question of whether extreme-right terrorists are isolated individuals – lone wolves – or are

connected with and the inevitable consequence of the activities of the various far-right, often small, organisations that espouse a violent racist and fascist ideology.

The project and report arose out of the work of Gerry Gable in gathering and analysing intelligence on the extreme right since May 1964 and his later work as an independent adviser on race hate crime to the Metropolitan Police Service. The report includes case studies of nearly 40 individuals holding far-right political views who have been convicted for serious violence or terrorist offences. It concludes that they were motivated, and obtained the knowledge and means to carry out their acts, through dangerous, far-right networks that introduced them to a perverse ideological world. The report demonstrates conclusively that far-right terrorists are not lone wolves but are connected with a number of insidious organisations.) Download Report at

Major Commands (MACOMS)

Unified Command Plan 2011 - The Department of Defense updated the Unified Command Plan, a key strategic document that establishes the missions, responsibilities, and geographic areas of responsibility for commanders of combatant commands. UCP 2011, signed by President Obama on April 6, 2011, assigns several new missions to the combatant commanders.

Every two years, the Chairman of the Joint Chiefs of Staff is required to review the missions, responsibilities, and geographical boundaries of each combatant command and recommend to the President, through the Secretary of Defense, any changes that may be necessary.

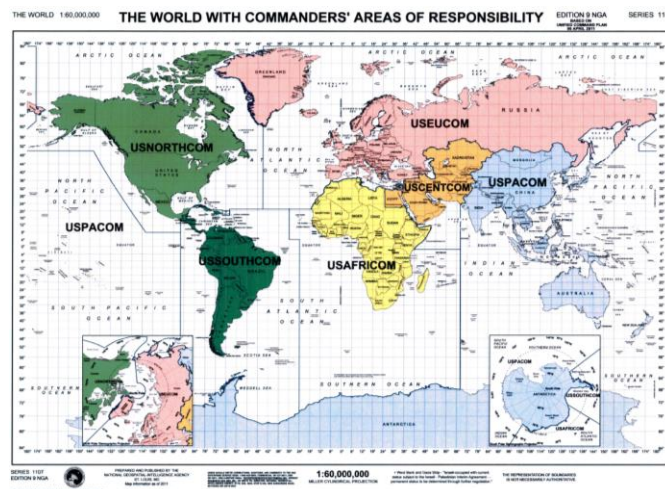

Significant changes made by UCP 2011 include:

- Shifting AOR boundaries in the Arctic region to leverage long-standing relationships and improve unity of effort.
- Giving U.S. Northern Command responsibility to advocate for Arctic capabilities.
- Codifying the President's approval to disestablish U.S. Joint Forces Command.
- Expanding U.S. Strategic Command's responsibility for combating weapons of mass destruction and developing Global Missile Defense Concept of Operations.
- Giving U.S. Transportation Command responsibility for synchronizing planning of global distribution operations.

The UCP 2011 continues to support U.S. defense security commitments around the world while improving military responsiveness to emerging crises.

Marine Corps

One-Eight Basetrack is an experimental media project, tracking the deployment of 1/8 – 1st Battalion, Eighth Marines, throughout the duration of their deployment to southern Afghanistan. A small team of mobile media operators is embedded with the battalion, transmitting their reports and reflections from Helmand province as they travel across the battalion's area of operations.

http://googlemapsmania.blogspot.com/2011/08/follow-eighth-marines-on-google-maps.html?utm_source=feedburner&utm_medium=feed&utm_campaign=Feed%3A+GoogleMapsMania+%28Google+Maps+Mania%29

Medical Intelligence

COREMINE Medical Health Line	http://www.coremine.com/medical/#search http://www.healthline.com/
Health Map (HealthMap, a team of researchers, epidemiologists and software developers at Boston Children's Hospital founded in 2006, is an established global leader in utilizing online informal sources for disease outbreak monitoring and real-time surveillance of emerging public health threats. The freely available Web site 'healthmap.org' and mobile app 'Outbreaks Near Me' deliver real-time intelligence on a broad range of emerging infectious diseases for a diverse audience including libraries, local health departments, governments, and international travelers. HealthMap brings together disparate data sources, including online news aggregators, eyewitness reports, expert-curated discussions and validated official reports, to achieve a unified and comprehensive view of the current global state of infectious diseases and their effect on human and animal health. Through an automated process, updating 24/7/365, the system monitors, organizes, integrates, filters, visualizes and disseminates online information about emerging diseases in nine languages, facilitating early detection of global public health threats.)	http://www.healthmap.org/en/

Military Magazines

Air Force Link

Official U.S. Air Force site featuring news, video, photos, career information, and comprehensive general information library.

All Military Weapons

Website providing information about all kinds of military weapons from around the world.

Army Magazine

Focuses on the activities of the U.S. Army worldwide and provides articles for a professionally oriented audience.

Army Technology

Website for the defence industries.

Blackanthem.com

Independent site offering a selection of military news that normally is not found in the mainstream media.

Canadian Military Journal

Official professional magazine of the Canadian Forces and the Department of National Defence.

Defense-Aerospace

France-based aerospace, defense and military news and information site.

Defense Daily Network

Defense industry news, analysis and business information.

Defense Media Network

Military news and history regarding the air force, navy, army and special operations.

Defense News

Find late-breaking defense news from the leading defense news weekly.

Defense Update

International magazine providing news and information about new systems and military export, covering primarily Israeli industries.

Defense World

Features defense market news analysis, contracts & procurements news, defence market research.

Eye Spy

Magazine covering intelligence, espionage, and covert operations.

Federation of American Scientists (FAS)

Covers wide range of military topics and hosts various organization's projects such as

Biological Weapons, CyberStrategy, Military Analysis, Nuclear Weapons, and more.

G2mil

Independent military magazine covering technology, weapons, tactics, future warfare, and military news.

Jane's Information Group

Premier source for defense and geopolitics news and information. Full articles available only for subscribers.

Leatherneck

Magazine of the Marines covering their operations, equipment, training, and history.

Military Information Technology

Features network centric warfare, information assurance, networking, tactical communications, rugged computers, video conferencing and more.

Military Medical Technology

Provides reports on the latest in NBC detection, telemedicine, pharmacy issues, and battlefield medical devices and simulation.

[Military Times](#)

Entryway to several military magazines:

[Air Force Times](#)

[Army Times](#)

[Marine Corps Times](#)

[Navy Times](#)

[MilitarySpot.com](#)

Military news and information portal.

[Pilots and Planes Military](#)

Fully digital military aircraft magazine.

[Popular Mechanics - Defense](#)

Articles covering military technology, history, and weapons.

[Soldier of Fortune](#)

Selected articles from infamous magazine covering military and intelligence operations from around the globe.

[Soldiers for the Truth \(SFTT\)](#)

Grass-roots organization of veterans seeking to inform the American public on the decline in readiness of armed forces. Produces online magazine DefenseWatch.

[Space War](#)

Daily news about military-space and nuclear-weapon technology and policy.

[Special Operations.Com](#)

Unofficial US special operations site.

[Strategy Page](#)

Covers current military technology trends, conflicts in all arenas of the world, military policy and intelligence.

[Stratfor](#)

Provides strategic intelligence on global business, economic, security, geopolitical affairs and military developments.

[War Times Journal](#)

Free access online magazine covering all periods of military history and military science. Presents articles and archives relating to wars, with an emphasis on eyewitness accounts and personal experiences.

Multimedia: North Korea in 2011 To coincide with the launch of our new blog on North Korea, Crisis Group has produced a multimedia presentation that looks at the history and current state of the "Hermit Kingdom". The presentation features an audio slideshow with fascinating and rare pictures from inside North Korea and commentary by Daniel Pinkston, Crisis Group's North East Asia Deputy Project Director. You can also explore the country's history, economy and military through background texts, interactive timelines and maps.

<http://sourcesandmethods.blogspot.com/2008/01/bahraini-foreign-minister-speaks-iiss.html>

This is a website that describes various terrorist groups of the world. It lists their known activities, their strength, location/area of operation and external aid. It is part of the SITE Institute's website that documents and tracks terror-related violence and "extremist websites, public records, and international media reports" to establish "links among terrorist entities and their supporters." Site features links to news, background on terrorist groups, material about court cases, and audio and video clips. Some material in other sections of the site available for a fee. Publisher: SITE Intelligence Group.

Open Source Intelligence Support

National Virtual Translation Center (The National Virtual Translation Center (NVTC) was established in February, 2003 " for the purpose of providing timely and accurate translations of foreign intelligence for all elements of the Intelligence Community.) <http://www.nvtc.gov/>

Open Source Intelligence Tools

Please note even though the aim is to provide information for free OSINT Tools, some may require a subscription or commercial fee. It's not listed, but of course popular Social Networks such as Facebook, Twitter, LinkedIn and alike have a wealth of information. Of course also consider older sources that are now less popular, it's amazing what people leave behind on stuff like MySpace. Also remember that search engines show you stuff thats popular, not perhaps the obscure stuff you are searching for, so get creative with your search queries and use the various tools at your disposal.

Lastly I will add alot of Social Engineers dont have alot of global exposure, so do your homework of where you are targeting. If you are targeting Japan for example their number 1 Social Network is not Facebook, so you need to do recon in the right places, and put in the extra legwork to gain the relevant access. Source: Dale Pearson

<http://www.subliminalhacking.net/2012/12/27/osint-tools-recommendations-list/#comments>

[Spokeo](#) - People search engine and free white pages finds phone, address, email, and photos. Find people by name, email, address, and phone for free.

[theHarvester](#) - This tool is intended to help Penetration testers in the early stages of the penetration test in order to understand the customer footprint on the Internet. It is also useful for anyone that wants to know what an attacker can see about their organization.

[Foca](#) - FOCA 3.2 Free is a fingerprint and information gathering tool for pentesters. It searches for servers, domains, URLs and public documents and print out discovered information in a network tree. It also searches for data leaks such as metadata, directory listing, unsecure HTTP methods, .listing or .DS_Store files, actived cache in DNS Servers, etc...

[Shodan](#) - Search for computers based on software, geography, operating system, IP address and more

[Maltego](#) - Maltego is a unique platform developed to deliver a clear threat picture to the environment that an organization owns and operates. Maltego's unique advantage is to demonstrate the complexity and severity of single points of failure as well as trust relationships that exist currently within the scope of your infrastructure.

[Deep Magic](#) - Search for DNS records and other fun stuff

[Jigsaw](#) - Jigsaw is a prospecting tool used by sales professionals, marketers and recruiters to get fresh and accurate sales leads and business contact information.

[Hoovers](#) - Search over 85 million companies within 900 industry segments; Hoover's Reports Easy-to-read reports on key competitors, financials, and executives

[Market Visual](#) - Search Professionals by Name, Company or Title

[FoxOne Scanner](#) - Non- Invasive and Non-Detectable WebServer Reconnaissance Scanner

[Creepy](#) - creepy is an application that allows you to gather geolocation related information about users from social networking platforms and image hosting services.

[Recorded Future](#) - Recorded Future intelligence analysis tools help analysts understand trends in big data, and foresee what may happen in the future. Groundbreaking algorithms extract temporal and predictive signals from unstructured text. Recorded Future organizes this information, delineates results over interactive timelines, visualizes past trends, and

maps future events— all while providing traceability back to sources. From OSINT to classified data, Recorded Future offers innovative, massively scalable solutions.

[MobiStealth](#) - Mobistealth Cell Phone Spy Software empowers you to get the answers you truly want and deserve. Including a host of advanced surveillance features, our Cell Phone Spy Software secretly monitors all cell phone activities and sends the information back to your Mobistealth user account.

[Snoopy](#) - Snoopy is a distributed tracking and profiling framework

[Stalker](#) - STALKER is a tool to reconstruct all captured traffic (wired or wireless alike) and parse out all of the "interesting" information disclosures. It goes beyond just grabbing passwords and emails out of the air as it attempts to build a complete profile of your target(s). You would be amazed at how much data you can collect in 15 minutes.

[LinkedIn Maps](#) - Your professional world. Visualized. Map your professional network to understand the relationships between you and your connections

[LittleSis](#) - LittleSis is a free database of who-knows-who at the heights of business and government.

[Entity Cube](#) - EntityCube is a research prototype for exploring object-level search technologies, which automatically summarizes the Web for entities (such as people, locations and organizations) with a modest web presence.

[TinEye](#) - TinEye is a reverse image search engine built by Idée currently in beta. Give it an image and it will tell you where the image appears on the web.

[Google Hacking DB](#) - Google Search Query Fu to find the secret sauce

[ServerSniff](#) - ServerSniff.net – Your free "Swiss Army Knife" for networking, serverchecks and routing with many many little toys and tools for administrators, webmasters, developers, powerusers and security-aware users.

[MyIPNeighbours](#) - My IP Neighbors lets you find out if any other web sites ("virtual hosts") are hosted on a given web server.

[Social Mention](#) - Social Mention is a social media search engine that searches user-generated content such as blogs, comments, bookmarks, events, news, videos, and more

[Glass Door](#) - Search jobs then look inside. Company salaries, reviews, interview questions, and more – all posted anonymously by employees and job seekers.

[NameCHK](#) - Check to see if your desired username or vanity url is still available at dozens of popular Social Networking and Social Bookmarking websites.

[Scythe](#) - The ability to test a range of email addresses (or account names) across a range of websites (e.g. social media, blogging platforms, etc...) to find where those "targets" have active accounts.

[Recon-NG](#) - A nice Python Script that automates recon on LinkedIn, Jigsaw, Shodan and some search engine fu.

[Pushpin](#) - Awesome little Python script that will identify every tweet, flicker pic and Youtube video within an area of a specific Geo address.

[Silobreaker](#) - Enterprise Semantic Search Engine, allows virtualisation of data, analytics and exploration of key data.

[Google Trends](#) - See what are the popular related topics people are searching for. This will help widen your search scope.

[Google Alerts](#) - Google Alerts are email updates of the latest relevant Google results (web, news, etc.) based on your queries.

[Addict-o-matic](#) - Nice little search aggregator. Allows you to enter a search term and build a page from search and social networking sites.

[PasteLert](#) - PasteLert is a simple system to search pastebin.com and set up alerts (like google alerts) for pastebin.com entries. This means you will automatically receive email whenever your term(s) is/are found in new pastebin entries!

[Kurrently](#) - Real Time Search Engine for Social Media.

[CheckUsernames](#) - Check for usernames across 160 Social Networking Sites.

[Whos Talkin](#) - social media search tool that allows users to search for conversations surrounding the topics that they care about most.

[192](#) - Search for People, Businesses and Places in the UK.

[Esearchy](#) - Esearchy is a small library capable of searching the internet for email addresses. It can also search for emails within supported documents.

[TouchGraph SEO](#) - Java based tool for importing and visualising various data types.

Open Source Intelligence Training

Department Of Homeland Security (requires password)

I have nothing but good things to say about these folks; they provide a superb service. I have taken all the courses below to include several webinar training sessions and I highly recommend them to the serious open source analyst.

INSCOM Intelligence Analyst Training Program

<http://www.linkedin.com/in/osint>

<http://opensourceintelligencetraining.com/index.htm>

<https://www.us.army.mil/suite/portal/index.jsp>

The idea with this training course is to help students understand how to gain intelligence on people or organizations using Internet based open source intelligence. Although the course is presented by Paterva the course does not center just on Maltego technology. The training course focuses on the underlying technology and techniques and tries to give students insight in how the tool collects and correlates the information.

<http://www.paterva.com/web4/index.php/services>

OSINT Exploitation and The Criminal Threat

First off let me state that no self respecting criminal would be without a wireless connection and all the apps that go with it.

This section is devoted to technology that is very easily exploitable by criminals. I use the word “criminal” as an umbrella term for anything from gangs to terrorists, human/drug/weapon smugglers to burglars, and anything in between. In other words, it is all-encompassing. It is not difficult to think like a criminal; all of us have at some point thought about doing something cruel. But for the most part we do not carry out our thoughts into action because we are law abiding citizens and we are rational people. Think about the time when a neighbor, a friend, girlfriend, boyfriend, or relative did something to displease us. Human nature, and psychology, says get even and do something back. But again, we are rational people. What I am trying to drive here is the point that all of us are capable of evil thought and it does not matter who we are. We just don’t admit to it. Remember Jimmy Carter and lust; not necessarily evil though. How about Bill Clinton and “I did not inhale “. They admitted to things in the hope that by doing this they would get positive results but instead those innocent comments came back to haunt them and they became the butt end of jokes. So, go ahead! Think like a human or drug smuggler. Think like a terrorist. Think like a gang banger. Think like a drug cartel boss. But most of all think! How can I exploit technology to further my criminal enterprise? By doing this brand of thinking you help law enforcement counter the threat whatever it may be or at least make them aware of the type of countermeasures to employ.

Why is it that most of the OSINT discussions are held behind firewalls and there is a requirement for passwords to access the subject? No, enough! I am going out on a limb and invite all to it. What a contradiction in terms. Open source but yet very hush, hush. We are not fooling anyone. Even criminals know how to exploit open source information and create intelligence from it. When I told a good friend of mine of what I intended to do, this is what he had to say. “We are not dealing with ignorant or stupid people. These people come from our professions, the computer industry, are computer engineers, etc. If you check open source you will see the bad guys asking for people with these skills. Not putting the information out in the open or in a book because the bad guys will find out and use it is only for those that are new to the game, do not understand the criminal element or their MO. In addition not having this information will hinder us as the new people to the game may not even know we know... Bad guys leave trails when they get sloppy and they do.”

Personal Drones: When and where does it end? That is, making it easier for the enemy. Let’s go beyond celebrity stalking and spying on your neighbors. Drug Cartels, human and drug smugglers are always on the lookout for anything that will make their activities more successful. Let’s role play: I am a smuggler (humans or drugs) and I have lookouts on high hills overlooking the border fence reporting activities back to me, however, they are static and cannot maneuver from their high points. I can utilize drones to hover over the fence/border for 360 degree coverage. I can see where the Border Patrol vehicle is on the other side of the fence; something my lookout even on a high point cannot observe. I can also determine how long it takes for the patrol to make a round of the area. What else can I make out? What they look like and now I can make contact with them when they are off duty for possible bribery. The options are without limits. I have millions at my disposal. I will buy several for the kids along the border to enjoy flying while I interleave my own surveillance drone into the mix. I could also land mine on the other side to lay in wait and observe. Granted the batteries do not last long but I don’t need that much

downtime. As soon as I observe what I need, I can bring my craft back over the fence and send another to lie in wait or do other types of collection. I can hire techies and have them experiment with the drones to extend their range and battery life. Does it sound far fetched? I don't think so.

Pandora's Box

<http://www.dailymail.co.uk/sciencetech/article-1327343/Personal-recreation-drones-developed.html>
<http://robotrule.com/html/ar-parrot-drone.php?ref=drone1#video>

When The Drones Come Marching In

<http://techcrunch.com/2011/01/29/drones/#>

The Nano Humminbird

<http://www.avinc.com/>
<http://www.engineeringtv.com/video/AeroVironment-Wasp-and-Switchbl>

Smartphone Applications

Now here are two apps no self respecting terrorist or smuggler should be without; Compass and GpsCompassMap. My intentions are not of sounding heartless or to delve into the macabre but rather to point out the control criminals obtain with this technology. The following examples deal mostly with Google Earth and how it has been utilized by terrorists. With the newer applications one does not need the desktop or laptop computer but a simple smartphone with all the bells and whistles of a regular CPU. The other advantage is that you do not leave as large an electronic footprint. The smartphone GPS is turned on as needed to avoid detection. There are other ways also.

No doubt you have heard or read about Iraqi insurgents having Google Earth imagery of British military bases (<http://news.nationalgeographic.com/news/2007/03/070312-google-censor.html>).

There are indications that the gunmen who stormed Mumbai on November 26, and the people who trained them, were technically literate. The group appears to have used complex GPS systems to navigate their way to Mumbai by sea. They communicated by satellite phone, used mobile phones with several different SIM cards, and may have monitored events as the siege unfolded via handheld Blackberry web browsers

(http://technology.timesonline.co.uk/tol/news/tech_and_web/the_web/article5311241.ece).

Israel's fears in regards to Google Earth's satellite imaging tools have come to fruition. Members of Palestine's al-Aqsa Martyrs Brigade, a group aligned with the Fatah political party, has admitted to using Google Earth for mapping targets for rocket strikes. Khaled Jaabari, the group's commander, has said that they are using Google Earth images to check details against their own maps in order to find sensitive areas that are vulnerable to strikes (<http://mashable.com/2007/10/25/missile-attacks-israel-google-earth/>).

Compass – I have tried this one and although still a little quirky it gives GR8 results. I can just begin to imagine the ways a criminal can put this technology to use. It is accurate when it comes to the coordinates and addresses. I cross referenced it with Google Earth, also on my smartphone, and it is right on. Using those two in concert give excellent results. Very handy for a criminal away from built up areas where all they want are coordinates that can be saved and returned to at a later date. I think you get my implication here.

GpsCompassMap – Another great little app. Combine Google Earth, Compass and this one and you have some power at your disposal. This one could replace Compass altogether but the more apps to cross check for accuracy, the better. Criminals are sure to fall in love with this one. It is extremely accurate. Went home for lunch and adjusted all the settings for the round-trip. It tells how many satellites are available and the number it is taking advantage of. Speed (miles, kilometers, knots, etc) of vehicle is very accurate as I compared it to my speedometer. As you leave the departure point the screen adjusts to show the entire track and at the end shows distance traveled. Geo coordinates which change according to location are a great feature. Superb tool for smugglers on the Southwest (Arizona/Mexico) Border, but that's as far as I go with how to use it.

Untraceable Encrypted Blackberrys - Mexico has no reliable register of handsets, mobile numbers, or users. Vendors are unregistered and sell the phones and SIM cards for cash, no questions asked. In other words, the cartels have nothing to worry about until such a time that Mexico makes strides to establish an official registry. (<http://www.theage.com.au/national/bikies-trafficking-in-data-secrecy-using-mexican-blackberrys-20110205-1aht9.html>)

Operations Security (OPSEC)

OPSEC Awareness for Military Members, DoD Employees and Contractors (This is an interactive web-based course that provides OPSEC awareness for military members, government employees, contractors and dependents. The course provides information on the basic need to protect unclassified information about operations and personal information to ensure safe and successful operations and personal safety. The course includes a printable certificate which can serve as evidence that a student completed the course. When a student takes the course using this link, DSS will not maintain any record of that student by name or any personally identifiable information. If the student needs documentation that he or she has completed the course he or she will have to print the certificate at the end of the course.) The course may take a few minutes for the initial download on slow internet connections. This training will take approximately 45 minutes to complete.

<http://cdsetrain.dtic.mil/opsec/index.htm>

Government contractor Frazier-Masonry provides detailed photographs of some of their contract work. Clients include Navy SEALs, NCIS, Marine Corp Special Operations Command West, EOD and various other agencies in and around Southern California. The work of these mostly U.S. Navy agencies is highly sensitive and the release of such photos, which reveal location, building lay-out and structural nature is a serious violation of Operational Security(OPSEC). Posted on social networking site.

Resources For Online Investigators (courtesy Toddington International)

<http://www.uvr.com> - UVRX Social Search: Search social media sites, including Facebook, Twitter, MySpace and LinkedIn

<http://www.keek.com> - The Twitter of video? Keek lets users send and watch short video clips with 111 character descriptions

<http://www.lucidchart.com> - Collaborative flow chart maker with some potential for intelligence analysis

<http://www.fixtracking.com> - "How-to stop getting tracked in your Browser" courtesy of

<http://duckduckgo.com>

<http://www.twitonomy.com> - Tool that allows real-time monitoring of Twitter conversations by keywords, users or lists

<http://www.weknowwhatyouredoing.com> - Social network privacy experiment drawing public information from Facebook and Foursquare

<http://www.tweetping.net> - Map display that shows global Twitter activity in real time. Fascinating.

<http://www.netcomber.com> - Interesting site finding non-obvious relationships that may link various websites to a common owner

<http://www.worldbrainthefilm.com> - "Google and the World Brain", an upcoming documentary on Google's efforts to scan the world's books

<http://www.downrightnow.com> - Status alerts for various web services generated via user reports and official announcements

<http://www.giphy.com> - Search engine for animated GIFs

<http://www.base-search.net> - Bielefeld Academic Search Engine, searches more than 40 million documents from over 2,400 sources

http://www.nirsoft.net/utils/wireless_network_watcher.html - Wireless Network Watcher, free utility that displays computers & devices connected to your WiFi network

<http://www.allmytweets.net> - Enter a user name and get that account holder's last 3,200 tweets all on one page

<http://www.veooz.com> - Free sentiment analysis tool that pulls data from various social media platforms

<http://www.safestyle-windows.co.uk/secret-door/> - Takes you to random places around the world via Street View (careful, this can be addictive)

<http://www.coccoc.com> - Search engine specific to Vietnam, indexing some 2 billion in-country pages

<http://www.answerpot.com> - Comprehensive and searchable mailing list archive

<http://www.here.com> - Mapping site (and app) from Nokia that effectively competes with Google Maps

<http://www.picsearch.com> - Image search site with an index of some 3 billion pictures

<http://www.privacyfix.com> - PrivacyFix for Firefox lets you control your online privacy by "calculating" your online exposure

<http://www.twocation.com> - Site that lets you see the geographic locations of your Twitter followers

<http://www.mind42.com> - Collaborative, browser-based online mind mapping tool

<http://www.readnotify.com> - Free tool for tracking when an email or document is sent, received, opened or forwarded

<http://www.werelate.org> - Locate individuals and their relatives on WeRelate, "the world's largest genealogy wiki"

<http://www.encryptur.com> - Ensure your online files are protected with this online file encryption tool

<http://www.digitalquick.com> - New Dropbox encryption service providing US government standard encryption - <http://goo.gl/Hb8QV>

<http://www.tools.meraki.com/stumbler> - View your wifi network neighbourhood (including channels & MAC addresses) using this free web-based tool

<http://www.kurrently.com> - Search social media networks for real-time results and monitor live events

<http://www.whostalkin.com> - Find out what topics are relevant and trending on social media with this conversation search tool

<http://www.recordedfuture.com> - Collects, organizes, and analyzes web-based info to allow for future predictions and insights

<http://www.keotag.com> - Search for tags in social bookmarking and blog sites with this simple-to-use search engine

<http://www.silobreaker.com> - "Must have" search engine for searching, aggregating and analyzing pertinent open source intelligence

<http://www.mamma.com> - Meta search tool, "the mother of all search engines", generating results from leading search engines

<http://www.visibletweets.com> - Twitter search tool for viewing tweets relating to keywords in a uniquely visualized format

<http://www.groowe.com> - Search Google, Yahoo, Bing, Ask and other search engines right from your browser's toolbar

<http://www.statigr.am> - Search for users, tags and pictures on Instagram with search tool Statigram

<http://www.jolicloud.com> - Jolidrive allows you to access all of your online data in one place from your browser

<http://www.my-ip-neighbors.com> - Determine if any other websites are hosted on a specific web server

<http://www.social-searcher.com> - Facebook, Google+, Twitter, MySpace and LinkedIn search tool

<http://www.socialseek.com> - Social media monitoring tool that allows you to search tweets, videos, news and blogs

<http://www.skipease.com> - People search portal with social media and public record search engines all in one place

<http://www.trendsmap.com> - Worldwide, real-time Twitter trends map, searchable by topic or location

<http://www.backtweets.com> - "Twitter time machine" for searching previously tweeted URLs

<http://www.flickrriver.co> - Flickr viewer and search tool, searchable by user, tag, group and place

UVRX (Search social media sites, including Facebook, Twitter, MySpace and LinkedIn)

<http://www.uvrx.com/>

UVRX Search Them All (Search Megaupload, Rapidshare, Badongo, filefactory, depositfiles, easy-share, sharedzilla, gigasize, divshare, sendspace, yousendit, Mediafire, Zshare, 4shared, letitbit, drop, filesurf, hotshare, usaupload, savefile, bigupload, up-file, hyperfiles,share, zippyshare, uploaded.to, uploading, sharebee, sharebomb, rapidsread, yourfilehost, Taringa and more in one easy search. To be able to download files directly from most of these online file storage services, you need to know the exact URL. Just use the search engine above to search them all... When you search online file storage services for files to download, you sometimes return a variety of different file types. To narrow down your search you can add a file extension to your search term, such as mp3, zip, rar, avi, mpg, exe etc. Quite often people will compress files with winzip or winrar to make them easier to download. Always scan files you download from online file storage services with an anti virus program before you attempt to open them)

<http://www.uvrx.com/search-all.html>

SCIRUS is the most comprehensive scientific research tool on the web. With over 575 million scientific items indexed at last count, it allows researchers to search for not only journal content but also scientists' homepages, courseware, pre-print server material, patents and institutional repository and website information. Recently added: Cambridge University Press and Oxford University Press

Taya It (Arabic) Tayait offers their users the ability to search in the following language modes: Morphological Search: Results include all inflections of the keyword. Expanded Search: Results include all derivatives of the keyword. Synonyms (Thesaurus): Return all synonyms and dialectical variants. Cross Language: The ability to input English words to search through Arabic Documents Phrase: The ability to link multiple keywords more loosely or tightly.

Le Moteur (French)

<http://lemoteur.orange.fr/>

Carrot Clustering Engine An open source search-results-clustering engine, just recently out in beta. In a nutshell, it takes search results, analyzes them and, on the fly, creates groups of the most common concepts or terms from those results. Since this is all done by algorithms rather than by humans, expect the odd result every once in a while. (BatesInformation Services, www.BatesInfo.com/tip.html)

<http://demo.carrot2.org/demo-stable/main>

Tianamo has developed a visually search engine that represents your search results as a terrain map. You decide if it has utility.

<http://search.tianamo.com/index2.php>

Semantics – in a nutshell, the study of words. Great site of 302 semantic web videos and podcasts.

Social Engineering

Social engineering is the act of manipulating people into performing actions or divulging confidential information. The term typically applies to trickery or deception for the purpose of information gathering, fraud, or computer system access; in most cases the attacker never comes face-to-face with the victim.

Social Engineering Fundamentals, Part I: Hacker Tactics

<http://www.symantec.com/connect/articles/social-engineering-fundamentals-part-i-hacker-tactics>

Social Engineering Fundamentals, Part II: Combat Strategies

<http://www.symantec.com/connect/articles/social-engineering-fundamentals-part-ii-combat-strategies>

Social Networking

Social networking sites can be especially useful for the analyst. Many of the sites are used by terrorists, gangs, criminals and others with less than honorable intentions. Careful analysis of these open source worlds can yield intelligence you never knew existed. Like a jigsaw puzzle, you may have to visit several sites (as the enemy does to post bits and pieces of information so as to not leave a trail) to bring it all together. This is the heart of analysis: bringing it all together to monitor the beat.

20 Free Social Media Monitoring Tools You Should be Using <http://smallbiztrends.com/2012/09/20-free-social-media-monitoring-tools.html>

1. [Hootsuite](#)

Hootsuite is a web-based dashboard that allows you to monitor multiple social networks in one place. You can collaborate with fellow employees, schedule messages, and assign tasks to your team. It's particularly great for managing multiple accounts on the same platform. This is one of my personal favorites.

2. [Klout](#)

Klout provides an influencer score based on your social media activity. Your Klout score is determined using over 400 variables. In addition to working on your own Klout score, you can look at your influences and who you influence to regularly share content that is of the highest quality from trusted sources.

3. [TweetReach](#)

Who is reading your tweets? How is it being shared? What is the measured impact of what you're putting out there? TweetReach is a social analytics tool that helps you capture this valuable information.

4. [TwentyFeet](#)

TwentyFeet aggregates your activity from various social media platforms so you can get the full picture of your online presence. Then, you can determine which of your activities are most valuable.

5. [Twitalyzer](#)

Measure your impact, engagement, and influence on Twitter with this tool. They offer three plans, depending on your needs, Individual, Business and Agency, all at a very reasonable price. They do offer their three most popular reports for free, so just connect your Twitter account and start Twitalyzing.

6. [PeerIndex](#)

Use this tool to determine your online authority and who your online brand advocates are. Learn which topics are best for you to focus on and who to connect with to spread the word.

7. [Facebook Insights](#)

This dashboard gives you all of the analytics data related to your Facebook page so that you can track growth and impact. Use the Insights to better understand your followers and reach the right audience.

8. [SocialMention](#)

Track and measure who is talking about you, your company, your product, or any topic related to your industry. SocialMention pulls data from hundreds of social media services to give you the most accurate, real-time information.

9. [SocialPointer](#)

This tool allows you to track and monitor social mentions and respond in real-time. Find potential customers, listen to what your competitors are saying, and get immediate feedback about your business.

10. [SocialBro](#)

Manage and analyze your Twitter account with SocialBro. This tool gives you detailed information about your Twitter community so that you can interact with followers more efficiently and garner the best results.

11. [FollowerWonk](#)

This Twitter analytics service, now owned by SEOMoz, allows you to understand and sort your followers. Learn when your influential followers are most active so that you can select the best times to engage your community and to ensure you're reaching the right people at the right time.

12. [HowSociable](#)

Measure your brand's impact online with this tool that provides you with a magnitude score. The score analyzes your level of activity online so that you can determine whether you have enough of a presence.

13. [Seesmic](#)

Manage all of your business' social media accounts in one place with Seesmic. Quickly view and respond to social activity in real-time even from your mobile devices.

14. [Engag.io](#)

This is a great tool for managing your conversations on social networks. Engag.io provides you with valuable insights into the people you are talking to via social media and also gives you a place to track whether or not you've responded.

15. [TweetDeck](#)

Arrange feeds from all of your social networks in one place using the TweetDeck dashboard. You can also

schedule tweets and set-up customizable feeds for your social search needs.

16. [Brand Monitor](#)

Track your brand across numerous social media sites. Find where conversations relevant to your business are taking place so that you can start becoming an active social media participant. Learn trending keywords and measure conversation engagement to help bring more valuable brand content to social media platforms.

17. [Kred](#)

Similar to Klout, Kred mines social data to give you a Kred score. The score is a combination of your influence and your outreach activity. Kred measures how often you tweet or post, how people interact with you, and the growth of your audience. Kred gives you a detailed breakdown of your score so that you know exactly where you should improve and the areas in social that are working well for your company.

18. [Google Analytics Social Reports](#)

Nicely integrated into your Google Analytics platform, Social Reports helps measure how social traffic is directly impacting your conversions. Using an overview of your social networks, this tool allows you to visualize your social traffic so that you know where your time is best spent in the social world.

19. [TwitterCounter](#)

TwitterCounter tracks Twitter users to give you statistics and usage information for your account. This service offers a very basic free package with graphical data, but you can pay a bit more for access to an account comparison feature, more updates, report exports, and more.

20. [Topsy](#)

This is a real-time social search engine. Sort through the latest social activity related to your industry, brand, or community and apply that knowledge to future business decisions.

There's a lot of overlap in the services these social media monitoring tools provide. It's most important that you find the tool that aligns with your business needs and personal preferences.

Software/Tools For The Open Source Analyst

Free and Open-source Social Network Analysis Software

[GraphChi](#) can run very large graph computations on just a single machine, by using a novel algorithm for processing the graph from disk (SSD or hard drive).

[Graphviz](#), open source graph visualization software.

[JUNG](#), the Java Universal Network/Graph Framework, a software library for the modeling, analysis, and visualization of network data.

[libсна](#), Python open-source library for Social Network Analysis.

[Maltego Community Edition](#), an open source intelligence and forensics application; allows you to identify key relationships and networks. Commercial edition available.

[NETINF](#), infers a who-copies-from-whom or who-repeats-after-whom network of news media sites and blogs using the MemeTracker dataset.

[Network Workbench](#): a large-scale network analysis, modeling and visualization toolkit for biomedical, social science and physics Research.

Visualization software: commercial

<http://www.kdnuggets.com/software/social-network-analysis.html#free>

[Advisor Analyst](#), interactive data visualization for business

[Antaeus](#), data visualization based on the idea of a virtual scatter plot matrix (free for non-commercial use).

[Augify](#), cloud-based platform for real-time meaning and visualization.

[bi-drillet](#), web-based tool which animates tabular data; presents a "slice" of a "cube" as a 2D bar graph and animates a "dimension".

[Centrifuge Systems](#), supports open ended Who, What, Where, Why and When questions, for rapid discovery of non-obvious relationships, anomalies, and more.

[CViz Cluster Visualization](#), for analyzing high-dimensional data in large, complex data sets.

[Daisy](#), a graphical analysis and interactive investigation program (available as OCX).

[Data Desk](#), provides interactive tools for exploratory data analysis and display

[DataMontage](#), Java graphing library for multivariate time-oriented data.

[Davisor Chart](#), a web charting and reporting J2EE™ component suite, designed for server-side use.

[Drillet](#), interactive, online visual analysis of data in spreadsheet format by "drill down".

[Eagle visual text mining software](#), enables you to rapidly analyze large volumes of unstructured text, create reports and easily communicate your findings.

[Grapheur 2.0](#), data mining and interactive visualization tool (free trial).

[GraphInsight](#), explore your graphs through high-quality 2D and 3D visualizations.

[Networkx](#), Python package for the creation, manipulation, and study of the structure, dynamics, and functions of complex networks.

[Pajek](#), program for Large Network Analysis.

[R](#), includes several packages relevant for social network analysis: **igraph**: generic network analysis package; **sna**: for sociometric analysis of networks; **network** manipulates and displays network objects.

[Social Networks Visualiser \(SocNetV\)](#), a flexible and user-friendly tool for the analysis and visualisation of Social Networks.

[Subdue](#), graph-based knowledge discovery system that finds structural, relational patterns in data representing entities and relationships.

[sna: R Tools for Social Network Analysis](#), including node and graph-level indices, structural distance and covariance methods, structural equivalence detection, and more.

[statnet](#), a suite of R packages for social network analysis, simulation and visualization.

[Tulip](#), an information visualization framework dedicated to the analysis and visualization of relational data (free).

[Gsharp](#), on-line and batch environment for business graphics

[High Tower TowerView](#) presents huge quantities of data (up to 10,000 different parameters) in a three-dimensional graphical environment.

[i2 Analyst's Workstation](#), i2 Inc. software for volume incident analysis; used worldwide to support intelligence-led policing, COMSTAT processes, anti-terrorism/force protection and more.

[IBM ILOG Visualization](#), a comprehensive set of graphics products for creating highly graphical, interactive displays.

[IDL](#), the Interactive Data Language, enables in-depth data analysis through industry-leading visualization

[InetSoft Style Intelligence](#), visualization-driven operational business intelligence platform for dashboards and data mashups.

[InetSoft Style Scope](#), real-time web-based visual data analysis and dashboard application with drag and drop designer.

[InFlow Network Mapping Software](#)

[InfoZoom](#), an easy to use visual data analysis tool that works with multiple databases without SQL-querying.

[InstantAtlas™](#), improves the visual communication of location-based statistical data, with reporting solutions that combine statistics and map data.

[IRIS Explorer](#), advanced visual programming environment for 3-D data visualization, animation and manipulation

[JMP](#), offers significant visualization and data mining capabilities along with classical statistical analyses.

[K.wiz](#), provides a range of Java visualization components including heatmaps, decision trees, 3D scatter plots and association rules.

[LeadScope](#), provides specialized data mining and visualization software for the pharmaceutical industry.

[Mercury Visualization Sciences Group](#), offering high-end 3D visualization software tools for scientific and industrial applications.

[Miner3D](#), data visualization technology with Dynamic Filters, PCA, K-means and other powerful methods enabling advanced visual data analysis in business and science.

[NETMAP](#), innovative combination of link analysis and data visualization, with applications to fraud detection and claims analysis.

[NovoSpark Visualizer](#), multidimensional data visualization tool for analysis of static and dynamic data, available in commercial and free (on-line) versions.

[Oculus](#), offering many unique and custom software solutions for business visualization.

[Office Advisor](#), interactive data visualization software for individual analysis.

[OpenViz](#), visualization components (both ActiveX and Java)

[Panopticon](#), data visualization tools optimized for monitoring and analysis of real-time data, with an in-memory OLAP data model and ability connect to virtually any data source.

[Parallax: Multi-Dimensional Graphs](#), software for visualization and classification by Alfred Inselberg, inventor of parallel coordinates method.

[Partek](#) interactive data analysis and visualization software for life sciences and engineering.

[Polychart Embeddable](#), a charting tool that can be placed anywhere on the web.

[PV-WAVE](#), array oriented fourth-generation programming language that enables users to rapidly import, manipulate, analyze and visualize data.

[Quantum 4d](#), multi-user visualization, knowledge and insight platform; empowers experts and non-technical users to build, navigate, edit and explore n-dimensional universes of insight using a dynamic 3D interface.

[Quadrigram](#), a platform for creating customized data visualizations, with a flexible visual language and many visualization templates.

[RapAnalyst](#), uses a combination of Neural Nets, Genetic algorithms, and SOM to visualize the knowledge and work with high dimensional data within the two-dimensional Knowledge Filter™.

[SAP BusinessObjects Xcelsius Enterprise](#), a data visualization tool for interactive analytics and dashboards with secure, live connections to SAP

Visualization software: free

<http://www.kdnuggets.com/software/social-network-analysis.html#free>

[Antaeus](#), data visualization based on the idea of a virtual scatter plot matrix (free for non-commercial use).

[d3.js: Data-Driven Documents](#), a JavaScript library for manipulating and visualizing HTML documents based on data.

BusinessObjects Enterprise and SAP BusinessObjects Edge.

[SAP Business Objects Tools For Advanced Visualization: Startree, Tablelens, Timewall, and Vizserver](#), let you easily set up visual

environments to explore extensive hierarchies and relationships in your applications, spot relationships and analyze trends in tabular data, and visualize long time horizons.

[ScienceGL](#), professional software solutions for 3D/4D scientific visualization.

[Sentinel Visualizer](#), with advanced social network analysis and visualization.

[Spatial Key](#), a next generation Information Visualization, Mapping, Analysis and Reporting System.

[Starlight Visual Information System \(VIS\)](#), from Future Point Systems, is a comprehensive visual analytics platform that transforms mountains of data into actionable intelligence.

[Tableau](#), a visual spreadsheet for databases that allows you to visually explore, analyze and create reports.

[TIBCO Spotfire](#), business class visualization platform.

[Trepapel KMX Text Analytics Visualization](#) platform includes landscaping of large documents sets, document similarity, precision and recall, frequency distribution and classification scores.

[Viscovery](#), intuitive visual representation, exploration, and modeling of complex data distributions, based on Self-Organizing Maps and classical statistics.

[Visipoint](#), Self-Organizing Map clustering and visualization.

[Visokio Omnisciope](#), desktop data discovery tool for interactive data visualization and publishing, including FeatureFinder for make and maintain DataPlayers especially for the web and desktop.

[Visual Insights](#) offers a comprehensive array of packaged and custom software solutions to help track and analyze eBusiness performance

[Visual ilo](#), provides cloud-based, enterprise class immersive business analytics and visualization solutions.

[VisuaLinks\(r\)](#), a platform-independent, graphical analysis tool used to discover patterns, trends, associations and hidden networks in any number and type of data sources.

[VisuMap](#), information visualization tools for high dimensional non-linear data.

[WITNESS Miner](#), a graphical data mining tool with decision trees, clustering, discretisation, feature subset selection, and more.

[Xanalys Link Explorer](#), providing visualization by query to support intelligence-led investigations and finding missing links in investigative paths.

[Databionic ESOM Tools](#), a suite of programs for clustering, visualization, and classification with Emergent Self-Organizing Maps (ESOM).

[DataWrangler](#), an interactive tool for data cleaning and transformation from Stanford Visualization Group.

[Gephi](#), open-source, free interactive visualization and exploration platform for all kinds of networks and complex systems, dynamic and hierarchical graphs.

[GGobi](#), next edition of xgobi.

[Graf-FX](#), analyze Up to 8 Numerical Values and drilldown to 5 levels of detail. View your data in a

variety of 2D or 3D graphs and queries. Interfaces with Access 95, 97, 2000

[Graphviz](#), open source graph visualization software.

[IBM OpenDX: Open Visualization Data Explorer](#), visualization framework for animating data.

[InetSoft Dashboardfree: Style Scope Free Edition](#), a free downloadable web-based application for interactive Flash dashboards and visualizations.

[InetSoft Visualize Free](#), a free web-based visualization service for sifting through multi-dimensional data.

[JuiceKit™ from JuiceAnalytics](#), a Software Development Kit (SDK) for building visualizations and Information Experience™ applications.

[Tulip](#), an information visualization framework dedicated to the analysis and visualization of relational data (free).

[i Visalix](#), a free web application for visual data analysis and clustering.

[VisDB](#), a Visual Data Mining and Database Exploration System, supporting Pixel-oriented Techniques (Spiral, Axes, and Grouping Techniques), Parallel Coordinates, and Stick Figures.

[Weave](#), a web-based visualization platform designed to enable visualization of any available data by anyone for any purpose.

[XDAT: X-dimensional Data Analysis Tool](#), reads high-dimensional data in column-based format and uses parallel-coordinates to visualize and analyse all dimensions at once.

[XGOBI](#), a data visualization system for viewing high-dimensional data

[XmdvTool](#), a public-domain software package for the interactive visual exploration of multivariate data sets.

Relavint Desktop (LexisNexis® Relavint™ Desktop is an easy-to-use visualization and drawing tool specifically designed for creating link analysis charts—visual relationships between individuals, addresses, vehicles, corporations, and other items.)

<http://www.accurint.com/relavintdesktop.html>

Paterva

<http://www.paterva.com/web6/>

RFFlow 5 (a powerful, yet easy to use, tool for drawing flowcharts, organization charts, and many other kinds of diagrams. You will quickly create professional-looking charts for documents, presentations, or the Web.)

<http://www.rff.com/>

Lucidchart (collaborative flow chart maker with some potential for intelligence analysis)

<https://www.lucidchart.com/>

Earthpoint - Excel To KML - Maps Excel worksheets onto Google Earth. Optional columns let you control balloon text, icon selection, mouse-over effects, and more. Supports Lat/Lon, UTM, UPS, MGRS, USNG, GEOREF, and State Plane coordinates. (Includes multiple other functions and features.)

<http://www.earthpoint.us/Default.aspx>

Encryption Wizard (EW) DoD Software Protection Initiative - EW is an SPC implementation of the Advanced Encryption Standard (AES) (Rijndael) augmented with a file manager Graphical User Interface (GUI) for ease of use. The 128-bit encryption/decryption algorithm used by Encryption Wizard is considered cryptographically strong and is routinely used in National Security Agency (NSA) and National Institute of Standards and Technology (NIST) certified products. Encryption Wizard is designed to protect data at rest and in transit (such as email attachments). EW is an easy to use tool for protecting sensitive (but not classified) documents, and for protecting files before transmission via email. It allows a user to encrypt files using a 128-bit implementation of the Advanced Encryption Standard (AES) with simple drag-and-drop efficiency. Encryption Wizard can significantly increase an organization's security posture at little to no cost to protect sensitive data in transit (E-mail, FTP, or shared web folders) or at rest on a removable storage device.

<http://spi.dod.mil/ewizard.htm>

Epi Info 7 - Epi Info is a suite of free data management, analysis, and visualization tools designed specifically for the public health community. It is used extensively, not just at CDC, but also domestically at the state and local level, as well as internationally. Epi Info allows you to: Rapid Electronic Form Creation and Data Entry - Rapidly create electronic data entry forms; these forms can have intelligence built into them. For example, you can automatically calculate a patient's age based on the survey data date of birth; you can also move the cursor past certain fields; you can even hide and unhide fields based on various conditions. It also allows you to enter data into those forms. Statistical Analysis - You can conduct various types of statistical analysis, including frequencies, 2x2 (two by two) tables, analysis of variance, conditional and unconditional logistical regression, Kaplan Meier survival analysis, complex samples, and many others. Mapping and Visualization - Epi Info also allows you to create several types of

maps, and also has graphing and charting capabilities. Report Design and Generation - And finally, Epi Info allows you to design and generate reports. <http://www.cdc.gov/epiinfo/7/index.htm>

Mendeley - Mendeley is a free reference manager and academic social network that can help you organize your research, collaborate with others online, and discover the latest research.

- ☐ Automatically generate bibliographies
- ☐ Collaborate easily with other researchers online
- ☐ Easily import papers from other research software
- ☐ Find relevant papers based on what you're reading
- ☐ Access your papers from anywhere online

<http://www.mendeley.com/>

Microsoft Mathematics 4.0 - teachers/guides/Pages/Mathematics-guide.aspx - With the Mathematics 4.0 free download, you get a full-featured graphing calculator with a formulas and equations library, a triangle solver, a unit conversion tool, ink handwriting support, and more.

<https://www.microsoft.com/education/en-us/teachers/guides/Pages/Mathematics-guide.aspx>

Near Repeat Calculator - This software originates with the relatively recent discovery of the near repeat phenomenon in burglary patterns, a discovery that has highlighted the communicability of crime events that affect the risk level at nearby locations. The near repeat phenomenon states that if a location is the target of a crime (such as burglary), the homes within a relatively short distance have an increased chance of being burgled for a limited number of weeks (Townsend et al, 2003; Bowers and Johnson, 2004; Johnson and Bowers, 2004a, 2004b). This communicability of risk to nearby locations for a short amount of time raises the possibility that other crime types may also suffer from a near repeat spatiotemporal pattern of behavior. The analytical method employed builds on a space-time clustering methods first pioneered by Knox (1964) to study the epidemiology of childhood leukemia. The Knox test seeks to determine whether there are more event-pairs observed that occur with a closer proximity in space and time than would be expected on the basis of a random distribution. To do this, each shooting for a particular dataset is compared with every other and the spatial and temporal distance between them recorded. The result is a matrix of space-time distances. <http://www.temple.edu/cj/misc/nr/>

Orange - Open source data visualization and analysis for novice and experts. Data mining through visual programming or Python scripting. Components for machine learning. Add-ons for bioinformatics and text mining, and data analytics. <http://orange.biolab.si/>

Python Programming Language - Python is a remarkably powerful dynamic programming language that is used in a wide variety of application domains. Python is often compared to Tcl, Perl, Ruby, Scheme or Java. Some of its key distinguishing features include:

- ☐ very clear, readable syntax
- ☐ strong introspection capabilities
- ☐ intuitive object orientation
- ☐ natural expression of procedural code
- ☐ full modularity, supporting hierarchical packages
- ☐ exception-based error handling
- ☐ very high level dynamic data types
- ☐ extensive standard libraries and third party modules for virtually every task
- ☐ extensions and modules easily written in C, C++ (or Java for Jython, or .NET languages for IronPython)
- ☐ embeddable within applications as a scripting interface

<http://www.python.org/>

Qiqqa - Essential software for PDF and research management

- ☐ Superior PDF management and reference management
- ☐ Unique tools to understand, discover and recall
- ☐ Annotate, tag, cite, cloud sync, OCR, and much more
- ☐ Free

<http://www.qigga.com/>

Quantum GIS - Quantum GIS (QGIS) is a user friendly Open Source Geographic Information System (GIS) licensed under the GNU General Public License. QGIS is an official project of the Open Source Geospatial Foundation (OSGeo). It runs on Linux, UNIX, Mac OSX, Windows and Android and supports numerous vector, raster, and database formats and functionalities. <http://www.qgis.org/>

Decision Analyst STATS 2.0- This easy-to use, Windows-based statistical software for marketing research performs multiple functions, including:

- ☐ Random numbers generator
- ☐ Sample size determination
- ☐ Mean, standard deviation, standard error, and range
- ☐ Standard error of a proportion
- ☐ Significance testing
- ☐ Correlation
- ☐ Cross-tabulation
- ☐ Factor analysis
- ☐ Multiple regression
- ☐ Cluster analysis

<http://www.decisionanalyst.com/download.aspx>

Squidmat – Decision analysis software. The program compares two or more courses of action based on two or more evaluation criteria. The user arranges the evaluation criteria in descending order of importance and tells the program how much more important each criterion is than the next lower criterion. These importance ratings are used to calculate weights for each criterion. SquidMat takes usersupplied values for each course-of-action/criterion combination and converts them to Z scores. Using the criterion weights, the program calculates weighted sums for each course of action. The course of action with the highest weighted sum is considered to be the best. SquidMat is designed as a replacement decision matrix program for the CAS3 program DECMAT.

<http://faculty.tamu-commerce.edu/jmstauffer/squidmat/squidmat.htm>

CrimeStat III - CrimeStat III is a spatial statistics program for the analysis of crime incident locations, developed by Ned Levine & Associates under the direction of Ned Levine, PhD, that was funded by grants from the National Institute of Justice. The program is Windows-based and interfaces with most desktop GIS programs. The purpose is to provide supplemental statistical tools to aid law enforcement agencies and criminal justice researchers in their crime mapping efforts. CrimeStat is being used by many police departments around the country as well as by criminal justice and other researchers. The latest version is 3.3. The program inputs incident locations (e.g., robbery locations) in 'dbf', 'shp', ASCII or ODBC-compliant formats using either spherical or projected coordinates. It calculates various spatial statistics and writes graphical objects to ArcGIS®, MapInfo®, Surfer for Windows®, and other GIS packages. <http://www.icpsr.umich.edu/CrimeStat/>

Significant Activities, abbreviated as SigActs, is a military term that refers to incidents occurring on a battlefield. In today's globalized economy, news and events transpiring around the world can have an impact on international supply chains and local public safety. SigActs.com is an attempt to identify and display the geographic relevance of news from around the globe.

<http://www.sigacts.com/endpoints/map/webapp/#>

Analysis of Competing Hypotheses Software -- Analysis of Competing Hypotheses (ACH) is a simple model for how to think about a complex problem when the available information is incomplete or ambiguous, as typically happens in intelligence analysis. The software downloadable here takes an analyst through a process for making a well-reasoned, analytical judgment. It is particularly useful for issues that require careful weighing of alternative explanations of what has happened, is happening, or is likely to happen in the future. It helps the analyst overcome, or at least minimize, some of the cognitive limitations that make prescient intelligence analysis so difficult. ACH is grounded in basic insights from cognitive psychology, decision analysis, and the scientific method. It helps analysts protect themselves

from avoidable error, and improves their chances of making a correct judgment. This software was developed by Palo Alto Research Center (PARC) in collaboration with Richards J. Heuer, Jr. It was developed for use by the U.S. Intelligence Community with funding from the Intelligence Community's Advanced Research and Development Activity (ARDA) and the Office of Naval Research (ONR). In distributing ACH, PARC is making the presently downloadable version of the program available to the general public at no cost when used for non-commercial or educational purposes subject to the terms and conditions of its end user license. <http://www2.parc.com/istl/projects/ach/ach.html>

CARVER2 - Target Analysis Software -- CARVER2, a free software tool that provides a non-technical method of comparing and ranking critical infrastructure and key resources. It is the only assessment tool that ranks critical infrastructure across sectors. The CARVER2 vulnerability assessment tool is designed to quickly and easily identify and compare potential natural disaster and/or terrorist targets at the local, state and national levels in order to assist government officials in the allocation of protective resources. The CARVER2 target analysis tool is available free of charge to federal, state, and local government officials and agencies, as well as non-profit and educational institutions. <http://www.ni2cie.org/CARVER2.asp>

Computer Online Forensic Evidence Extractor -- Microsoft COFEE is being made available to individuals employed by law enforcement agencies within the United States and Canada. COFEE means the Computer Online Forensic Evidence Extractor tool that fits on a USB drive and automates the execution of commands for data extraction and related documentation. Distribution is limited to law enforcement agencies. Access to the COFEE product requires verification of employment with a law enforcement agency and agreement to the terms and conditions of the Microsoft/NW3C Sublicense Agreement. The verification process is automated if you have an email account with RISS.NET or LEO.GOV, or have an account with NW3C. <https://cofee.nw3c.org/>

Computer Security Evaluation Tool -- The Department of Homeland Security (DHS) has released its latest cyber system assessment tool to the Critical Infrastructure/Key Resources (CI/KR) community. The Computer Security Evaluation Tool (CSET) is a desktop software tool that guides users through a step-by-step process to evaluate their cyber systems and network security practices against recognized industry standards. According to DHS, the benefits of CSET include:

- Contributing to an organization's risk management and decision-making process;
- Raising awareness and facilitating discussion on cyber security within the organization;
- Highlighting vulnerabilities in the organization's systems and providing recommendations on ways to address those vulnerabilities;
- Identifying areas of strength and best practices being followed in the organization;
- Providing a method to systematically compare and monitor improvement in the cyber systems; and
- Providing a common industry-wide tool for assessing cyber systems.

CrimeStat III -- CrimeStat III is a spatial statistics program for the analysis of crime incident locations, developed by Ned Levine & Associates under the direction of Ned Levine, PhD, that was funded by grants from the National Institute of Justice. The program is Windows-based and interfaces with most desktop GIS programs. The purpose is to provide supplemental statistical tools to aid law enforcement agencies and criminal justice researchers in their crime mapping efforts. CrimeStat is being used by many police departments around the country as well as by criminal justice and other researchers. The latest version is 3.3. The program inputs incident locations (e.g., robbery locations) in 'dbf', 'shp', ASCII or ODBC-compliant formats using either spherical or projected coordinates. It calculates various spatial statistics and writes graphical objects to ArcGIS®, MapInfo®, Surfer for Windows®, and other GIS packages. <http://www.icpsr.umich.edu/CrimeStat/>

Comprehensive R Archive Network -- Comprehensive R Archive Network a freely available language and environment for statistical computing and graphics which provides a wide variety of statistical and graphical techniques: linear and nonlinear modelling, statistical tests, time series analysis, classification, clustering, etc. <http://cran.r-project.org/>

Decrypto 8.5 -- Decrypto is a fast and automated cryptogram solver by Edwin Olson. It can decode word games often found in newspapers, including puzzles like cryptoquips and patristocrats. You can also download a stand-alone version. [We have also found this program useful for quickly breaking simple substitution ciphers used by some criminal gangs.]

<http://www.blisstonia.com/software/WebDecrypto/>

Encryption Wizard (EW) DoD Software Protection Initiative -- EW is an SPC implementation of the Advanced Encryption Standard (AES) (Rijndael) augmented with a file manager Graphical User Interface (GUI) for ease of use. The 128-bit encryption/decryption algorithm used by Encryption Wizard is considered cryptographically strong and is routinely used in National Security Agency (NSA) and National Institute of Standards and Technology (NIST) certified products. Encryption Wizard is designed to protect data at rest and in transit (such as email attachments). EW is an easy to use tool for protecting sensitive (but not classified) documents, and for protecting files before transmission via email. It allows a user to encrypt files using a 128-bit implementation of the Advanced Encryption Standard (AES) with simple drag-and-drop efficiency. Encryption Wizard can significantly increase an organization's security posture at little to no cost to protect sensitive data in transit (E-mail, FTP, or shared web folders) or at rest on a removable storage device. The primary version for government users utilizes a FIPS 140-2 validated encryption engine licensed from RSA <http://spi.dod.mil/ewizard.htm>

Near Repeat Calculator -- This software originates with the relatively recent discovery of the near repeat phenomenon in burglary patterns, a discovery that has highlighted the communicability of crime events that affect the risk level at nearby locations. The near repeat phenomenon states that if a location is the target of a crime (such as burglary), the homes within a relatively short distance have an increased chance of being burgled for a limited number of weeks (Townesley et al, 2003; Bowers and Johnson, 2004; Johnson and Bowers, 2004a, 2004b). This communicability of risk to nearby locations for a short amount of time raises the possibility that other crime types may also suffer from a near repeat spatio-temporal pattern of behavior.

The analytical method employed builds on a space-time clustering methods first pioneered by Knox (1964) to study the epidemiology of childhood leukemia. The Knox test seeks to determine whether there are more event-pairs observed that occur with a closer proximity in space and time than would be expected on the basis of a random distribution. To do this, each shooting for a particular dataset is compared with every other and the spatial and temporal distance between them recorded. The result is a matrix of space-time distances.

To establish a null hypothesis measure against which to test the shooting patterns, we employ a Monte Carlo simulation process. By computing multiple simulations of the expected values, it is possible to generate an expected distribution under a null hypothesis – using the actual study data. This provides a unique way to examine what would occur if there were no near repeat patterns.

<http://www.temple.edu/cj/misc/nr/>

Problem Analysis Module -- Problem Analysis Module (PAM) gives you a framework for analyzing any persistent crime and public safety problem. PAM will ask you to input information concerning every aspect of the problem and then suggest the kinds of responses you could try. PAM was developed to assist police problem solving through the asking of specific questions. The questions come from research into a set of powerful theories within the field of Environmental Criminology – particularly Routine Activity Theory, Situational Crime Prevention, and Crime Pattern Theory.

<http://www.popcenter.org/learning/pam/>

RFFlow 5 -- RFFlow is a powerful, yet easy to use, tool for drawing flowcharts, organization charts, and many other kinds of diagrams. You will quickly create professional-looking charts for documents, presentations, or the Web. RFFlow has the capability to generate crime analysis charts.

<http://www.rff.com/index.htm>
http://www.rff.com/sample_criminal_analysis.htm

RAIDS On-Line Public Crime Map -- BAIR's free public crime map, RAIDS Online, connects law enforcement with the community to reduce crime and improve public safety. RAIDS Online is absolutely free to law enforcement and the public! RAIDS On-line's public crime map works with any RMS to allow law enforcement to share crime data with the public through an easy-to-use online crime map and analytics dashboard. The data is displayed with 8 fields of limited offense information to protect victim privacy. This is a valuable tool for law enforcement to communicate crime activity to their citizens and the media.

Analyst Toolbox: A Toolbox For The Intelligence Analyst

http://it.ojp.gov/documents/analyst_toolbox.pdf

22 Free Tools for Data Visualization and Analysis (There are many tools around to help turn data into graphics, but they can carry hefty price tags. The cost can make sense for professionals whose primary job is to find meaning in mountains of information, but you might not be able to justify such an expense if you or your users only need a graphics application from time to time, or if your budget for new tools is somewhat limited. If one of the higher-priced options is out of your reach, there are a surprising number of highly robust tools for data visualization and analysis that are available at no charge.)

8 more free tools for data visualization and analysis

http://blogs.computerworld.com/18212/8_more_free_tools_for_data_visualization_and_analysis

GeoChat It is designed to enable self-organizing group communications by allowing users to link the field, headquarters, and the local community in a real-time, interactive conversation visualized on the surface of a map. GeoChat is a tool for group communications based on SMS, email, and Twitter. People use GeoChat to simplify team communications, logistics and data reporting, and they can extend their own software applications using the open APIs. GeoChat is a flexible open source group communications technology that lets team members interact to maintain shared geospatial awareness of who is doing what where — over any device, on any platform, over any network. GeoChat allows you and your team to stay in touch one another in a variety of ways: over SMS, over email, and on the surface of a map in a web browser. Whether you are sitting at a computer with a high-speed Internet connection, or on the go with your mobile phone, GeoChat lets you react to events on the ground with maximum agility, forming cross-organizational virtual teams on the fly, linking field to headquarters, and keeping everyone on your team connected, in sync, and aware of who is doing what, and where.

New Tools of Military Soft Power <http://www.nationaldefensemagazine.org/Pages/default.aspx>

Broadcast Television Tools to Help Intelligence Analysts Wade Through Data

<http://www.nationaldefensemagazine.org/Pages/default.aspx>
<http://www.nationaldefensemagazine.org/archive/2011/March/Pages/BroadcastTelevisionToolsToHelpIntelligenceAnalystsWadeThroughData.aspx>

Granted there are many units out there that do not have the budget to buy or subscribe to expensive analytical software, but this should not stop the analyst from doing his/her work. There are abundant resources of freebies that when used in conjunction with each other provide just as powerful analytical capabilities. I actually view this as a heavy **plus (+)**. When we use expensive commercial versions of analytical software that give instantaneous analysis/gratification we tend to depend too much on the outcome and in many cases take the results for granted. When we do this we cheat ourselves from doing our own critical thinking and critical analysis for good predictive analysis. However, by taking advantage of the free (or very cheap) community versions and using them together we force ourselves to do more critical thinking/analysis because we are trying to determine what information to input into one program based on the output of another program.

Recorded Future (scour the web, extract, analyze and rank, then explore the past, present and future.) <https://www.recordedfuture.com/>

IP Locator (Find an Internet user's geographic location without invading visitor's privacy)

IP Locator Object is a multiplatform API that will help you understand your visitors better by geographical location. IP Locator Object provides a wealth of information you can use to geotarget.

<http://www.melissadata.com/dqt/ip-locator.htm>

Sample Output using IP Locator Object

IP Address	216.231.3.166
Latitude	33.4774
Longitude	-117.705
ZIP	92624
Region	CALIFORNIA
Name	COX COMMUNICATIONS INC
Domain	COX.NET
City Name	DANA POINT
Country	UNITED STATES
Abbreviation	US

Google Goggles. You have to try this one and see for yourself. My mind wandered as I gave this one a spin. Suppose a drug cartel member is interviewed in a strange location, however, in the distance you are able to distinguish a building and.... What if you found a note at a terrorist location in a different language. The possibilities are endless. Google Goggles lets you search Google using pictures from your camera phones. We take an image as input, and using several image recognition backends (object recognition, place matching, OCR, etc), we return relevant search results.

<http://www.google.com/mobile/goggles/#text>

Google Squared. Google Squared is an experimental tool that takes a category (like US presidents, roller coasters, or digital cameras) and attempts to create a starter "square" of information, automatically fetching and organizing facts from across the web. You can modify your square by removing rows and columns you don't like--or by adding new rows and columns and having Google Squared attempt to fetch the relevant facts. Verify and correct the facts in your square by exploring the original sources and investigating other

possible values. If you're happy with your square you can save it and come back to it later. Google Squared does the grunt work for you, making research fast and easy. I use this one often. You can then export the results into an excel spreadsheet that you can then modify to suit your needs. Using this one in conjunction with Google Squared helps fill in the blanks. <http://www.google.com/squared>

Google News Timeline is a web application that organizes information chronologically. It allows users to view news and other data sources on a zoomable, graphical timeline. You can navigate through time by dragging the timeline, setting the "granularity" to weeks, months, years, or decades, or just including a time period in your query (ie. "1977"). I queried MS-13 and was amazed at the results. Went back to 1996 and was able to do some raw trend analysis. Did the same thing with "California Gangs". It will take patience. Available data sources include recent and historical news, scanned newspapers and magazines, blog posts and Twitter status messages, sports scores and various types of media like music albums and movies. Using this one in conjunction with Google Squared helps fill in the blanks.

<http://newstimeline.googlelabs.com/>

Maltego is an open source intelligence and forensics application. It will offer you timous mining and gathering of information as well as the representation of this information in a easy to understand format. Coupled with its graphing libraries, Maltego allows you to identify key relationships between information and identify previously unknown relationships between them. <http://www.paterva.com/web5/>

ORA is a dynamic meta-network assessment and analysis tool developed by CASOS at Carnegie Mellon. It contains hundreds of social network, dynamic network metrics, trail metrics, procedures for grouping nodes, identifying local patterns, comparing and contrasting networks, groups, and individuals from a dynamic meta-network perspective. *ORA has been used to examine how networks change through space and time, contains procedures for moving back and forth between trail data (e.g. who was where when) and network data (who is connected to whom, who is connected to where ...), and has a variety of geo-spatial network metrics, and change detection techniques. *ORA can handle multi-mode, multi-plex, multi-level networks. It can identify key players, groups and vulnerabilities, model network changes over time, and perform COA analysis. It has been tested with large networks (106 nodes per 5 entity classes).Distance based, algorithmic, and statistical procedures for comparing and contrasting networks are part of this toolkit. <http://www.casos.cs.cmu.edu/projects/ora/>

Computational Models and Social Network Tools

http://www.casos.cs.cmu.edu/computational_tools/tools.html

RFFlow is a powerful, yet easy to use, tool for drawing flowcharts, organization charts, and many other kinds of diagrams. You will quickly create professional-looking charts for documents, presentations, or the Web. 30 day free trial period; \$49.00 thereafter for individual. <http://rff.com/>

The Brain Simply type in your ideas. Drag and drop files and web pages. Any idea can be linked to anything else. Using your digital Brain is like cruising through a Web of your thinking. See new relationships. Discover connections. Go from the big picture of everything to a specific detail in seconds <http://www.thebrain.com/>

SPY (spy can listen in on the social media conversations you're interested in. What do you want to listen for?) <http://www.spy.appspot.com/>

Spokeo (not your grandmas phone book) <http://www.spokeo.com/>

Silobreaker (for those familiar with Analyst Notebook, I think you'll like this)

<http://www.silobreaker.com/>

Evolution (It has applications in forensic investigations, law enforcement, **intelligence operations**, identity fraud, and identity verification processes). Download the free community edition. It is not as powerful as the commercial version, which is also very expensive, but has great utility when used in conjunction with other free sites like Silobreaker. <http://www.paterva.com/web2/>

A Periodic Table of Visualization Methods (If you've ever wondered how to model something, or were looking for new ideas for segmenting and presenting complex concepts, this is an incredible online resource. A neat graphical explanation and example of each "element" (ex; a cycle diagram) appears as soon as your cursor scrolls over them. For instance, they've color-coded their categories: data, metaphor, concept, strategy, information, and compound visualisation techniques. As if that were not enough to spark your brain, the creators also provide clues as to whether the model works best for convergent or divergent thinking, and whether it is more for an overview vs. detailed perspective.)

http://www.visual-literacy.org/periodic_table/periodic_table.html

Sentinel Visualizer (for those of you who have experience with Crime Link and Analyst Notebook this one should be quite interesting. You can download a 45-day fully functional with all the bells and whistles copy and take it for a spin, and at the same time train yourself to use the software. It may come in handy down the road and you can always say you know how to use it)

Decision Matrix Software Download

<http://www.dcsswift.com/military/software.html>

NNDB Tracking the Entire World. Not sure if this one has any utility but I throw it in for your perusal. I had fun with Fidel Castro, Hugo Chavez and Vladimir Putin. NNDB is an intelligence aggregator that tracks the activities of people we have determined to be noteworthy, both living and dead.

Superficially, it seems much like a "Who's Who" where a noted person's curriculum vitae is available (the usual information such as date of birth, a biography, and other essential facts.). But it mostly exists to document the connections between people, many of which are not always obvious. A person's otherwise inexplicable behavior is often understood by examining the crowd that person has been associating with.

<http://www.nnadb.com/>

Visualization Software: Analysts are great when it comes to understanding relationships. Visual results jump right at you. If they can query a search engine that produces results in a relational (visual) format, they immediately grasp the information and start drawing conclusions. Visual results are more

appealing than endless lists of browsing results which are extremely time consuming even when doing key word searches.

Viewzi is a metasearch engine. It searches not only Google and Yahoo, but also Flickr, YouTube and other great sources of information to present the search results blended in different “flavors”. You not only get one, but seemingly countless ways to view your search results, each using thumbnail images, screenshots and more as visual aids <http://www.viewzi.com/>

NeXplore lets you choose between three ways of viewing search results. For starters, there is the regular list of web search results: Title, description and URL. But you get much more than that. Thumbnail images and pop-up previews which make it easier to browse the search result and decide which to click. <http://www.nexplore.com/>

Steganography and Terrorists

Steganography is the science of writing hidden messages in such a way that no one apart from the sender and intended recipient even realizes there is a hidden message.
Sunday, July 31, 2011

In 2010 Moscow communicated with a ring of alleged spies in America by encoding instructions in otherwise innocent-looking images on public websites. It's a process called steganography. Steganography is a smart way to hide data into other files, called carriers. Modified carriers will look like the original ones, without perceptible changes. The advantage of steganography, over cryptography alone, is that messages do not attract attention to themselves. Plainly visible encrypted messages will arouse suspicion, and may in themselves be incriminating in countries where encryption is illegal. Today we can use some free tools to create covert transmission for any sensitive data or to protect your copyright.

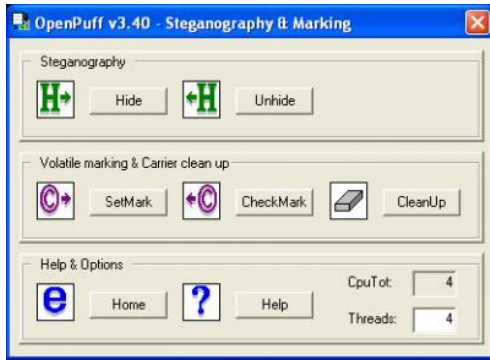

Protecting files copyright is by using Watermarking which is the process of embedding information into a digital signal which may be used to verify its authenticity or the identity of its owners. Still images, video, music, text, and software are all easily copied and illegally distributed, causing the authors to lose out on considerable income in royalties.

By embedding identifying information in a file, watermarking software enables authors to control the distribution of and to verify ownership of their digital information.

The first tool is OpenPuff a freeware steganography tool for Microsoft Windows created by Cosimo Oliboni and still maintained as independent software author.

The program is notable for being the first steganography tool (version 1.01 released on December 2004) that:

- *Let's users hide data in more than a single carrier file. When hidden data are split among a set of carrier files you get a carrier chain, with no enforced hidden data theoretical size limit (256Mb, 512Mb... depending only on the implementation)*
- *Implements 4 layers of hidden data obfuscation (cryptography, scrambling, whitening and encoding)*
- *Extends deniable cryptography into deniable steganography*

The current version is OpenPuff 3.40 and released on the 18th of July.
Another interesting tool is QuickStego which lets you hide text in pictures so that only other users of QuickStego can retrieve and read the hidden secret messages.
Once text is hidden in an image the saved picture is still a 'picture', it will load just like any other image and appear as it did before.
The image can be saved, emailed, uploaded to the web as before, the only difference will be that it contains hidden text

Suicide Bomber Profile

Following is a checklist for observing, reporting, responding and investigating suicide bombing incidents. It is not designed as a comprehensive or complete list of all considerations in these areas but is suggestive of the types of common concerns that may affect police and other emergency service responders. A noted authority on terrorism states that Israeli authorities and psychologists have carefully developed behavioral profiles that might help security personnel identify a potential suicide bomber. The following are among the most obvious signs of such persons according to this source.

- The wearing of heavy clothing, no matter what the season. Long coats or skirts may be used to conceal explosive belts and devices.
- An unusual gait, especially a robotic walk. This could indicate someone forcing or willing himself/herself to go through with a mission.
- Tunnel vision. The bomber often will be fixated on the target and for that reason will look straight ahead. He or she also may show signs of irritability, sweating, tics, and other nervous behavior. (The Al Qaeda terrorist Ahmed Ressam, who was captured at a border crossing in Washington state while driving a car filled with bomb-making materials, caught the attention of authorities because of his excessive sweating, furtive eyes, and other nervous movements.)
- The appearance of being drugged. The suicide truck bomber who attacked the U.S. Marine Barracks in Beirut in 1983 had been drugged before the attack and was tied to the seat of his vehicle.
- Signs of drug use - including, for example, enlarged pupils, fixed stare, and erratic behavior.
- Bags or backpacks (used to carry explosives, nails, and other shrapnel). The bomber generally holds his or her bag or backpack tightly, sometimes gingerly, and may refuse to be separated from it.
- A fresh shave—a male with a fresh shave and lighter skin on his lower face may be a religious Muslim zealot who has just shaved his beard so as not to attract attention, and to blend in better with other people in the vicinity.
- A hand in the pocket or tightly gripping something—this could be someone clutching a detonator or a trigger for an explosive device. Such triggers, which may be designed in the form of button, usually are rather stiff so that they may not be set off accidentally. (One Israeli acquaintance described how he and several guards shot a would-be bomber numerous times, but found his twitching finger still on the button—and still posing a danger, thereafter.)
- Evasive movements. It seems obvious that anyone who tries to avoid eye contact, or to evade security cameras and guards, or who appears to be surreptitiously conducting surveillance of a possible target location, may be a bomber.

Such profiles are valuable not only for law enforcement personnel but for all persons who work in security or related fields in facilities or other locations that are potential targets or, where intelligence indicates an elevated risk of a terrorist attack. Programs throughout the United States have successfully recruited key

personnel within the community to act as additional eyes and ears for law enforcement. Mall security officers for example have been introduced to the above type of profile information in order to more effectively spot potential terrorist threats. Similarly, community outreach programs provided training to other persons who are in positions where they are more likely to interact with terrorist cells or operatives, such as car rental agents, truck rental agents, security storage operators, hotel and motel managers, school and hospital security officers, and related persons.

Questions

1. Which of the following statements is *false*?

- (a) *Suicide bombing attempts have not yet been made within the United States.*
- (b) *Most of what we know presently about suicide bombings has come from experiences overseas in Israel and Iraq.*
- (c) *A major disadvantage of suicide bombers on foot is the limited amount of explosives that they can reasonably conceal and carry.*
- (d) *A major advantage of suicide bombers on foot is that they can penetrate targets not otherwise available to motor vehicles.*

2. Which of the following statements is *false*?

- (a) *The main advantage of vehicular suicide bombers is the ability to carry large explosive payloads.*
- (b) *Bloodborne pathogens can be delivered by suicide bombers.*
- (c) *Suicide bombers can and have penetrated heavily fortified compounds.*
- (d) *None of the above is false.*

3. Which of the following statements is *false*?

- (a) *Suicide bombers often target location where large numbers of persons gather.*
- (b) *In the preincident phase, surveillance of a target is often performed.*
- (c) *Most commonly, suicide bombers are unmarried males between 16 and 40 years of age.*
- (d) *Females have not been used for suicide bombings.*

Answers

- 1. (a) Suicide bombing attempts have been made within the United States.
- 2. (d) None of the statements is false.
- 3. (d) Females have been used as suicide bombers.

Suspicious Packages

How to Handle Suspicious Mail

What constitutes a suspicious letter or parcel? Some typical characteristics which ought to trigger suspicion include letters or parcels that:

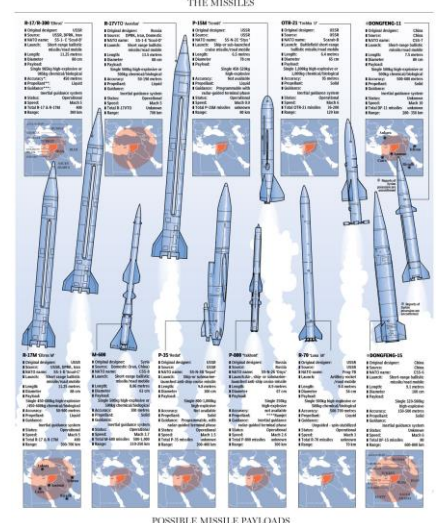

- Have any powdery substance on the outside.
- Are unexpected or from someone unfamiliar to you.
- Have excessive postage, handwritten or poorly typed address, incorrect titles or titles with no name, or misspellings of common words.
- Are addressed to someone no longer with your organization or are otherwise outdated.
- Have no return address, or have one that can't be verified as legitimate.
- Are of unusual weight, given their size, or are lopsided or oddly shaped.
- Have an unusual amount of tape.
- Are marked with restrictive endorsements, such as "Personal" or "Confidential."
- Have strange odors or stains.

Syria

SYRIA'S MISSILE ARSENAL

Syria has one of the largest missile arsenals in the Middle East. Its missile build-up began in earnest in the primary inventory, based on the Soviet Union's conventional military capabilities, Syria began working on unconventional deterrent that resulted in what is widely alleged to be a robust chemical weapons program and ballistic missile delivery systems.

Syria embarked on a chemical weapons program in the 1980s sparked by regional security considerations and its hatred of Israel, says the non-profit group the Nuclear Threat Initiative. A facility in the city of Aleppo is reportedly used for chemical weapons testing. In 2007, Syria allegedly attempted to transport a load of chemical weapons, resulting in an explosion and 26 deaths. In the early or mid-2000s, Syria is believed to have started producing chemical weapons. By 2006, it had obtained chemical weapons production technology from Western Europe and was concentrating on producing nerve agents.

The Deep Web

Deep Web Search Tools for Everyone

<http://deep-web.org/>

Deep Web Search Engines

Multi Search engines

[Deeperweb.com](#) — This is my favorite search engine. It breaks your results down into categories — general web, blogs, news, academic, cloud, metrics, research, etc. This allows you to quickly focus on the type of answer you were looking for. Makes my top 10 websites!

[Zuula.com](#) — nice multi engine aggregator

[Surfwax](#) — They have a 2011 interface for rss and a 2009 interface I think is better. Takes 60 seconds to understand how to use it.

[Dogpile](#) — another multi engine aggregator

Scout Project- [scout.wisc.edu](#) — Since 1994, the Scout Project has focused on developing better tools and services for finding, filtering, and presenting online information and metadata.

Cluster Analysis Engine

[TouchGraph](#) — A brilliant clustering tool that shows you relationships in your search results using a damn spiffy visualization. The smart way to use it, is to let it help you find new sources to your search topic. I have to add, the wiggly effect on the visualization is damn cool, just grab the center item and move it to understand what I'm talking about. (sometimes it doesn't wiggle, however. Java issue?)

[Yippy.com](#) — A useful, non-graphical clustering of results. Give it 2 minutes of your time to understand how it works and it will give back hours of saved research time.

[www.quintura.com](#) — An interesting data mining search engine that shows related words to your target. Good if you aren't sure what the exact name of the subject is you seek [www.navagent.com/](#) - Not a web based search engine, requires you download software. Highly rated, very interesting especially to the 35F intel types.

Specialty Deep Web Engines

[Infomine](#) - comprehensive virtual library and reference tool for academics. But I've found it not too useful, better engines out there.

[Archive.org](#) — Huge behemoth of media now public domain — rare books, sound recordings, video, 20 year archived images of all old websites, and free audio books! Makes my top 10 list. (and my top 3)

[WWW virtual library](#) — a listing of indexes to industries. Need to know about Architecture? Biochemical war? Zoology? This may get you there.

[FindArticles.com](#) — FindArticles has articles from about 500 periodicals with coverage back to 1998, and is completely free of charge.

[Library of Congress](#) — loc.gov — Phenomenal digitized archives, "American Memory" especially interesting. Includes a good newspaper archive.

[www.osti.gov](#) - Government research archives, if your tax dollars paid for it, the results are here. Also a huge collection of science presentation videos.

[US Geologic Survey](#) — Imagery and Maps galore. 3 portals to fetch data, EarthExplore, Glovis and Seamless. Extremely complex. There are tutorials on [how to get free aerial photos](#) over at [learninggis.com](#).

[US National Map by USGS](#) - The source for current geospatial data from the USGS.

[http://adswww.harvard.edu/](#) — Physics and Astronomy data engine for academic papers

General

[GPO's Catalog of US Government Publications](#) — Federal publications database.

[Smithsonian Institution Libraries](#) — 20 libraries from museum complexes around the world.

[The National Archives](#) — National Archives' research tools and online databases.

[HighWire Press](#) — Online catalog of the largest repository of free full-text and non-free text, peer-reviewed content, from over 1000 different journals.

[Education Resources Information Center \(ERIC\)](#) — A catalog with more than 1.2 million bibliographic records, many with full text. Sponsored by the US Department of Education.

[Encyclopædia Britannica](#) — The old and authoritative encyclopedia searchable with full text online. No longer printing paper copies. The internet killed the library star.

[Topix.net](#) — A news search engine.

[Internet Public Library](#) — Internet's public library. More for kids than adults, IMHO.

[San Francisco Public Library](#) — A great online library. This is just one example of many such local public libraries that offer similar services. Sorry, you can't use their access to commercial archives unless you are a member.

[Xrefer \(commercial\)](#) — Fee based database of 236 titles and over 2.9 million entries.

[LexisNexis \(commercial\)](#) — Billed as the world's largest collection of public records, unpublished opinions, legal, news, and business information. Over 35,000 individual sources are claimed as searchable. I've not been able to justify subscribing, so I don't know.

[Forrester Research \(Commercial\)](#) — An independent technology and market research company, publishing in-depth research reports on a variety of subjects.

[Factiva \(Commercial\)](#) — Online collection of about 10,000 individual sources. It's a fact.

Find People & Background Checks

[Pipl.com](#)— for finding people

[zabasearch.com](#) — finding people

[Intellus \(commercial\)](#) — Finding people plus background checks on people and other features.

[US Search \(commercial\)](#) — Finding people plus background checks on people.

[123 People \(commercial\)](#) — A multi search engine built around finding people.

[Integrascan](#) — Finding people plus background checks on people.

[State of Texas DOT Criminal Background Check](#) — The central background check for felonies provided by the state. Most misdemeanors don't show up.

Books Online

[Archive.org](#) — Has books online in epub, txt, and pdf formats. The collection encompasses others such as Gutenberg Press, etc. So this is the best site to start with. Again, this makes my top 10 websites. Share the love.

[Books.google.com](#) — They are putting the squeeze on all the book scanning businesses. They want to scan the world to add it to the Google Borg. You will be assimilated.

[The Online Books Page](#) — A searchable database of more than 28,000 English works with full text available for free online.

[Bibliomania](#) — A database of free literature from more than 2,000 classic texts. Archive.org crushes this.

[Project Gutenberg](#) — The granddaddy of online books with a catalog of more than 20,000 free books with full text available online. Included in Archive.org.

[The National Academies Press](#) — Only about 3,000 free books online and ~900 for-sale PDFs.

[ebrary](#) — A database of about 20,000 full-text books. Focusing on academia and business.

[UNZ](#) — An odd collection of periodicals and book scanned.

[Get Abstracts \(commercial\)](#) — Large online library of more than 8,000 business book summaries. It is the most efficient way to get the best business titles.

Newspaper Archives Online

[US newspaper coverage](#) — ResearchGuides lists links to many newspapers
[Library of Congress Newspaper Resource List](#) — LOC does a great job getting the list together of wonderful newspaper archives.
[NewspaperArchive.com](#) — (commercial) — Known for a large collection. I haven't used it, so I can't confirm this.
[xooxleanswers.com](#) — Great list of newspaper archives from Xooxle. Good list and a funky name. Two thumbs up.
[University of Penn Newspaper Archive](#) — List of US newspaper archives and dates. Looked like a deeper list of Texas newspapers, so this effort may be a deep comprehensive list.

Audio Books Online

[LibreVox.org](#) — Huge selection of audio recordings and AudioBooks read by volunteer voice artists

Business Deep Web Engines

[AAAAAgencySearch.com](#) — Advertising agencies via the American Association of Advertising Agencies.
[Agency ComFile](#) — Advertising and marketing agencies.
[Alibaba](#) — An international marketplace of businesses looking for businesses.
[Kompas](#) — Business to business search engine.
[GPO Access Economic Indicators](#) — Gateway for economic indicators from January 1998 to present.
[Government Printing Office](#) — Big catalog of stuff published by the Government Printing office. Has business stuff but much much more. Environmental reports, legal docs, nature stuff. Hell, I typed in 'mushroom' and pulled up 34 entries.
[Hoover's](#) — The Big Boy of info on businesses.
[ThomasNet](#) — Just an industrial product search directory.
[SBA Loan Data](#) — Loan program approval activity from the Small Business Administration.
[GuideStar.org](#) — A searchable database of non-profit organizations including 501c.

Consumer Engines

[US Consumer Products Safety Commission Recalled Products](#) — Listing of products, sortable by company name.
[Melissa Data](#) — Comprehensive directory of demographic data, sortable by ZIP code.
[Kelley Blue Book](#) — A guide to pricing new and used vehicles.
[Edmunds](#) — A recognized and established guide to pricing new and used vehicles.
[Consumer Reports](#) — (commercial) A trusted guide to product reviews, including autos, appliances, electronics, computers, personal finance, etc. I use it.

Economic and Job Search Engines

[EUROPA Press Release Database](#) — Database of press releases by the European Union.
[FreeLunch.com](#) — Directory of free economic data.
[Bureau of Labor Statistics](#) — Job-based and consumer economic info from the US Department of Labor.
[Salary Wizard Calculator](#) — Tools that shows national average salaries adjusted by location for different jobs.
[Economagic](#) — A data directory containing over 200,000 econ files.
[Penn World Tables](#) — National income data for all countries for the years 1950-2007.
[America's Job Bank](#) — Database of jobs and resumes.
[USAJOBS](#) — Portal of data on federal government jobs.

[Regional Economic Conditions \(RECON\)](#) — Economic data available by state, county, and MSA.

Finance

[Bankrate.com](#) — Database of interest rates for different loan types, mortgages, and savings accounts.
[InvestIQ](#) — Market data from around the world in regions.
[BigCharts](#) — Quotes and performance charts on different stocks and mutual funds.
[SmartMoney.com Tools](#) — A portal of for stock analysis tools.
[NASDAQ Trader](#) — A database of stock data from the NASDAQ stock exchange.
[SEC Info](#) — EDGAR and SEC filings searchable by name, industry, SIC code, etc.
[EDGAR Online](#) — SEC filings searchable by ticker or company name.

Government Search Engines

[Copyright Records \(LOCIS\)](#) — Online copyright records, documents, serials, and multimedia.
[American FactFinder](#) — Aggregate census bureau data to be searched by city, county, or ZIP code.
[FedStats](#) — Gateway for statistics on 100 US federal agencies.
[United States Patent and Trademark Office](#) — Database of patents, full-text and full-page images.
[Historical Census Browser](#) — Repository of historical US census data. Going back to 1790 compiled by the University of Virginia.
[Geospatial One Stop](#) — Awesome GIS data warehouse of geographic data, shapefiles, imagery, and displayable on maps.
[Grants.gov](#) — Grant opportunities, from everything under the sun.
[Technology Opportunities Program Grants Database](#) — Listing of technology grants, peruse by keyword, state, and year.
[United States Government Printing Office \(GPO\)](#) — I mentioned this earlier, they seem to have everything. A search engine for multiple government databases: US budgets, campaign reform hearings, code of federal regulations, congressional bills, etc
[CIA Electronic Reading Room](#) — The usual uninteresting declassified CIA documents.
[POW/MIA Databases and Documents](#) — Info on POWs and MIAs.
[ZIP+4 Lookup](#) — US ZIP codes and ZIP+4 codes

International Search Engines

[International Data Base \(IDB\)](#) — Statistical tables and demographic information for countries and areas.
[FIRST](#) — <http://first.sipri.org/> Military aggression database and weapons holdings.
[Economics of Tobacco Control](#) — Information regarding tobacco usage and policy for 180 countries.
[Country Indicators for Foreign Policy](#) — Statistical tables on countries' foreign policies.
[World Bank Data](#) — Key development data and statistics for countries and worldwide groups.
[CIA Factbook](#) — Reference materials containing information on every country in the world.
[US International Trade Statistics](#) — International trade statistics, by country or type of good.
[US Foreign Trade Highlights](#) — Information of US international trade.
[Energy Information Administration International Energy Data and Analysis](#) — Energy balances sorted by country. Explains why the US gives huge amounts of cash to oil producing countries.

Law and Politics

[THOMAS \(Library of Congress\)](#) — Legislative information from the Library of Congress.
[Law Library of Congress](#) — Allegedly, the largest collection of legal materials in the world, over 2 million volumes.
[Global Legal Information Network](#) — Laws, regulations, judicial decisions, and other legal sources.
[FindLaw](#) — Free legal database, with collections of cases and codes, legal news.
[Office of Postsecondary Education Security Statistics](#) — Contains college campus crime statistics, sortable.
[Bureau of Justice Statistics](#) — <http://bjs.ojp.usdoj.gov/> Legal and judicial statistics, everything from crime to law enforcement.
[The Avalon Project at Yale Law School](#) — Documents in law, history, and diplomacy.
[US Congressional Documents and Debates, 1774–1873 \(Library of Congress\)](#) — The historical Congressional records, bills, documents, statutes, journals, and debates from LOC.
[Lobbying Database](#) — Who spent what on firms who have spent lobbying money from 1998. The US, with the finest Congress money can buy!
[Legislative Activities](#) — Synopsis of House of Representatives' bill summary, status, public laws, and votes.
[heinsonline.org](#) — (commercial) — Claims to be the 'worlds largest image based database of legal documents'. I was able to find an obtuse document on using Bayes Theorem for fact finding in a criminal case.
[Project Vote Smart](#) — Government officials and election candidates database, order by last name or ZIP code.

Medical and Health

[PubMed](#) — The U.S. National Library of Medicine contains over 16 million citations from MEDLINE and other life science journals going back to the 1950s. Contains links to full-text articles and external resources. Supposed to be the best damn resource for medical out there.
[National Institute for Health Research Archive](#) — <http://www.nihr.ac.uk/Pages/NIHRArchive.aspx> Database of ongoing or completed projects funded by the British NHS.
[National Institutes of Health](#) — Encyclopedia of health topics. More of a kind-of-deep-web resource, as Google has this indexed.
[American Hospital Directory](#) — Index of US hospital information.
[Globalhealthfacts.org](#) — Searchable world health information, by country, disease, condition, program, or demographic. Quickly lay out the conditions in a country.
[Centers for Disease Control and Prevention Data and Statistics](#) — Statistical health information according to the CDC. Not true deep web, but useful.
[New England Journal of Medicine \(commercial\)](#) — A leading medical journal with full text past issues available online. Commercial, but you can access most for free.

Science and Academic

[\(Scholarly Paper search engines now have their own page\)](#)
[ScienceResearch.com](#) — Searchable access to scientific journals and databases.
[Academic Index](#) — Main search is a filtered Google search aimed at high authority rank sites, mainly .edu and .gov which filters a great deal out. Second search ties into deep web academic and non-academic databases skewed to librarians and educators.

[Science.gov](#) — Gateway to science info provided by US government agencies.
[VideoLectures.net](#) — Phenomenal video lecture coverage from high authority rank sources. A great go-to place to find peer-reviewed, conference presented, in depth coverage of a topic at a conference. A nice bonus, is the presentation slides are shown separately, and you can jump to slides of interest to you. Heavily technology based, and 66% is in English. Most lectures 45 minutes or longer.
[WebCASPAPAR](#) — A horrible interface to an alleged wealth of statistical info on science and engineering. I found the site slow, cludgy and designed around 1965 run off of candle power. From their website: "The WebCASPAPAR database provides easy access to a large body of statistical data resources for science and engineering (S&E) at U.S. academic institutions. WebCASPAPAR emphasizes S&E, but its data resources also provide information on non-S&E fields and higher education in general."
[The Complete Work of Charles Darwin](#) — Charles Darwin's published works, search-able and available online. He's still old and his works still ramble. Scanning didn't help him much.
[USGS Real-Time Water Data](#) — Real-time map of streamflow and water quality data of the USA's rivers and reservoirs.
[USGS Earthquake Hazards Program](#) — Showing real-time earthquake data. Focus on US but covers world as well.
[IEEE Publications \(Commercial\)](#) — Contains over 1.4 million documents from the Institute of Electronics and Electrical Engineers.
[Society of Petroleum Engineers Archive \(Commercial\)](#) — Petroleum engineers technical papers.
[Arxiv](#) — arxiv.org/ — Cornell University repository. Access to 700,000+ technical papers on everything from quantitative biology to computer science. Appears to offer full text in several formats.
VADLO — www.vadlo.com/ — (malware present as of 11/9/12) Life Science Search Engine. Very hit and miss. Don't have high expectations.
Deep Dyve **(Commercial)** — www.deepdyve.com
DeepDyve has aggregated millions of articles across [thousands of journals](#) from the world's leading [publishers](#), including *Springer*, *Nature Publishing Group*, *Wiley-Blackwell* and more. Haven't paid the premium to give it a test ride, if someone has, please write a review below.
[Data Mining Data sources](#) — <http://www.kdnuggets.com/datasets/index.html> — Links to gobs of free and commercial datasets used for data mining.

Transportation

[FAA Flight Delay Information](#) — A map of the United States with flight delay information from the nation's largest airports.
[NTSB Accident Database and Synopses](#) — The National Transportation Safety Board's database of aviation accidents, ranging from 1962 to present.
[NTSB Aviation Accident Database](#) — Aviation accident data from the National Transportation Safety Board
[National Highway Traffic Safety Administration](#) — A database of car and car part defects, searchable by item number or car make and model.
[SaferCar.gov](#) — Crash test safety ratings for automobiles since 1990.
[flightwise.com](#) — Real-time flight tracking, with support for Google Earth.
[FlightAware](#) — Fee flight tracking with history, graphs, and maps.

Tools For Communication Security

Duckduckgo bills itself as a search engine alternative to google. Back in April, the question was how a small company could compete with the google goliath. The CEO stated that it was because they do not track your searches or target with advertising, and because of that, the company has benefited since the NSA leak alerted Americans that the government was, in fact, collecting data. Since the NSA news broke, duckduckgo web traffic has surged 33%. The CEO, Gabe Weinberg, did not anticipate a traffic increase as a result of competitors giving information to the government? It has long been known that people didn't want tracked and so it's no surprise that people are making a choice to switch to things, **they can still get great results and also real privacy**. In a six-month period yahoo! said that they had 12,000 to 13,000 inquiries from the government, Apple, 4,000 to 5,000 inquiries, duckduckgo had zero inquiries, and the reason for that is that no data is stored. So if they come to us and they know it's in our privacy policy, we have nothing to handover. It's all anonymous data. So on big-tech companies and usually big companies in general, that information is stored in data warehouses and that's why it can be requested. With duckduckgo all information is literally thrown away. It never gets written into anywhere and never to disk. A lot of these companies, they're saving the data because they want to get advertising around that data. So how does duckduckgo make money? We don't need to track users to make money on web search, because it's based off the key word. You do mortgage research for your house; you type in mortgage bank rates and get a mortgage ad. We can do that without tracking. We have an ad on our site based on the keyword, not the person. To put it in perspective, it took 435 days to get from one to 2 million searches a day, and then only eight days to get from 2 million to 3 million, and all of them are new customers? I think people are out there having conversations with their friends and family and saying, hey, we don't want to be tracked. No one wants to be tracked. Why don't you try duckduckgo? You know, google is out there saying, look, we anonymize the information. They try not to give out the information and resist the government inquiries as much as possible but at the end of the day, if you have a valid court order, you have to do what it says.

How to Shield Your Calls, Chats, and Internet Browsing From Government Surveillance
http://www.slate.com/blogs/future_tense/2013/06/07/how_to_secure_and_encrypt_your_email_and_other_communications_from_prism.html

The Open Technology Fund has supported the development of tools that can be used for secure communication in the field. These tools include encrypted end-to-end cell phone conversations, encrypted text messaging, encrypted group chat and document sharing, anonymous communication on the Internet and secure instant messaging. We've created a short guide describing these tools, including available languages, use cases and where to access the tools for use today. You can download the May 2013 edition of the guide as a PDF document. [Download the Guide \[pdf\]](#)

Tools Included in the Guide

RedPhone is an Android app that secures your calls for free, with iOS support coming in the summer of 2013. RedPhone provides end-to-end encryption, securing your conversations so that nobody can listen in.

TextSecure is an Android app that secures your SMS/MMS communication, which encrypts your text messages in transit and on your phone. It's almost identical to your normal text messaging application, and is just as easy to use.

Cryptocat is an open, accessible instant messaging platform that encrypts your conversations right in your browser. Android and iOS apps are expected in the summer of 2013. Cryptocat aims to leverage both the ease of use and accessibility afforded by web applications and the security provided by client-side cryptography.

Orbot is an android application that allows mobile phone users to access the web, instant messaging and email without being monitored or blocked by their mobile internet service provider. Orbot brings the features and functionality of Tor to the Android mobile operating system. Tor prevents somebody

watching your Internet connection from learning what sites you visit, and it prevents the sites you visit from learning your physical location.

Orweb is an android application that works hand in hand with Orbot to provide web access that is able to circumvent web filters and firewalls, while also improving a users ability to remain anonymous online.

Gibberbot is an android application offering private, encrypted chat for Google, Facebook, AOL and any Jabber or XMPP server using true verifiable end-to-end encrypted communications.

ChatSecure is an iOS application that offers private, encrypted chat and instant messaging for Google, Facebook and any Jabber or XMPP server using true verifiable end-to-end encrypted communications.

Tor is free software and an open network that helps you defend against a form of network surveillance that threatens personal freedom and privacy, confidential business activities and relationships, and state security known as [traffic analysis](#) . [Download Tor](#)

BT Guard anonymous bittorrent services

Pretty Good Privacy (PGP) is a popular program used to [encrypt](#) and decrypt e-mail over the Internet. It can also be used to send an encrypted [digital signature](#) that lets the receiver verify the sender's identity and know that the message was not changed en route.

GnuPG is the GNU project's complete and free implementation of the OpenPGP standard as defined by RFC4880 . GnuPG allows you to encrypt and sign your data and communication, features a versatile key management system as well as access modules for all kinds of public key directories. GnuPG, also known as GPG, is a command line tool with features for easy integration with other applications. A wealth of frontend applications and libraries are available. Version 2 of GnuPG also provides support for S/MIME.

Cloudfogger encrypts your data on the local device before it gets uploaded to the cloud. That guarantees that Dropbox and others never get access to the content of your files. Cloudfogger protects your privacy with 256bit AES ([Advanced Encryption Standard](#)) encryption.

Dropbox to store private documents online.

Jitsi can be used for peer-to-peer encrypted video calls.

Silent Circle to make and receive encrypted calls and send encrypted texts and files, though your communications will be fully secure only if both parties to the call, text or file transfer are using the app.

The digital age has made it far trickier to thwart eavesdroppers who may be sitting at a desk thousands of miles away. But it can still be done. There are plenty of software tools anyone can use to keep prying marketers and hackers out of their business.

TrueCrypt: Security begins at home, and what's on your hard drive can say a lot about you -- and about everyone you know and communicate with. Encrypting the data on your computer's drive won't make it impossible (nothing is impossible), but it'll be extremely difficult for anyone to uncover what's stored there. TrueCrypt is free and can be used to encrypt an entire hard drive or a virtual disk to keep prying eyes out. For individual files, there's AxCrypt, which lets you encrypt and password-protected files with a click. It's great for sharing confidential documents, but you've also got to share the password.

Tor: Used by political activists and dissidents Tor is a free, open-source Web surfing program that runs in the background and hides your surfing habits and location. It accomplishes this by routing your connection through numerous nodes or hops, so it can also slow down your page views. On the other hand, it has proved adept at thwarting oppressive government officials. It has also been useful for

criminals delivering viruses, so much so that some security programs automatically tag Tor traffic as malware.

VPN: One way the authorities (and hackers) trace things back to you is using your IP (Internet Protocol) address, which ISPs are often forced to render to authorities. That's how law enforcement sometimes learns military generals have supposedly secret email accounts, which they can then subpoena without their knowledge. To prevent such traces you can use a VPN, or virtual private network service, to hide your IP address. It's the same sort of connection used by many corporations to prevent security breaches using encrypted tunneling, but you can use it to route your connections through a remote server, often in a different country, and thus thwart trackers. **Free VPN services include Private WiFi and proXPN.**

Google Voice: One of the disruptive technologies Google has introduced -- but not enough people use -- is an online phone service based on technology it acquired when it bought Grand Central. Google Voice is intended to provide a single phone number that you can then use to route calls to any other number (up to five at a time). It's also great at filtering calls, and because it's free, you can get a new number for special sources and then close it down, making it difficult for authorities to eavesdrop or even figure out who called who.

Burner: Based on the concept of so-called burner phones (cheap, temporary cell phones that have no identifying account information and are later thrown away), the Burner app for Android and iPhones generates a temporary phone number you can give out instead of your real number. When you're done, you simply delete the number and it's gone. It's not free, however. Getting a number that lasts a week with 20 minutes of talk time, for example, costs \$1.99. Is it foolproof? Probably not if the government is trying to track you, but it makes it darn difficult.

DeadDrop: Another tool that has been used in various guises by whistle-blowers is DeadDrop. It uses Tor and provides a place online where sources can anonymously post confidential documents and information for reporters (just like the physical dead drops of the spy-vs.-spy cold war). The New Yorker magazine recently publicly announced it would begin using the technology for its Strongbox service.

It should be noted that many of these techniques are used by terrorists and ordinary criminals today. Law enforcement will no doubt decry their use -- and continue to come up with ways to hack into these privacy tools.

SUSPICIOUS BEHAVIOR COULD INDICATE TERROR PLOTTING

By Anthony L. Kimery

' ... being able to distinguish the ordinary from the extraordinary'

Coinciding with concerns among some intelligence services that suspected Hezbollah "sleeper cells" in Canada have been activated, Canadian law enforcement authorities increasingly are training for spotting potentially suspicious activity and behavior that may indicate terrorists are conducting surveillance or other goings-on in preparation for targeting a specific structure or location for attack.

Several years ago, Robert David Steele, an outspoken veteran intelligence officer, told HSToday.us that "50 percent of the 'dots' that prevent the next 9/11 will come from bottom-up [local] level observation" and unconventional intelligence from "private sector parties."

Since 9/11, the Department of Homeland Security (DHS) and law enforcement in the Washington, DC capital region have actively urged citizens to report "suspicious activity." Mobile electronic signs urging people to report suspicious activity are routinely placed at strategic locations throughout the metro area for periods of time. The last one of these portable warnings I saw was at the convergence of Key Bridge and George Washington Memorial Parkway on the Virginia-side of the Potomac River just across from Georgetown.

Lynda Howes, a civilian member of the emergency event and management unit of the Calgary (Canada) Police Service, told attendees of the "Tri-lateral Security Conference" in Calgary last week that law enforcement must learn how terrorists operating in order to prevent attacks. She said counterterrorism is only manageable if it is tackled at the grass roots level. She explained that it's vital that everyone - including the public, the police, government and private industry – recognizes the potential indicators of terrorism and what actions to take if, and when, they are encountered.

Howes said terrorists must recruit members, research their targets, procure resources, receive, transfer and conceal money, and provide transportation and communication.

And "each one of those phases represents an activity" that can be identified if a person is trained to know what to be on the look-out for. "Those activities are associated with a behavior. Once we have that behavior, those are things you and I will be witnessing every single day and are things we can pick up on as potential indicators."

In late 2002, The Air Force's Office of Special Investigations launched "Eagle Eyes," a program to "deter terrorism by recognizing and reporting pre-attack activities," according to an OSI memo.

"Every terrorist act is preceded by observable planning activities," according to the OSI memo. "When troops and citizens know what to look for and how to report suspicious activity, terrorist acts can be prevented."

Department of Defense personnel have routinely been advised to report suspicious reconnoitering of military facilities, people asking detailed information about specific sites, and any other activity which could indicate a "dry run" attack.

DHS says "knowing what to look for and being able to distinguish the ordinary from the extraordinary are the key elements to successful surveillance detection."

"A persistent stream of reported suspicious incidents requires an understanding of the purpose of terrorist surveillance, to know what terrorists look for, and how they conduct surveillance operations," DHS's advice states.

DHS states "terrorists conduct surveillance to determine a target's suitability for attack by assessing the capabilities of existing security and discerning weaknesses in the facility. After identifying weaknesses, they plan their attack at the point of greatest vulnerability."

"Because terrorists must conduct surveillance-often over a period of weeks, months, or years-detection of their activities is possible," DHS continued, noting, "regardless of their level of expertise, terrorists invariably make mistakes. The emphasis of surveillance detection is to key in on indicators of terrorist surveillance activities."

DHS states "successful surveillance detection efforts require immediate reporting of incidents similar to the following:

- Multiple sightings of the same suspicious person, vehicle, or activity, separated by time, distance, or direction;
- Individuals who stay at bus or train stops for extended periods while buses and trains come and go;
- Individuals who carry on long conversations on pay or cellular telephones;

- Individuals who order food at a restaurant and leave before the food arrives or who order without eating;
- Joggers who stand and stretch for an inordinate amount of time;
- Individuals sitting in a parked car for an extended period of time;
- Individuals who don't fit into the surrounding environment because they are wearing improper attire for the location or season;
- Individuals drawing pictures or taking notes in an area not normally of interest to a tourist or showing unusual interest in or photographing security cameras, guard locations, or watching security reaction drills and procedures; and
- Individuals who exhibit suspicious behavior, such as staring or quickly looking away from individuals or vehicles as they enter or leave facilities or parking areas

Other activity which should cause a heightened sense of suspicion include:

- Suspicious or unusual interest;
- Surveillance (suspicious in nature);
- Inappropriate photographs or videos;
- Note-taking;
- Drawing of diagrams;
- Annotating maps; and
- Using binoculars or night vision devices

"Terrorists may also employ aggressive surveillance techniques, such as making false phone threats, approaching security checkpoints to ask for directions, or 'innocently' attempting to smuggle nonlethal contraband through checkpoints," DHS's advice states. "The terrorists intend to determine firsthand the effectiveness of search procedures and to gauge the alertness and reaction of security personnel."

Karen Morley, senior director of TerraGo Technologies, Atlanta, Ga., who began her career in the geospatial industry in the US Air Force as a target intelligence specialist, told HSToday.us that terrorists need to conduct careful surveillance of a potential target in order to be confident that they can pull off a successful attack.

In 2004, RAND developed the book, "[*Mapping the Risks: Assessing Homeland Security Implications of Publicly Available Geospatial Information*](#)," for the National Geospatial-Intelligence Agency, determined that "potential attackers, such as terrorist groups or hostile governments, are more likely to [utilize] reliable and timely information ... such as through direct access or observation. In addition, many types of attacks, such as those by ground parties, are likely to require detailed information for attack planning purposes (depending on the target type and mode of attack). This type of information, which mostly comes from such nongeospatial sources as engineering textbooks or human expertise on the operations of a particular type of industrial complex, is essential for attackers to have a high confidence in their plan."

But according to John Bumgarner, an 18-year veteran of special operations who has worked with most of the three-letter intelligence agencies at one time or another and is now research director for security technology at the US Cyber Consequences Unit, a non-profit research institute, because of training like that promoted by Howes it has become more and more difficult for terrorists to physically recon targets, especially in the US.

"To actually start planning very detailed reconnaissance of a building, and all the streets that go into it, and all the alleyways and everything else, that could require a lot of physical reconnaissance on the ground - it's not something that you can actually just easily do anymore," Bumgarner stressed, especially in the post-9/11 environment where conspicuous photographing, videoing and other apparent physical surveillance can, and has - repeatedly across the nation - caused people to be detained and questioned about their activities.

"In other words," said Bumgarner, "it's gotten a whole lot harder for a terrorist to conduct the kind of conspicuous physical surveillance of a target that's necessary for conducting a large-scale or mass casualty attack."

Consequently, more sophisticated terrorists are utilizing easily accessible geospatial information, which was examined in the April *HSToday* cover report, "[*Every Eye a Spy*](#)."

Taking Advantage Of Search Engines To Do Your Work

My favorite search engines, and I'm sure you have your favorites, are the Copernic Suite followed by Google and then others. I use them extensively and use them to my advantage when doing research and I just don't have the time to sit in front of the computer and type in all the keywords. First let me start with the Copernic Suite. It is comprised of [Copernic Agent Professional](#), [Copernic Tracker](#) and [Copernic Summarizer](#). Tracker and summarizer are exactly what the titles imply. The tracker keeps track of websites and alerts you when there are changes to it. Summarizer will take an article and summarize it to a more manageable article; and you determine the number of words in the summarized article. The following applies to copernic agent professional and how to customize it to work for you.

You'll notice on the graphic below how I have formatted my copy. On the right side is a box where folders are created as I have done. In the top center are the keywords I used for the Iran folder in the box at right. I have programmed the engine to do automatic searches at 0800 every day (by this time I have had my first cup of coffee and just waiting for all the results to come in). You also will notice that on the search term "Iranian military capabilities" there is a number 24 in parenthesis. These are the new results that came in at 0800, so you will always know about new results. Just below the box with the keywords are all the hits that came in. The green check mark indicates that it is a valid link. Now look at the left hand side in the quick search box and you should notice that I have 1005 search engines enabled. With these many search engines enabled you should be able to pin down what you're looking for.

The screenshot displays the Copernic Suite software interface. At the top, there's a menu bar with 'Favorites', 'Tools', 'Window', and 'Help'. Below it is a toolbar with icons for 'Find in Results', 'Browse', 'Summarize', and others. A 'Folders' panel on the right lists various categories like 'Africa', 'Al Qaeda', 'Drug War', 'HUMINT', 'IEDs and EFPs', 'IMINT', 'Iran', 'MASINT', 'OSINT', and 'SIGINT'. The 'Iran' folder is selected. The main window shows a table of search results for the keyword 'iranian military capabilities'. The table has columns for the search term, the type of search (Exact phrase, Terrorism, The Web), the number of results, and the date/time. The results are sorted by 'Update Date'. The first result is 'iranian military weapons' with 68 results, dated 8/30/2007 1:23:45 PM. The second is 'iranian websites' with 303 results, dated 8/30/2007 1:38:06 PM. The third is 'iranian naval capabilities' with 23 results, dated 8/31/2007 8:19:34 AM. The fourth is 'iranian military capabilities' with 40 results (24 new), dated 8/31/2007 8:19:48 AM. A 'Quick Search' panel on the left shows a search for 'iranian military capabilities' with 1005 engines enabled. A 'Common Tasks' panel at the bottom left lists tasks like 'Create new search', 'Analyze results', 'Browse results', 'Filter results', and 'Organize categories'. The main search results area shows a list of links with green checkmarks indicating valid links. The links include 'USPACOM Speeches and Transcripts', 'Iran Navy', 'NAVAL POSTGRADUATE SCHOOL', 'Maritime Interdiction in the Gulf', and 'Fundamentals of Operational Warfighting'. Each link is accompanied by a percentage indicating its relevance (81%, 80%, 79%, 77%, and 72% respectively).

Search Term	Search Type	Results	Date/Time

Let's now look at Google and see how it can be customized to work for you. What you're looking at now is the traditional page. On the upper right is the "sign in" link. Click on this link to establish an account. Once you establish an account click on the news link to go to the personalized news page.

Clicking on the news link brings up the following page. You'll notice on the left hand side where I have established all keywords of interest to me. I have included all the classical "INTS" along with some others of interest. Clicking on a keyword, for example "explosively formed projectiles", brings up the latest search on that term. I use the same keywords in Copernic above because the results are not always the same for both search engines. By using two search engines to do my bidding I stand a better chance of getting a plethora of results and thus more solid news from around the world.

Tricks Of The Trade For The Open Source Analyst
Looking For Old Information
By Etan Horowitz
The Orlando (Fla.) Sentinel

Things move so fast on the Internet that sometimes the information you are looking for has been removed or changed. Using Google's Cached Links and the Internet Archive's Wayback Machine can help you find what you are looking for even if the content is no longer online.

1. If you know that the information you are searching for is no longer online, go to Google.com.
2. Enter as much information as you can into Google's search field and hit enter.
3. When your search results appear, find the result with the most appropriate description and click on the link at the bottom left of the result that says "Cached." This will open a snapshot of the Web page that Google took as it was indexing it.

Clicking on the cached link may also be useful if you ever click on a search result link that doesn't work.

4. If you don't know exactly what you are looking for or are curious about a previous version of a Web page, go to web.archive.org to search the Internet Archive's Wayback Machine, an archive of 85 billion Web pages dating back to 1996.
5. Type the URL of the Web site you want to see and click "Take Me Back." This will bring up a collection of archived pages from that Web site, organized by year.

Cached Links may not be available for all Web sites and less popular Web sites may not be included in the Internet Archive Wayback Machine.

Recommended Search Tips

* * * Google Can Do That? * * *

* Google lets you search for a range of numbers, in any format. To include a number range in your search query, type in the lower and upper numbers, separated by two periods - e.g., 15..50 I had a chance to try out this feature in a real-life search; I wanted to find a set of wireless headphones on Amazon.com costing between \$50 and \$100. I typed in the query (wireless OR cordless) headphones \$50..\$99 site:amazon.com and, sure enough, I retrieved a wide selection of wireless headphones within my price range.

Note that Google is smart enough to recognize decimal points - some of the items I retrieved weren't an even dollar amount but were, for example, \$57.83. This feature could also come in handy if you are looking for a mention of a range of years.

* Speaking of date-searching on Google, you can limit your search to only those pages added or changed within the past [whatever] days. This can be a useful feature if you re-run a search regularly; just limit your search to the pages added or modified since you last ran your search. You can do this not by adding text in the search box but by modifying the search results page URL by adding the following text to the end of the URL and clicking [Search]: &as_qdr=dn (where n is the number of days you want searched) So, for example, to limit my search to the last 18 days, I would add &as_qdr=d18 to the end of the search results page URL.

Keep in mind that this isn't a perfect date-limiting search. Some web content management systems automatically refresh a web page frequently, without necessarily making any changes to the page. Those pages will have a recent date but the content within them may have been unchanged for months.

* If you are based in the US, you can search for local companies through your cell phone, regardless of whether or not your phone has web capability. If you call 1-800-GOOG411 (1-800-466-4411), you will be asked to say the city and state you want information on - Boulder, Colorado, for example - then you say the type of business or specific business name you want - for example, "book store" or "Barnes and Noble". A text-to-speech program will read you the top eight results from its local search (<http://local.google.com>). If you want, Google can automatically dial any of the first eight businesses' phone number, or you can ask to have the address and phone number read to you.

You can also get quick answers to simple queries by texting Google from a US cell phone. Send a text message to 466 453 (GOOGLE) and then type your query in the text box and send it. Within seconds, you will receive a text message with one of Google's Quick Answers. The default is for Google to take your query and attempt to find a Quick Answer. If you want a search of the web, put the word web at the beginning of your search, such as web avian flu. This will return you a text message with a snippet of the first search result, along with a link to mobile-formatted page of the search results. See <http://sms.google.com> for more information on this service.

I recently discovered [Intelways](#), a nifty way to search a number of search engines sequentially. It's not a metasearch engine; it lets you click from one resource to another. Its main claim to fame is that it categorizes the tools by broad type of search -- general, images, video, news, social (blogs, social networking sites, social bookmarking sites, etc.), file-type searching, reference, academic, business, tech and (natch) shopping. PowerSet.com

We have a new player in the semantic search arena; "semantic search" refers to the idea that a better way to find the most relevant material is to not just look at word frequency, location, links to a page and so on but to understand the sense of what is being asked and the sense of what is on web pages, and then to match the most applicable pages. For example, if I typed in a query for *stock*, a semantic search engine would see that this was in the context of livestock, and would find other pages that have to do with animals on farms rather than about shares of ownership in a company, flowers, or racing cars.

[PowerSet](#) uses a technology that attempts to mine meaning out of web pages -- specifically, [Wikipedia](#) articles. This isn't a general-purpose search engine, but it is a tremendous tool if you are looking for information on a subject that spans a number of Wikipedia articles, or that has a number of meanings. Take "Barack Obama" as an example. There are [thousands of articles](#) that mention Obama -- the Wikipedia article specifically about him, as well as articles about politicians who have endorsed him, his early career, the roles of race and religion in the US presidential campaign, and so on.

Rather than going through all of those entries, including the extensive article specifically on Obama, head over to PowerSet and you will get a [single search result](#) that pulls together what it judges to be the most relevant information about Barack Obama. There is a nice summary of who he is, the key facts about his career, and a relevance-ranked list of Wikipedia pages that mention him.

What I find particularly interesting is the "Factz" section of the page, which attempts to pull together *significant statements about* Barack Obama in the Wikipedia articles. So, for example, the Factz for Barack Obama include information that he introduced the following pieces of legislation:

- Iraq War De-Escalation Act of 2007
- Response Act
- Pandemic Preparedness
- Transparency Act
- Federal Funding Accountability

While that isn't a comprehensive list of the pieces of legislation he has introduced, these are probably the most significant ones, since this list includes only legislation that was mentioned in Wikipedia articles.

PowerSet is best used for those searches that cover a number of topics or areas. It's not perfect, and it only searches Wikipedia, but I find it an exciting new approach in the efforts of search engines to make sense out of web content. www.BatesInfo.com/tip.html

Bing Gets Smart

Bing, the search engine formerly known as Microsoft Live Search, has surfaced a number of its advanced search commands. Some of these are new, some simply haven't been publicized. You can see some of Bing's features in its Advanced Operator Reference, a minimalist page that lists operators and, with another click, gives a brief description and example of when the operator could be used.

Following are a list of four Bing commands:

- **Contains:** specifies that any page retrieved has links to specific file types. Syntax is `contains:files_type` Example: `apiculture contains:ppt` This is not a search within pages of those file types; the example here is looking for pages that both contain the word "apiculture" and have links to files with the .ppt extension. Other file type extensions you can search for include doc, pdf, ppt, rtf, txt and xls.
- **HasFeed:** specifies that any page retrieved has a link to an RSS feed on the page. Syntax is `feed:` Example: `apiculture hasfeed:` As with the `contains:` command, this isn't searching within RSS feeds; this search finds pages with RSS feeds on them.
- **LinkFromDomain:** identifies all the outgoing links on a specific domain, optionally limited to a particular topic. Syntax is `linkfromdomain:a_domain_name` To find some tutorials on renewable energy, for example, you might search for pages that are linked-to from HowStuffWorks.com and that also have the phrase "renewable energy" -- `linkfromdomain:howstuffworks.com "renewable energy"`.
- **Norelax:** lets you specify that all your search terms, not just the first four, be included in the query. Syntax is `norelax:search_word` Use this operator to indicate to Bing that all words in your query must be weighted equally. This tells Bing not to "relax" its Boolean AND for the fifth and subsequent words in a query. If, for example, you are creating a more complex query and want to ensure that Bing treats all words as mandatory, you could search "west nile" mosquito non-toxic `norelax:spraying`, using `norelax:` to make the search word `spraying` mandatory.

Using Yahoo to Brainstorm

Yahoo! has an experimental service called Correlator, part of its Sandbox area where Yahoo tries out new ideas. This particular demonstration is useful for research brainstorming; it gives you information -- not just search results -- that can help you get a better sense of the various aspects of an idea.

At its core, Correlator is a sophisticated tool for mining Wikipedia; its default search results page groups Wikipedia snippets by category. The search query "lithium ion batteries", for example, gives me information organized into areas such as rechargeable batteries, electric vehicles, and electric batteries. But what's more interesting is that below the search box are icons for Names, Places, Events, Concepts, News and Answers.

When I click the Names icon, the result is a dynamic word cloud and list of frequently-occurring names (geographic, personal, company, etc.) related to lithium ion batteries.

Clicking the Places icon displays a map of the world, with flags in areas that are significant in the context of lithium batteries, such as China (manufacturing), Austin (research and development), and Chicago and Japan (which both have tests of lithium battery-powered vehicles). This alone gives me ideas on where to look next -- local Chicago and Japanese papers, for example, if I want to know what is past the drawing board stage.

The Events icon displays a time line of events, again culled from Wikipedia, pertaining to Li-ion batteries. This helps me see, among other things, the speed with which Li-ion batteries have been incorporated into various devices. The News icon produces snippets from 20 or so recent stories in Yahoo News on the batteries. Clicking the Answers icon runs my query in the Yahoo Answers database; since Yahoo Answers tends to be consumer-oriented, the results help me identify the most common consumer concerns regarding batteries. The Concepts icon produces another dynamic word cloud and list of key words and phrases from the relevant Wikipedia articles. Of all the icons, this is the most variable in terms of usefulness.

While limited to Wikipedia results, I have found Yahoo Correlator to be a quick way to see the wide range of possibilities for me to explore with a new concept.

Killing Time (only on launch/lunch breaks)

Note: this game does not exist any longer on the current web page, however, the wayback machine still has a stored copy at the following site.
